These are a few of the simpler tests for determining the purity of linseed oils, and any one of them, if carefully followed out, will prevent a dealer from stocking an adulterated oil very inferior in quality and unsuitable for mixing with the other ingredients used to manufacture pure paint. It will pay the dealer when offered linseed at a quotation below the value quoted on the market, to test very carefully and to promptly reject any oil not conforming to the standard.

SOME THINGS TO KNOW.

In handling house paints, the dealer can avoid much trouble, do away with countless "kicks" from irate customers, and do much toward popularizing the brand of house paint he sells by informing himself in regard to the surfaces upon which the paint is to be applied.

Paint must have a clean, dry surface to adhere to. If applied over old paint that is blistered or is scaling and peeling off, it cannot be expected to hold. The old paint comes off and carries the new paint with it. This is the cause of more complaints and trouble than any other.

In repairing an old house, the first requisite for a successful job is to remove every particle of loose, scaly paint with scraper or wire brush. As a general proposition, two coats should be applied on old work, for the reason that the old paint absorbs so much oil from the first coat that sufficient is not left on the surface to insure durability and weather-resisting qualities.

On new work these coats should be applied to secure the maximum wear.

Paint should never be applied on damp lumber or in damp weather. The chances are that it will blister and peel off, because the moisture in the wood will be drawn out by the sun and will force the paint off as it comes out.

Be careful to caution customers to follow directions as to thinning, and applying house paint. If this is done, the dealer's troubles are "nil."

Another thing is to see that each coat of paint is dry all the way through before applying next.

There are "seasonable goods" in paints as in other lines. The progressive dealer will recognize the benefit derived by bringing such goods to the front and pushing them.

WALL BROS., BLEURY ST., MONTREAL, PROBABLY THE LARGEST RETAILERS OF PAINTING MATERIAL IN THE CITY OF MONTREAL, SAY: "OUR CUSTOMERS SEEM TO BE DRAWN TO OUR STORE TO PURCHASE THE CANADA PAINT COMPANY'S COLORS AND VARNISHES BY AN IRRESISTIBLE MAGNETISM."

EVERY SATISFIED CUSTOMER

comes back again and again to your store. That's the biggest "ad" you have. No newspaper, no talk, no anything can bring you similar results.

To satisfy—you must have the goods. Are you sure you have them. Let

RAMSAYS' PAINTS

demonstrate just what we mean. We have the goods. You can have them for the fair price you must pay for the proper quality. Let us tell you about it.

Have you received our new 1908 Catalogue? It's worth having. Drop us a card.

A High Grade Paint at a Moderate Price

is undoubtedly a boon to the hardware trade. We set ourselves the task of producing it, and the result is

MOORE'S
Pure Linseed Oil H. C. PAINT

We put the money, which we might have spent in extensive advertising, into the paint; and we can therefore truthfully tell you that no other prepared paint on the market at any price, can vie with it for covering capacity and durability.

ALABASTINE

is the only Wall Coating, which is extensively and persistently advertised to the general public and is what the people call for when they want anything in the line.

No persuasive argument is required from the dealer to sell it. People know its merits and ask for it because it is ALABASTINE THEY WANT.

A well-selected stock of ALABASTINE is "as good as the wheat," for repeat sales are invariably the rule once the customer uses it.

Our publicity campaign for 1903 is sure to more than double the already large trade for ALABASTINE.

Our illustrated Catalogue, "HOMES, HEALTHFUL AND BEAUTIFUL," handsome Counter Show Card, Cloth Banners, Tint Cards and other literature, which we supply liberally with every shipment of ALABASTINE help the dealer to create new trade.

The new two-sheet Poster showing an enlargement of the illustration of the Dining Room in "HOMES, HEALTHFUL AND BEAUTIFUL," which we propose posting in large numbers on all the Bill Boards in Canada during the Housecleaning Season will be a "SURE WINNER."

Get ready to supply the large and growing demand for ALABASTINE by ordering a full assortment either direct or through your nearest Jobber and DO IT NOW.

The Alabastine Co., Limited, - Paris, Ont.

Secrets of Success
Publicity-Popularity-Profit

The publicity given **Martin-Senour Paint** by its makers is a great factor in producing its wide-spread popularity. We are constantly advertising it in various ways. We are aiding our dealers by that most practical of all business methods—persistent advertising. The

CURRENT MARKET QUOTATIONS.

February 7, 1908

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

Mistakes and Neglected Opportunities

MATERIALLY REDUCE THE PROFITS OF EVERY BUSINESS

Mistakes are sometimes excusable but there is no reason why you should not handle Paterson's Wire Edged Ready Roofing, Building Papers and Roofing Felts. A consumer who has once used Paterson's "Red Star" "Anchor" and "O.K." Brands won't take any other kind without a lot of coaxing, and that means loss of time and popularity to you.

"Seeing is Believing"

¶ As the Ross Sporting Rifle represents the best in modern rifle manufacture, the highest grade materials and minute accuracy in workmanship, it is to your interest to learn fully about this Canadian Rifle—

¶ The Ross Straight Pull 303 Sporting Model M is one of our leaders to retail at $26. The barrel is the celebrated Ross high pressure, non-fouling, gun-barrel steel — The breech action is dependable.

Our representatives are now demonstrating the merits of this rifle—It places you under no obligation to drop us a line to make sure you will be on their calling list.

Our advertising policy is co-operative.

Something You Ought to Be Selling

New Century Style "B"

The New Century method of washing has succeeded, not because of its ease, speed and simplicity only, but because it gives better results than are possible with any other method.

This machine has a wringer stand too, not a rickety affair, but a convenient, strong, rigid attachment, always in position, never in the way.

The experience is in the machine. You'll hear no complaints of it and have no excuses to make.

They are the best there is.

Dealers, don't load up with experiments, it is a losing game

CATALOGUES ON REQUEST

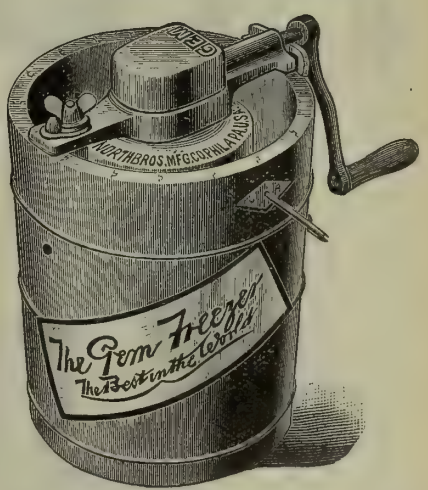
American Twin Freezer

Freezes two flavors of Ice Cream or an Ice or Sherbet and Ice Cream at one and same time, in one freezer.

SOMETHING ENTIRELY NEW —NEVER DONE BEFORE.

THE can is divided in two parts by a vertical partition. One flavor is placed in one, the other in opposite side of can, in each of which the scrapers, etc., operate. The can cannot be turned as in old style freezers, because of the partition. It is therefore swung to and fro by a rocking motion of the crank. This is a more comfortable and much easier movement. It is very much less tiresome than turning a crank. One can sit back in a chair with freezer alongside and rock the crank to and fro without discomfort or undue exertion and even read at same time. Although two flavors are frozen at once and with less exertion, no more time is required than in old style freezers.

The **Pails have electric welded wire hoops,** which are guaranteed not to break or fall off; Cans are of heavy tinplate with **drawn steel bottoms** that are guaranteed not to fall out or break and do not leak, the strongest and most durable Freezer Can made; the **Automatic Twin Scrapers** by their positive action insure perfect scraping of frozen particles from side of can. All inside parts are heavily coated with pure block tin, and outside parts all thoroughly galvanized.



SOLD BY LEADING JOBBERS

Send for Catalog.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines These enquiries come from Wholesalers, Manufacturers and Retail Dealers, who usually intimate they have looked through Hardware and Metal, but cannot find any firm advertising the line in question. In the majority of cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay them to advertise in larger space.

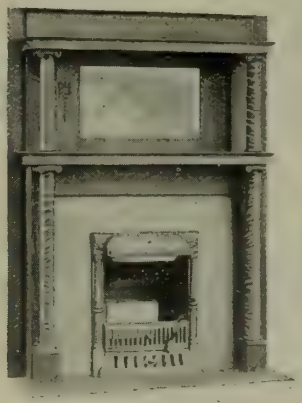
DAVIDSON GEM OIL TANK

(IMPROVED STYLE)

Size: 5 Gallons

Body galvanized after being made up **Fitted with special dripless kerosene tap**



The advantage of the Tank is that it can be carried upright in a waggon or otherwise, and the tap being then on the top is not in the way. There is therefore no risk of the tap being accidentally opened or knocked off and the oil spilt.

Placed on its side (as illustrated), on table or shelf, at convenient height, it is always ready for use, and makes the filling of lamps an easy task.

NOTE.—For this very original Oil Tank we have created a general demand, and any imitations we take as the sincerest flattery.

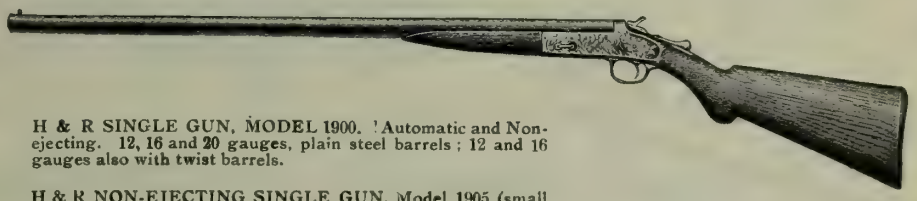
H&R GUNS AND REVOLVERS

are profitable articles for you to handle, Mr. Dealer, because of the extensive advertising and the absolute satisfaction they have given to discriminating purchasers for over thirty-five years.

We are constantly impressing upon the mind of the public—your customers—the superiority of H & R Guns and Revolvers—the simplicity of construction, accurate and reliable shooting qualities, perfect balance and beautiful finish.

Our catalogue tells about our full line and gives valuable selling points.



WRITE FOR IT.

Here is the New Target Grip

The realization of a long-felt want. Light, compact, durable—the first combination of a medium-priced revolver with a perfect full grip. The extension hard rubber stock affords a perfect grip. It is fitted to the frame, and by having the regular stocks (furnished extra) can be interchanged for pocket use.

Our new grip prevents slipping and twisting, insures a positively secure hold, because it fits the hand naturally, insuring confidence, which means a steadier aim and greater accuracy in shooting.

H & R SINGLE GUN, MODEL 1900. Automatic and Non-ejecting. 12, 16 and 20 gauges, plain steel barrels; 12 and 16 gauges also with twist barrels.

H & R NON-EJECTING SINGLE GUN, Model 1905 (small frame). 28 gauge, 44 and 45 calibers, plain steel barrels.

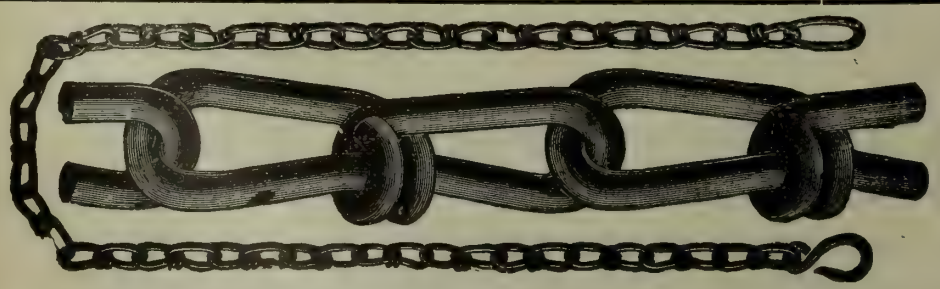
Three New "Starr" Skates

The New Things For This Year

This year we are making three new patterns of skates. The first is a New Boys' Hockey skate which promises to be very popular. The second is a new welded and tempered skate for hockey use. This is called the "Scotia". Selling at a very low price and being made of a good quality of material it will at once appeal to those whose means will not allow them to purchase the "Regal" or "Velox" or "Mic-Mac" Skates. The third is our new "Starr" Figure skate which we have introduced to meet an increasingly large demand. In the next three issues of this periodical we will further illustrate the merits of these new skates.



Our Mr. J. S. Bowbanks is now visiting the trade in Ontario and the West. Those of our customers who have not already placed their orders would confer a favor by waiting until Mr. Bowbanks calls, which will be soon.

IMPORTANT TO FARMERS

Your fences are your fortress against loss and damage. They must be strong enough to resist invasion from without, and to keep within bounds your flocks and herds. You can't afford to take chances on soft, slack, or brittle wire fences, which may fail just when most needed.

Peerless Woven Wire Fence

has the elastic springiness and resisting qualities that make an A 1 farm fence. Once up it lasts—no breaking—no falling down. There are reasons why. We can't tell them all in this ad, but if you will write to us we will send you some valuable fence facts.

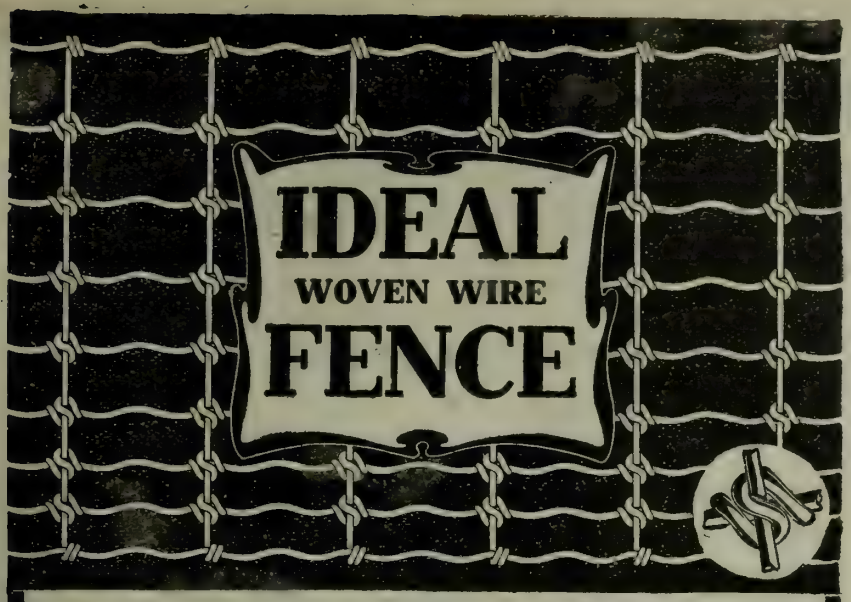
Good Tools and Modern Methods

will enable you to meet the keenest competition.
If you find your competitor is cutting under your prices, do not jump to the conclusion he is losing money; he may be using more modern tools and time-saving methods, and it is just possible he is making more money than you are. Every issue of



Plumber and Steamfitter of Canada

contains suggestions and ideas which have been tried out and found successful, and which it would pay you to adopt. New tools are described and an unprejudiced opinion given by our Editors as to the advantages to be gained by using them.

Published twice a month. Subscription price $1.00 per year. If you are a subscriber of Hardware and Metal you can secure the paper for 50c. per year.

Plumber and Steamfitter of Canada

MONTREAL TORONTO WINNIPEG

Why not sell a fence that will advertise your business? Ideal Fence makes people stop and take notice, and it stands inspection.

Ideal is the standard Farm and Railroad Fence of Canada. Big, strong wires—all No. 9,—heavily galvanized and firmly locked. See how the patent lock grips uprights and horizontals together at every crossing. No chance for slips. Wires are gripped on five bearing points.

Good margin in Ideal. We want one live man in every locality. Write for catalog and Dealer's Terms.

PROTECTION and SECURITY

For the Dealer Protection, For the Purchaser Security.

This is our 1908 program. Our Dealers in 1907 secured their choice of the Largest and Best Business. We do not worry about where they stand, but we fear that some Good Merchants do not know what great assistance we can and do give our friends. We are the Originators of the Protection Plan. Because it is a success, we of course have many imitators, but our Goods and Methods cannot be duplicated.

There will be much farm building done in 1908, by present indications. Get in line to look after your share. The best and surest way is to get in touch with us. A post card will do it.

"Sure-Grip" Shingles and "Galt" Corrugated Sheets combined with Galt Salesmen and Galt Methods will work wonders.

Announcement

¶ We wish to say to the trade of Canada that our new factory at Welland, Ontario, is now in full operation, and that we are in position to promptly care for all the requirements of our present customers, and also to extend our relations to include all those buyers who appreciate the satisfaction and economy in buying and using high grade cordage.

¶ We make but one grade (the best) in both Manila and Sisal rope, and the ship trade mark on the coil gives the buyer a sure way of avoiding any uncertainty as to the quality.

¶ This is of interest to every dealer who handles rope and every user, however small, as our policy of making one grade (the best) is based upon the idea of "giving the most for your money" whether you buy fifty feet of rope or five thousand.

¶ Buyers wishing to receive our literature, samples of Plymouth goods, or the attention of our representatives, should advise our Canadian sales office promptly. No obligation involved in so doing.

Ontario Retail Hardware Convention

Largely attended gathering thoroughly representative of the trade throughout Ontario — About eighty members present — Largest convention in history of Association — New officers representative of large cities as well as smaller towns—The "Question Box" a decided success — Membership increases about 100 during year.

It wasn't a step forward that Ontario Retail Hardware and Stove Dealers Associations made this year. A step doesn't express the idea at all. It was more than a step, a jump forward in fact, the jump being made not only in the number of names on the membership roll and in the increased attendance at the convention, but also in the interest taken at the meetings and the class of men who manifested this interest in the convention's doings.

During the first two years of the association's existence the work was largely done and the conventions were chiefly attended by hardwaremen from the smaller places, the towns and villages. Successful retailers they were and far seeing in their desire to help organize the trade. Every credit is due them for their pioneer work. But no organization can succeed that does not comprise in its membership and win the active support of the men with the larger interests in the cities. This has been realized by the executive officers and they have striven to build an organization deserving of the support of every branch of the trade and that they have succeeded was plainly evident at this year's convention. The "big" men (some of them at least) were there and they showed by their actions that they enjoyed the convention and realized their duty to the organization as much as those who had first put their shoulder to the wheel. As was said at the banquet, the association train has crossed the trestle and landed safely on the other side of the canyon.

The business sessions, the "question box" discussions, the presence of the fraternal delegate from Michigan, the election of officers, the reports of the officers and committees in fact the entire convention showed a decided advance over previous years. The association is now out of its kindergarten stage. It is a fixture and with careful leadership and the support of those who it aims to benefit, the organization has a bright future and will become a power for the good of all in the trade.

Just one word of caution: the men who have dug the foundation must not consider their work done. They must act as building inspectors in the future and see that the structure reared on the foundation is of a permanent character. Some able men who did good work on the executive committee during the past two years have stepped back into the ranks in order to give others an opportunity to carry on the work. One of the vice-presidents even wanted to retire but the general protest forced him to again give his services to the executive committee.

The new executive is a strong one, the officers represent the various sections of the province and are within easy reach of the executive centre. The finances of the association are in good shape. The new year begins with the association's prestige greatly strengthened. Everything favors an even greater advance in 1908 than in 1907 and if the men in the trade not now on the membership roll realize the possibilities of the organization now available to work in their interest the coming year will see another hundred or so names added to the list and a convention in 1909 that will crowd a larger hall than was secured for this convention.

OFFICERS FOR 1908.

President — J. R. Hambly, Barrie.

EXECUTIVE COMMITTEE.

The executive committee met at 10.30, those present being Messrs. Scott, Hambly, Peart, Binns, Becker, Taylor, Caslor and Wrigley. Mr. Wright, vice-president of the Michigan Retail Hardware Association, was also on hand.

The various matters before the executive were taken up and a report prepared for the convention.

Messrs. Peart, Binns and Wrigley were appointed a committee to see the insurance brokers regarding the profit-sharing plan of fire insurance under consideration.

A deputation representing Hamilton wholesale and manufacturing hardware concerns, consisting of Messrs. H. T. Eager, W. G. Colville, and E. Fielding, jr., interviewed the executive and extended a warm invitation to have the association hold its next annual convention in Hamilton. After discussing the matter the executive decided to recommend in favor of accepting the invitation.

The executive adjourned at 12.30.

THE CONVENTION.

President Scott called the convention to order at 2 o'clock. After expressing his pleasure at seeing so many new faces present. This indicated, he said, that the association was making progress. A year ago the membership roll had consisted of 150 members, and it now stood at about 225—a 50 per cent. gain during the year. (Applause). He trusted that the new members would add new vigor and make the association even more valuable to the members than in the past.

President Scott referred to the work of the collection department, as being a big factor in developing a well-satisfied membership, and making the present convention the largest in the history of the association. He would suggest the addition to the collection department of a feature of keeping track of delinquents, lists of "bad pays" being supplied the members from time to time.

Speaking of the Association's relations with the jobbers and manufacturers, Mr. Scott said that they were at present very satisfactory, few complaints of unfair actions having been reported. The very fact that the Association has come into existence, and is winning all branches of the trade, has eliminated much of the selling to consumers, which formerly existed. "At first the men who sell to us," said Mr. Scott, "laughed at our organization. Then they took half-hearted notice of us, but now they respect us, as was evidenced by their resolution of endorsation at the Montreal convention of the Canadian Wholesale Hardware Association last September." A brief report of his visit to this gathering Mr. Scott gave the delegates. Reference was also made to the action of H. S. Howland, Sons & Co., in tendering the Association a dinner this year, and the invitation of Wood-Vallance & Co. to visit Hamilton next year. Both these incidents went to show that the jobbing houses now hold the Association in respect.

Dealing with the future of the Association, President Scott referred to the necessity of watching matters of legislation closely, and urged that in the election of officers for the coming year, a larger representation be given to the trade in the towns and cities. He also favored the admission of travelers to honorary membership in the Association. He thanked the Executive for their support during the year, and gave credit to Hardware and Metal for assisting in the work of organization. "Hardware and Metal," said Mr. Scott, "is the backbone of our Association, and the applause which you have just given shows that it is a welcome visitor in your stores as it is in mine."

Following the president's address, the report of the executive committee was read, and on motion, received and referred to the resolutions committee. The same action was taken with the reports of the secretary and treasurer, as reproduced below.

FLASHLIGHT TAKEN JUST BEFORE THE GUESTS AT THE DINNER DISPERSED.

The Photographer Has Failed to Catch the Faces of All Present, but the Picture Shows the Large Number who Enjoyed the Hospitality of the Howland Firm.

EXECUTIVE COMMITTEE'S REPORT

The Executive Committee of the Ontario Retail Hardware Association begs leave to report as follows regarding the various matters receiving their attention during the past year.

1. Trade Grievances—Less than a dozen complaints of unfair selling have been received against manufacturers and jobbers during the year and only one or two of these have been important. Some of the complaints have been very indefinite and we would urge great care in having the facts correct before sending complaints for action.

2. Collection Department—This branch of the association work has been very successful and about seventy members are now using the service to good advantage judging from the testimonials received.

3. Mutual Fire Insurance—Some progress can be reported in this work. Negotiations are on with a firm of insurance brokers and a definite plan will likely be worked out shortly, the results of which will mean large savings to members on their fire insurance premiums.

4. Legislation—The executive has been on its guard against unfavorable legislation in both Dominion and Provincial Houses and has given consideration to several laws. This convention should again place itself on record against the enactment of a parcels post c.o.d. law; against the unfair features of the proposed "Co-operative Act"; and once more urge the amendment of the Division Court Act in respect to the collection of accounts by garnishment.

5. White Lead Marking—Much correspondence has been carried on between our association and the various manufacturers of white lead with the aim in view of discontinuing the marking of a second grade lead as "No. 1." From the replies received we hope to receive

favorable consideration to our request.

6. Cartage Charges, Etc.—No progress can be reported in the matter of inducing jobbers to abolish cartage charges. Your executive has stood firm on this question but the jobbers have declined to change existing conditions. As some retailers have an arrangement with certain jobbers to deduct systematically from bers statements the amount of cartage paid during the month, your executive urges a general adoption of this plan by members. In the matter of stamping the weight on parcels of freight the Wholesale Hardware Association has also declined to act favorably on our suggestion, claiming that this is unnecessary. Another suggestion sent the Wire Nail Association suggesting a revision of the wire nail list has also been considered unfavorably by that association.

7. Enamelware Seconds—Correspondence with the Department of Trade and Commerce, Ottawa, has shown that no

W. G. SCOTT, MT. FOREST.

Retiring President, Elected on Executive Committee.

assistance can be expected from the Dominion Government in the prevention of the marketing of inferior goods without distinguishing marks until an act of Parliament is passed. Your executive has requested R. Blain, M.P., for Peel, to assist us in securing such legislation but without success.

8. Amendments to Constitution—Notice has been given of two amendments—one relating to the date of holding conventions and the other to the method of making amendments. Your executive recommends favorable action on these and the appointment of a special committee to make the necessary changes and report regarding other changes considered advisable.

9. Place of Next Convention—An invitation has been received from Hamilton to hold the next convention in that city. The executive recommended the aceptance of the invitation.

10. Organization—During the year a start has been made towards district organization. This plan of getting the hardwaremen in the various districts together should be pushed during the coming year and district conventions called during the summer or fall in several of the most central points in Eastern, Northern and Western Ontario.

In conclusion we would recommend the election of two committees by the convention, one on resolutions, to consider the recommendations made in this and other reports, and another on nominations to report on a set of officers for the coming year with instructions to select an executive representative of the larger firms in the cities as well as the trade in the smaller towns.

W. G. Scott, President.
Weston Wrigley, Secretary.

Toronto, Feb. 12, 1908.

SECRETARY'S REPORT.

Gentlemen,—As the report of the executive committee contains an outline of the work done during the year only, a brief reference will be made to the work of the secretary's office.

The collection department has entailed a lot of work, but its success has warranted the effort. Practical evidence of the effectiveness of the letters has been evident by the receipt of many letters by the secretary from delinquents, enclosing cheques in settlement of accounts or making promises to pay in a given time. Members who have used the service can speak to best advantage regarding the results received, both direct and through the secretary.

The total of $104.49 for job printing and $103.70, expenses of secretary's office, (chiefly postage) will give an idea of the volume of work done. Roughly speaking, about five thousand parcels, letters and post cards were mailed by the secretary during the year.

The association has gained in both influence and membership during the past year. Manufacturers, jobbers and travelers now recognize the association as past the experimental stage and a power for the good of the trade generally. Retailers also are showing by their applications for membership that they, too, in increasing numbers, are realizing their duty to the organization. A year ago our books showed 150 members enrolled. To-day after crossing off 14 names of firms gone out of business burned out, withdrawn, etc., we have nearly 220 members, and this number is almost certain to be increased by a couple of dozen during the convention. Of last year's 150, about 80 were secured by the personal solicitation of organizers. This year only 30 were secured in this way. Experience shows that members who join voluntarily by mail, are far more useful members than those who have to be "talked in" by an organizer.

The extensions of membership in the future should come largely as a result of the formation of district associations. The coming year should see more active work done in this direction than in the past and if possible the trade in the districts surrounding such centres as Hamilton, London, Guelph, Barrie, North Bay, Peterboro, Kingston and Ottawa should be called together, one or more of the executive officers being present at each meeting.

In connection with this work it might be pointed out that as a result of some quiet, but effective work done by the Retail Merchants Association and other organizations, an amendment to the Criminal Code is likely to be made at the present session of parliament, making it legal for merchants to arrange reasonable lists of prices for their self protection. A copy of the law as likely to be amended accompanies this report.

The secretary would suggest that in order to do more effective and systematic work that next year's executive divide itself into four standing committees as follows: Trade grievances (composed of the president and two executive members); legislation (1st vice-president and two of executive); railway rates, etc., (2nd vice-president and two of executive), and fire insurance, (treasurer and two auditors).

J. R. HAMBLY, BARRIE.

Elected President by Acclamation.

If these suggestions are favorably considered I would urge that the committee on legislation confer with the representatives of the Retail Merchants Association regarding the general legislation that body is striving for as unless the two associations work together in this matter one is likely to nullify the effects of the other. It would certainly create an unfavorable impression upon any government to have two different deputations appear before them if there were not a thorough agreement between the two retail associations.

A year ago it was hoped that a Dominion Retail Hardware Association could be formed, but circumstances during the past year have not been favorable to pushing this work. Our sister association in Western Canada has become disorganized and no convention is likely to be held in Winnipeg this winter. British Columbia has an association that covers the four large Pacific coast cities, while Nova Scotia has not been able to complete an organization yet. The trouble in Western Canada has

been due to two causes, it is understood. In the first place, three large provinces have been too large to include in one organization. Some good district associations are in existence and Manitoba, Saskatchewan and Alberta will probably reorganize provincially shortly. Secondly, an attempt was made to arrange prices from the central headquarters. Experience has shown that our provincial association is acting wisely in leaving prices entirely alone. By developing good feeling amongst the trade, by giving results sufficient to make it worth while for hardwaremen to belong to the association and by encouraging the organization of district bodies (where prices can be dealt with if the Criminal Code is amended), the Ontario Association seems to be on safe ground.

The secretary had the pleasure of attending the Detroit convention of the

WESTON WRIGLEY, TORONTO.
Re-elected Secretary.

Michigan Retail Hardware Association last August and learned many things while there. We are fortunate in having with us at this convention a return visitor in the person of the vice-president of that association. We should benefit by his presence and his organization's longer experience. Members who can spare the time would also benefit by attending the sixth annual convention of the New York Retail Hardware Association in Buffalo next week, Feb. 18 to 22.

In conclusion, your secretary would urge every member to make more use of the organization. If there are problems or difficulties, do not conceal them, but write in to headquarters. If there are complaints that the association is not accomplishing much, the fault rests very largely with the people who make the complaints. To make the association of use, each one should do his share. The secretary is devoting every effort to make the organization show results to the members and is ready to step aside if anyone who can give more time or do the work better is available at any time.

Respectfully submitted,
Weston Wrigley,
Secretary.

THE CRIMINAL CODE.

2. Nothing in this Section shall be construed to apply to combinations of workmen or employes for their own reasonable protection as such workmen or employes.

The amendment it is desired to add after the word "employes" reads: "Or to wholesale or retail merchants or employes for their own reasonable protection as such wholesale and retail merchants or employes."

(a) No prosecution shall be commenced under the above section 498, without the fiat of the attorney-general for the province in which the charge is laid.

FINANCIAL REPORTS.

The reports of the secretary and treasurer as audited for 1907, were read and referred to the resolutions committee. These reports were printed in Hardware and Metal last week.

The Roll Call.

The roll call of the membership was asked for, and the names of all members read out, between 70 and 80 of the members responding to their names.

On motion, the reading of the minutes of the last convention and of the executive meetings was dispensed with, these minutes having been published for the benefit of the members on the association page of Hardware and Metal.

Amendments to Constitution.

Amendments to the constitution regarding the date of holding conventions and the method of making amendments to the constitution were read, and referred to the committee of constitutions. The committee was also asked to report on the question of accepting travelers as members, and the action of the executive in selecting May 1 as the beginning of the association year, was also referred to the committee, with instructions to bring in a report.

Election of Committees.

For the committee of constitutions, Messrs. Moorehouse, Toronto; Humphries, Parkhill, and Taylor, of Carleton Place, were elected. The resolutions committee was selected with Messrs. Jeffery, Midland; Brocklebank, Jr., of Arthur, and Binns, of Newmarket, as members. The nominating committee elections resulted in the choice of Messrs. Caslor, Toronto; McNab, Orillia, and McClung, Trenton. The committees were instructed to meet at the close of the convention session, and bring in a report Thursday morning.

MUTUAL INSURANCE COMMITTEE.

The committee on mutual insurance beg to present their report of investigation into the matter of insurance.

When your committee was appointed they were instructed to investigate this matter on two lines. First, as to the desirability and possibility of organizing a company of our own for the carrying of our insurance on a mutual basis. Second, to ascertain if an arrangement could be made with an existing line company on a preferential basis. As to the desirability of carrying our own insurance there seems to be only one opinion, namely, that it would be greatly to our advantage to do so.

1. Hardware stocks generally are good risks, providing special care is taken in the storage and handling of oils.

2. Each risk is isolated. Some states (and it is only from their organizations that we can get practical information, there being no such companies in Canada) limit the amount of insurance in one block to $4,000, while others refuse two risks together, accepting the first application.

3. A certain amount of insurance must be carried in stock companies, thus guaranteeing the desirability of the risk.

J. WALTON PEART, ST. MARY'S.
Who the Delegates Wouldn't Let Retire From Office.

4. The insured are practically all known to the management.

5. The rebates run from 25 to 75 per cent. of dividends.

6. There are no agents and no commissions to pay.

The following figures will illustrate the advantages of the mutual organization over the stock company.

For ten years ending January 1, 1906, the stock companies of the United States received premiums amounting to one billion dollars. Their losses amounted to eighteen millions of dollars, or 2 per cent. more than this amount. The premium received by hardware mutual associations during the same period was $318,000, with losses and expenses amounting to $136,000, 57 per cent. less than premiums, or as compared with the stock companies, a difference of 5 per cent. in favor of the mutual organizations.

The losses in stock companies was $6 on every $100 of insurance, while in the mutual companies the total fire losses was $78,000 on a total insurance of $7,000,000, or $1.10 per $100.

The expenses for same period in stock companies were $4 on every $100 of insurance, while in the mutual companies they were only 77c, an exceedingly heavy expense in the first instance, and an extraordinary economical management in the second. The average expense of Canada stock companies for some years has been about 33 per cent. of premiums, while the experience of United States mutual organizations is that a very efficient management may be obtained on an expense of 18 per cent., which, in the case of the Wisconsin association, was in 1905 reduced to 15.77 per cent. Thus we see that while on the one hand the stock companies must depend solely upon their functions as bankers to show any profit on their business, (the fire loss and expenses exceeding the total premiums by 2 per cent.), the mutual organizations are able to refund to their members rebates ranging from 25 to 75 per cent. of premiums. Rhode Island mutual companies, in fact, have refunded in one year as much as 82 per cent. of premiums on state business, and 75

TREASURER JOHN CASLOR.
Who "Interviewed" so Many Delegates During the Convention.

per cent. on business done outside the state.

Something might be said as to the methods of existing mutual companies of paying premiums and of making refunds.

Lumbermen Make Savings.

The Western Canada Lumbermen's Association requires insurers to make a deposit (as a guarantee of good faith) amounting to one premium at stock companies' rates, they then pay into the hands of the treasurer an amount equivalent to 4 per cent. of this premium per month, or 48 per cent. per year, which amount they have found sufficient to meet losses and expenses. Another method is to pay full stock rates and refund balance on hand at end of every year's business.

Still another method and one that appeals to us as the most businesslike arrangement is to pay dividends as in the last case, but to limit the refunds to 40 per cent. of premiums any balance on hand being placed to a reserve fund to provide against extraordinary losses.

With a view to ascertaining the opinions of the individual members of the association on this subject, a circular was issued, to which we received replies from thirty-three members, who signified their willingness, providing a mutual company could be formed, to insure to the limit of $3,000, to which amount we deemed it advisable to limit each policy. From thirty-three members this meant about $100,000, and premiums of $1,800, at the average rate of 1.80 per cent. We think we are safe in saying that we could begin a mutual organization with 100 members, and one quarter of a million dollars' insurance, and that the likelihood would be a membership of double that amount with half a million of insurance, giving a premium of about $9,000, and with any less than this amount we do not think the formation of a company upon these lines would be advisable.

Unfortunately, under the existing laws of this province, we are unable to organize a mutual insurance company of our own, there being two particular features of the law which bar us from this privilege. First, before a mutual insurance company can be incorporated under the Ontario Insurance Act, it must be shown to the satisfaction of the Attorney-General that there exists in the locality no adequate provision for the insurance on the mutual plan of property against fire. Second, a purely mutual fire insurance company cannot undertake mercantile or manufacturing risks, and, of course, "mercantile" risks could include retail hardware and stove dealers' supplies.

The other plan suggested was to get into communication with established stock companies with a view to having our business handled through our secretary on a preferential basis, in consideration of our placing with them a sufficient amount of business to warrant such preference. Our members were very careful in expressing themselves on the desirability of such an arrangement, but with the stipulation that the company must be one of whose standing there could be no question, we are warranted in stating that should such an arrangement be possible we could offer insurance of at least six hundred thousand dollars, or an average of $6,000 from 100 members, and more likely double that amount from double that number of members. The companies approached, however, could not be induced to consider such an arrangement, the consensus of their opinion being expressed in the following reply received from one of the foremost of these companies operating in Canada :

> "We should be pleased to enter into an arrangement such as you indicate were it not that we feel that if we did so our local agents all over the country would feel that they had a just cause of grievance against the company and for this reason I regret very much that we cannot entertain your proposition."

It is true that in one case we had a proposition from a mutual company to handle all our business through our secretary and rebate us 20 per cent. of the amount of premium paid, but as this is the amount which is at present paid all mutual concerns by mutual insurers we did not deem the proposal of sufficient importance to give serious consideration.

Within the past few days we have had submitted to us a proposal which we have not been able to give the consideration necessary to the making of a proper report to the convention. All we are prepared to state at the present moment is that the proposal comes to us from a firm of insurance brokers in the city of Toronto, who claim to have behind them assets to the value of $700,000, and who are endeavoring to arrange with the Canadian Manufacturers' Association and one or two other associations to handle their insurance on the profit-sharing plan. They guarantee not only to limit their expenses to 20 per cent. of premiums (which 20 per cent. we think is quite sufficient), but to set aside 40 per cent. of the underwriting profit each year to be divided among policy-holders of two years' duration who have not made any claims in excess of the amount of their premiums.

To sum up the result of our investiga-

D. CINNAMON, LINDSAY.
The 12-Hour-Old Member Who Was Brimful of Enthusiasm.

tion we have to present for your consideration the following :

First : An arrangement with a stock company doing a business through local agents seems impossible.

Second : A mutual insurance organization is not possible under existing laws and it is for you to determine whether you deem it of sufficient importance and of sufficient advantage to warrant our applying for an amendment to the present statutes.

Third : Shall your committee continue negotiations with the firm of brokers referred to and providing we are assured of their financial responsibility, would the members agree to place their insurance on the basis mentioned.?

This is our report.

J. WALTON PEART,
Chairman.

St. Mary's, Feb. 12, 1908.

The report was received with applause, and it was decided that the committee be given power to continue their investigation, and report later.

At 3.30, President Scott introduced Porter A. Wright, of Holly, Mich., who opened the question box, and conducted a discussion on about a dozen or more questions, a report of which will be given in the next issue of Hardware and Metal. The convention adjourned at 5 o'clock.

THURSDAY MORNING.

The convention was called to order at 10 a.m., the first business being the consideration of the Constitution Committee's report, the committee having made a thorough revision of the constitution and by-laws bringing them up to date. The Constitution as revised will be published in Hardware and Metal next week.

The chief discussions raised by the report were those relating to the date of the membership year and the suggestion that travelers be admitted to membership in the Association. After a lengthy discussion it was decided that in future there should be no departure from the annual membership fee of $3, the membership year to begin on March 1, and end February 28.

A motion was made that travelers be accepted as associate members, at an annual fee of $1, one open meeting being arranged at each convention at which travelers could be present. Mr. Wright, of Holly, Mich., was asked to speak regarding the experience of the Michigan Association in this matter, and he stated that his organization considered the travelers the best friends the Association could have. "They bring in more members than any one else," said Mr. Wright. "They boost every convention, and encourage members to attend. It is said that the travelers are hired by the jobbers. That is true, but how long would a traveler hold his job if he couldn't hold the retailers' friendship. We admit travelers to certain general meetings, and get them to read papers and take part in the discussions. You will make no mistake in deciding to admit the salesmen."

The subject was discussed by several speakers, some contending that it would be unfair to ask the travelers to pay fees to the Association, while others contended that the travelers should not be put in the dual position of attending the retail convention, while representing jobbers or manufacturers. The sentiment seemed to be very evenly divided, and a motion finally prevailed to leave the matter on the table for another year.

After deciding to have the minutes of the convention published in Hardware and Metal, the report of the Constitutional Committee was adopted as amended. The Resolutions Committee reported that they had considered the recommendation contained in the Secretary's and Executive Committee's report, as well as the financial statements, and concurred in the various recommendations made, their report was received and adopted.

On motion, it was decided that the invitation to hold the next annual convention at Hamilton, be accepted, the motion being enthusiastically adopted.

At 11.45 the convention took up the question box discussion, adjournment being made for lunch at 12.20.

Afternoon Session.

The convention re-assembled at 2 p.m., correspondence being read on several matters by the Secretary, some complaints received were passed on to the Grievance Committee for the coming year.

The Secretary reported that word had been received from Ottawa that the Dominion Government were not likely to go ahead with the proposed Co-operative Act, owing to the general opposition against the unfair features contained in the proposed legislation. It was also announced that the present is an opportune time for pressure to be brought upon members of the Ontario Legislature, in favor of having the Division Court Act amended, to allow the garnishment of accounts of smaller sums than $25.

The Statutes are being revised and action must be taken at once or the law will stand unchanged for several years.

Election of Officers.

The report of the Nominating Committee was read, and additional nominations called for. The committee reported in favor of the election of J. R. Hambly, of Barrie, to the presidency, and he was unanimously chosen. For first vice-president, J. Walton Peart, St. Mary's, last year's second vice, was nominated, but he declined to accept election. C. F. R. Taylor, Carleton Place, and D. Brocklebank, Arthur, were also nominated, but Mr. Taylor withdrew, leaving Mr. Brocklebank elected by acclamation. For second vice-president, A. Ballantyne, of Brantford, was chosen; F. W. Jeffrey, of Midalnd, declined nomination. G. A. Binns, Newmarket, was also put in nomination, although he had been called home and had expressed a desire to see more representatives of the larger cities on the Executive Committee. On a ballot being taken, Mr. Ballantyne was elected.

Treasurer Caslor and Secretary Wrigley were re-elected to their respective offices by acclamation.

For the Executive Committee, 14 nominations were made, C. F. R. Taylor, Carleton Place, and H. Becker, New Hamburg, declining. J. Walton Peart, St. Mary's, also declined to stand, but on the urgent solicitation of the president and numerous other members, finally acceded to the general wish that he remain on the Executive Committee. The following names, therefore, went to a ballot, the first six securing the highest vote being declared elected: W. G. Scott, Mount Forest; J. Walton Peart, St. Mary's; D. Cinnamon, Lindsay; R. C. Chown, Belleville; W. H. Richardson, Essex; J. R. McMillan, Guelph; G. H. Clark, Niagara Falls; J. W. McDonald, North Bay; G. A. Binns, Newmarket; F. G. Bailes, Oshawa, and Wm. Lawrie, Forest.

C. F. Moorehouse and J. W. Peacock, Toronto, were re-elected auditors for the coming year.

General Business.

While the ballots for the Executive Committee elections were being counted, considerable business of a general nature was transacted. Suggestions for next year's convention were called for, and one delegate urged the advisability of having badges numbered consecutively to be worn by the delegates for purposes of identification. It was urged that the growing attendance of the convention made necessary the adoption of some system of getting the delegates better acquainted with each other. The opinion was also expressed that it would be wise to have the convention last longer than two days, extra time being allowed the delegates to transact business. One delegate urged that no wine be served at future dinners. Another one said he had weak eyes and objected to tobacco smoke, while a third said he thought fish ought to be stricken off the bill-of-fare as he sometimes swallowed the bones. Still another delegate said salads were objectionable to him as they did not agree with his digestive organs. The president promised to take all of these suggestions into his serious consideration.

Col. J. B. MacLean was called on by the president to speak briefly, and entertained the delegates with a short address on "Salesmanship," congratulating the convention upon the practical nature of the discussions participated in and upon the high degree of intelligent salesmanship and business knowledge manifested in the question box discussion which he had listened to.

A. W. Humphries, of Parkhill, moved that Hardware and Metal be asked to publish in full, the address delivered by Col. MacLean at the banquet on Wednesday night. He said that he had been greatly interested in the talk on the evolution of merchandising, and that he wanted to have the address in shape for reference in the future. D. Cinnamon, of Lindsay, seconded the motion, and spoke of the great value of Hardware and Metal to him in his business. He also commended highly The Busy Man's Magazine, and urged the members who are not now subscribers, to forward their names. "If any of you subscribe and are not satisfied at the end of the year, I will pay the price of your subscription," said Mr. Cinnamon. The resolution was adopted.

Resolutions.

The following resolutions were adopted by the convention:

That the Secretary be instructed to write H. S. Howland, Sons & Co., thanking them for the splendid entertainment provided at the dinner on Wednesday evening.

That this Association place on record our hearty appreciation of the services rendered the Association by Hardware and Metal, and that the Secretary be instructed to convey to Col. MacLean our sincere thanks for the privileges accord-

ed us in his journal and the many other kindnesses which he has shown us.

That the heartiest thanks of this convention be tendered Mr. Wright for his attendance at our meetings and for the able and helpful manner in which he has conducted our "Question Box." That Mr. Wright convey to the Michigan Retail Hardware Association the greetings of the Ontario R. H. and S. D. Association in convention assembled.

That the services of our Secretary have been invaluable to the Association. That while we realize that any sum we are in a position to pay him will be entirely inadequate to remunerate him for his services in our behalf, we would instruct the Executive Committee of 1908-9 to pay him an honorarium consistent with the condition of our funds, purely as a mark of our appreciation.

Whereas, the Retail Hardware and Stove Dealers' Association have decided that the affiliation of the travelers for the year 1908 was not advisable, and in view of the kindly feeling towards the travelers, that this meeting show their appreciation by setting a session apart at our next convention whereby they may have the privilege of attending our meeting.

Home Organization Urged.

At this point, President Scott handed over the president's chair to President-Elect Hambly, the delegates testifying to their satisfaction at Mr. Hambly's election, by the singing of "He's a Jolly Good Fellow." It was some minutes before Mr. Hambly could make himself heard, but when he did so, he made a splendid talk on the "Advantages of Home Organization." "Go home and make friends with your opposition," urged Mr. Hambly. "Tell your customers who are always saying they can beat your prices, that if they can do better they should buy at some other store. Local organization," he added, "gets the trade together, and stops the cutting of prices. Our Association will be just what the members made it," concluded Mr. Hambly.

Before adjourning, Porter A. Wright, of Holly, Mich., thanked the delegates for the many courtesies extended to him while in Toronto and congratulated the Ontario Association on the remarkable progress it had made since its organization less than two years ago. "Never yet," he said, "had he listened to so practical a question box discussion as had taken place at the Toronto convention. Mr. Wright invited as many members as possible to attend the 12th annual convention of the Michigan Retail Hardware Association in Detroit next August.

It was decided that the treasurer and secretary, and G. H. Clark, Niagara Falls, be given credentials as delegates to the New York State Retail Hardware Association at Buffalo, Feb. 18-22.

At 3.45 the business of the convention was concluded and the question box discussion was again taken up.

At 4.30 the convention finally adjourned with a general handshaking.

The Delegates Royally Entertained

Complimentary Dinner Tendered by H. S. Howland, Sons & Co., Thoroughly Enjoyed—About 100 Guests Present—No Expense Spared to Provide A Good Time.

One of the pleasantest features of the convention was the complimentary dinner tendered by H. S. Howland, Sons & Co., at McConkey's on Wednesday evening, when about one hundred members of the association and guests, full of good fellowship and jollity, enjoyed the hospitality of this old established firm, for a time got away from the serious business of the day, and later talked generally over the present position, difficulties, advantages and outlook of the hardware trade and of the association.

The guests were ushered into McConkey's palm room pretty promptly after 7.30, and amid pleasing decorations, with the music of an orchestra and general good cheer a dinner was served which was indeed a compliment to the association. The tables were arranged in the form of a long-legged U, with Mr. Peleg Howland, who presided as toastmaster, in the centre, and the speakers seated near him, several of whom are shown in characteristic attitudes in the scene presented herewith.

A Jolly Group of Guests.

The fact that the members of the association had gotten pretty well acquainted on Wednesday was very evident for the dinner was much less stiff than such functions usually are. Good fellowship and friendly feeling toward other members of the trade were everywhere evident, and indeed this idea was the keynote of the evening's proceedings.

Peleg Howland began the programme by gracefully proposing a toast to the King, which was, of course, heartily received, and, rather curiously, though happily, as it turned out, called on Porter A. Wright, representative of the hardware association of Michigan, to reply. Mr. Wright was given a most hearty reception and cheers were also given for President Roosevelt.

Greetings From Michigan.

Mr. Wright, who has a jolly manner and a big voice, which he uses to good advantage, after appropriate reference to the toast, struck the popular note of the evening by speaking of President Roosevelt's well known encouragement of large families and likened the body gathered before him to a large family of brothers with a similarity of aims and objects and with the same battles to fight. Mr. Wright expressed himself as delighted with the evidence of this good fellowship and prophesied that if this and the other methods already in operation were continued, the Ontario association would shortly rival in numbers and influence the body to which he belonged. Continuing, he gave a brief history of the development of the Michigan association.

"If the hardwaremen of Ontario would attend these conventions," said Mr. Wright, "they would not only have a better time than they are having at home, but they would also become better, nobler men." Mr. Wright closed by pleading for a more cordial relation between hardwaremen, particularly those in the same town, and advised the members to hold strongly to profitable prices on all their goods. He also invited the association members to the Michigan association's convention in Detroit on the 2nd and 3rd of August.

Wholesalers' Goodwill.

Peleg Howland, in extending a formal welcome to the members, spoke of the pleasure it gave him to have them as guests. Referring to the association, he expressed himself as a strong believer in co-operation, and believed that the organization would continue to prosper if the lines it is moving on at present were continued. He hoped that this might be so.

Continuing, Mr. Howland referred to the excellent organization of the state and national hardware associations across the border, and hoped that development might be along similar lines in Canada. These organizations, he said, must be of immense benefit to the individual members.

Referring to business methods, Mr. Howland urged the introduction of strictly cash business, close adherence to contracts, the importance of knowing the exact cost of doing business, the advantages of regular stocktaking, and the maintenance of a fair price.

In proposing the toast to the Hardware Association, Mr. Howland coupled with it the names of W. G. Scott, president of Mount Forest, Weston Wrigley, secretary, D. Cinnamon, Lindsay and F. W. Jeffrey, Midland.

The Hardware Association.

Mr. Scott took up the idea of the association's resemblance to a large family as suggested by Mr. Wright. "I suppose," he said, "if we receive this idea, the members may all be spoken of as my children. I hope they will be as good boys under the direction of the new president, as they have been under mine." In speaking of the compliment tendered by the wholesale hardware house to the association, Mr. Scott took this as an evidence of appreciation of the organization by the wholesale houses generally.

Mr. Scott went on to give a brief review of the growth and development of the organization. "Two years ago," he said, twenty members met in convention in Toronto. The membership a year later numbered 150. This year, we have about eighty present and about two hundred and fifty members. The association has made wonderful strides and has done good work.

Tribute to Hardware and Metal.

In closing, the president referred appreciatively to the guardianship of Col. J. B. MacLean, of the MacLean Publishing Company, in the organization of the association and paid a tribute to Hardware and Metal as its valued organ. The services of the secretary, Weston Wrigley, were also referred to with warm appreciation.

Mr. Wrigley was greeted with an ovation when he rose. His services as

secretary and the enthusiastic work he has done in promoting the organization is evidently highly appreciated.

"This is a rather unusual and very pleasing reception," he said. "It seems to be the general lot of secretaries to receive a shower of brick bats rather than of bouquets, such as has just been kindly given." Continuing, he said Mr. Howland had referred to him as father and Mr. Scott as a species of nurse, to the association family. As one of the youngest of the members, he rather wondered how he could reconcile the anomaly. Mr. Wrigley evinced a strong belief in organization, not only among retailers, but also among jobbers and manufacturers, indeed, in every line. Speaking of the progress of the association, he expressed his satisfaction with its present position—"it seems to have 'lit' safely," he said, following the point of a story. He believed the body would maintain its good position and would have further progress, and promised to give his best efforts to this end. "The present function," he said, "is an evidence of the good faith of the jobbers toward the association. It seems like the lion and the lamb lying down together, according to the old story." A significant fact in connection with the progress of the association was that, whereas in the first year about half the members were brought in by personal solicitation, this year, by far the larger number of the new members had come in without pressure and these latter were among the most enthusiastic members.

Some Grievances.

F. W. Jeffrey, after a few words emphasizing the importance of the members getting better acquainted with their opposition merchants and of bringing these men into the association, spoke of several grievances under which the trade was at present suffering. One question was that of the extra cost of packing cases. He suggested that the jobbers should make no extra charge for cases, but should put the cost of this on the face of their invoices. He advocated also the putting of freight charges on a similar basis. A second difficulty was met in the building trade when outside contractors who were doing local work, were able to buy their hardware supplies from other sources at rates which the local dealer could not afford to quote. He thought the matter might be remedied and spoke of the factor the association ought to be in taking up those matters.

What a New Member Thinks.

A bran' new member, only twelve hours old, as he said, D. Cinnamon, of Lindsay, told in a jolly way how glad he was to be present and how much the association had already done for him. "It has taken away the idea I had," he said. "that my opposition are cranks," He had spent eighteen years in the hardware business but had gotten acquainted with but a few of the trade. His position is now very different. Mr. Cinnamon showed a touch of the blarney stone by declaring, and he seemed to be sincere, that the members of the trade present were as "good a looking bunch" as any other he had seen. He told how favorably he had been impressed with the business methods evidenced at the convention and prophesied that the association would come to be weightily represented in the Canadian legislature. He believed the hardware trade would grow with Canada's great progress.

The Wholesale Association.

In replying to the toast to "The Wholesale Hardware Association," Thomas Dexter, of H. S. Howland, Sons & Co., president of the Canadian Wholesale Hardware Association, said: "It affords me very much pleasure to say to you again this year that the Canadian Wholesale Hardware Association wish you every success in your good work. You cannot over estimate the benefits of an organization, such as you have, to each of your members. It helps you in many ways, both directly and indirectly.

"In our association one thing that we agreed upon was the shortening of credits. This certainly has been a benefit to the manufacturers, wholesale and retail merchants and consumers alike. Years ago there was not the keen competition of to-day, profits were very much larger, although the volume of business was not nearly so great, and credit was given for a long time; but this is all changed as you very well know, and we are compelled now to sell on very close margins, and as near as possible to a cash basis. The retail merchants as far as they can, should sell for cash. If you base your selling prices on giving credit," Mr. Dexter continued, "your competitors who sell for cash only will scoop your trade, because consumers to-day are looking for close prices and have the cash in nine cases out of every ten. I, therefore, think the present terms, although

THE TOASTMASTER AND SOME OF THE SPEAKERS.

Lt.-Col. MacLean, Thos. Dexter, W. G . Scott, Mr. Peleg Howland, G. A. Binns, James Hardy.

in a great measure forced upon us, are more satisfactory than they were years ago, and before our associations were in existence.

"In our wholesale association we endeavor to work in harmony with the manufacturers. They should make fair profits and at the same time give us reasonable protection when they think it necessary to sell to our customers. We feel that when we can arrange with a maker of any staple line the prices at which we shall sell, he establishes confidence with the wholesalers and the retailers and all retail merchants have an even chance for the consumers' trade. We have never found manufacturers willing to arrange prices which would give you or give us undue margins. On the other hand, I am free to admit that the profits in the retail, as well as in the wholesale hardware business in this country are not what they ought to be, and one of the main objects of your association, as well as ours, should be to find ways and means to make the profits satisfactory. Members of your association should not hesitate to confer with one another so as to establish prices which will allow you a proper return on capital invested and your time and labor in keeping your business in good running order.

C. F. MOOREHOUSE, TORONTO.

The Association Auditor, Who Will See That Things Are Done "According to Hoyle."

"During the last three or four months trade has not been as good as most of us wished and prices have declined on some staple lines. Fortunately the declines have taken place at the time of the year when stocks are at the lowest point. We hope now that the spring trade is near, to see better conditions. It is easy to make money in a rising market and large sales. Last year started with a rush and advancing prices, and you all made money. This year starts in fairly well and we hope will steadily continue to improve so that at the end you will all be able to say, 1908 turned out better than we expected, and better than last year."

James Hardy, secretary of the Wholesale Hardware Association, followed Mr. Dexter. He urged the Retail Association to bring out a scheme to find out the exact cost of doing business, and referred to the American Association as an instance of where this was being done. Mr. Hardy advocated the establishment of a fair and profitable price on all lines of goods carried, and said that each hardwareman should make a strong effort to get acquainted with his business neighbors. "This," he said, "is the surest and speediest way to settle your difficulties." Continuing, Mr. Hardy said that the Wholesale Association was willing to do all in its power for the retail body and reminded the members that the jobbers were tied up by agreements with the manufacturers, and the manufacturers by agreements among themselves. The way to look at troublesome questions was in the light of "what is best for the hardware trade as a whole."

Concluding, Mr. Hardy sounded an optimistic note as to the trade outlook, prophesying good business for all branches of the trade a little later in the year.

After a spirited song by Mr. Wookey, one of Howland's travelers, a toast which was received with a great deal of enthusiasm, was drunk to the organ of the association, Hardware and Metal, with this Mr. Howland coupled the names of Lieut.-Col. J. B. MacLean and H. T. Hunter.

Hardware and Metal Toasted.

Col. MacLean was given a very enthusiastic reception accompanied by a couple of impromptu appreciative songs.

On rising he said that all were to be congratulated on this gathereing. It is a development of the times—this coming together of the two great classes of merchants. The hardware trade as a whole, manufacturers and merchants, is really one great co-operative society or company in which all are working partners, but each zealous for the success of his own department.

"The chairman has asked me to respond for Hardware and Metal," he said,—an honor which I appreciate, and to address the trade in general, a feature of the gathering for which he owes you an apology."

Continuing, Col. MacLean said: "We are living in a new era. The last two decades have shown the greatest progress in retailing in the history of the world. Less than twenty years ago, the average hardwareman was merely a machine which worked its hands and feet energetically waiting on buyers, but seldom used its head. Customers were people who visited a store to buy necessities only. The machine gave these and nothing more. But there was a lot of dormant intelligence in these machines, which needed only a little inspiration and encouragement. Here and there a man, with so much pent up nervous energy that he could not contain himself, tried to sell something not asked for, to a customer who had come in unsolicited to buy some pressing necessity. This was the beginning of salesmanship—the greatest force in modern business.

That we did not earlier develop salesmanship, is perhaps due to a false pride. As a nation, we British, generations ago, became the most successful traders the world ever knew. But all success begets jealousy, and for the last two or three hundred years our shopkeeping propensities have been subject to the jokes and sneers of our less successful rival nationalities. These attacks told, and it was considered undignified to keep a shop, much less try to sell anything not asked for. Dealers put the business, but not their name, over their shop. It was bad form to show a customer anything he did not ask for and still more to invite buyers by a display of goods in the window, or by the distribution of a simple business card, Our American cousins, people of the same blood, untramelled by these influences and traditions first showed us the way to successful shopkeeping and business methods.

As I said, real salesmanship began when a merchant tried to sell a customer in his shop something which he had not asked for.

Then came modern salesmanship, which goes further, and aims to bring in the buyer—often for something he really does not want, but thinks he does—and when he is in the store to show him and try to sell him still more articles. Salesmanship has now developed into well defined departments, with experts in each, ranging from attractive buildings, show windows, interior displays, newspaper advertising, personal work of clerks, to the more spectacular and indirect Lipton method of international yacht racing. It must all rest on the good reputation for fair, honest and generous treatment of the customer, often at the expense of temporary loss. This is where we stand to-day.

F. TAYLOR, CARLETON PLACE.

Retiring After Two Good Years' Work on the Executive Committee.

Great as has been the progress of the last quarter of a century, I believe the next will show much more.

It is into the salesmanship end of the business I think the brains of the future will have to go. The financing, buying, collecting—while of the greatest importance, of vital importance—are matters of routine, in which no doubt, many improvements in efficiency through labor and time saving methods and systems will be introduced. Salesmanship, will in all probability be a profession. The young business man will go to college, graduate with a B.A. degree and spend two or three years in a technical training school, as do the lawyer, doctor, dentist or engineer of to-day. In these

class schools he will learn from the most experienced men all the principles of buying, attracting and handling customers. When he begins practical work, he will have to make a careful study of every article he handles, get the talking points from the manufacturer's salesman, and catalogues and literature. He will demand greater rewards and he will get them because he will make the business larger. He will have to take up lines that now seem to be outside the hardware trade. You who have now a small shop in the country will have premises larger than those of any city store to-day, not to mention the repair factory where all the motor, and farm and household machinery appliances of all kinds increasing largely in extent will be taken care of.

More than that you will begin to approach the point where the spending capacity of the people in your field will not keep up with the pace you want to drive your business. You will have to join hands with others in your town—bankers, manufacturers and mechanics, as well as merchants, to build up this spending capacity. You are, perhaps, in a farming community. You will have to work with the professors and experts in agriculture to make the people tributary to your store, increase the output from their lands, make six rows of grain grow on the stalk where only four now grow. Mr. C. C. James, Deputy Minister of Agriculture, recently showed that under the right kind of inspiration and education in Ontario in 10 years the farmers received $35,000,000 on three items—cattle, bacon and cheese.

"You are in a resort district you should help to organize the people to bring visitors and summer residents. I know of one Ontario town in which Americans are spending $200,000 a year on building summer homes alone. You should aid in establishing manufacturing industries in your town to get the trade of the working men.

This is the picture of what the modern merchant must be. It may seem a hard task, but the growth will be gradual, if rapid, and system will make it easy; the working pace furious, but competition less, and the rewards will be great. There will be more millionaire retailers and they will be the merchant princes of the future.

About 10 or 12 years ago Mr. Howland and a couple of Montreal dealers were discussing with me in that city the situation. He said he thought the jobber would become less and less a factor in the hardware life, that he would drift into manufacturing. The other jobbers agreed with him. I thought so myself—but business does not seem to be evolving that way. On the other hand, the jobber is looming up as a more important factor than ever. I think this is due to the smaller margin of profits, the increasing cost of maintaining a large and capable sales organization and the fact that the retail buyer, working at higher pressure during business hours, is not able to give attention to the salesman of manufacturers.

A few years ago the leading manufacturers began to send a few travelers direct to the retail trade. It worked very well and it paid well, but soon every manufacturer of importance had his travelers and those who first used salesmen felt the competition and put on more men. The country was overrun with them. The retailer was becoming a bigger and busier man and his time would not permit him to give a hearing to all who importuned him to listen to their story. This, coupled with the heavy cost such a force was entailing and the smaller percentage of profits under competition, caused manufacturers to carefully study the situation, with the result that to-day the tendency is to gradually reduce the number of traveling representatives, and instead of asking them to "sell," they use them to "talk" goods, leaving the selling and collecting to the jobbing houses—thus effecting a very great saving.

The most up-to-date manufacturers to-day regard the jobber and retailer as their sales force and are taking a deep personal interest in them. They are beginning to devote their energy to instructing that force in all the arguments that can be used to effect a sale,

and how to answer similar arguments advanced by competing manufacturers. They are taking steps to insure better profits to the merchant by economies in manufacturing costs, and a permanence of their business by maintaining the highest standard of excellence in quality and guaranteeing that quality under all circumstances.

This being the situation as I see it to-day, I think there should be a drawing still closer together of all interests, for the common good, but maintaining always of course our independent organizations.

As to "Hardware and Metal," I can say little, excepting that it is my intention to continue the policy of spending our profits on improvements. This has made it the great property that it is. When we make $1,000 we proceed to add features which will entail annual expenditures of perhaps twice that. For fifteen years the gross income has increased every year, without exception. Last year was the largest on record, yet the last three months there was a loss because we had added some new features and strengthened the staff by taking on another good man. This year we completed a corps of regular correspondents from every centre of the Dominion. Each week you in this province know the news of business men and conditions in British Columbia, as well as in Prince Edward Island. Our competitors say that this is not playing the game fair. I am not worrying about the present, I am building for the future. I am well satisfied with our progress, and if I am not getting cash dividends, I am getting what gives me far greater satisfaction—the satisfaction of being part of a newspaper that is respected, the pleasure that comes from the generous welcome that you have given me to-night, as the owner of that paper, the reception that I get from the trade all over Canada, and have been getting for years.

The paper is far from my ideal of a trade newspaper, but as our revenues increase, so will its usefulness to the trade. I have in mind the further improvement of our news service and the addition of several special writers in the not distant future. I cannot close without paying a tribute to my staff, who really deserve the compliments you have been paying me. In addition to the members of our staff here to-night, I would particularly refer to the men in Montreal, Winnipeg, and London, England.

Mr. Hunter brought out rather a novel idea in speaking of the grievances of the hardware trade, when he suggested that these matters should be considered a safeguard to business. "If the hardware business was easy," he said, "everyone would be rushing into it, and competition would be ruinous." He ranked the hardwaremen among the highest in the business world, because his business was clean and inviting, permitting the comforts of life, because its requirements of intelligence and education were large and because severe apprenticeship was necessary to assure success.

Mentioning the excellent financial position in which the hardware trade as a whole stood, Mr. Hunter quoted as an instance the few failures which had occurred during the last few months. "The hardware business has brains and capital in it," he said. "That's the secret of this satisfactory condition of affairs."

VOTE OF THANKS.

The "grandfather" of the association, Past President Humphries, said the late hour would prevent any of the guests from expressing their appreciation of the entertainment provided other than in the most simple manner. He would move a vote of thanks and if the motion was seconded put it to the meeting with all talk cut out. J. W. McDonald, of McDonald & Hay, North Bay, seconded the motion and it was adopted amidst enthusiastic handclapping. Mr. Howland briefly acknowledged the vote, expressing his hope that all had enjoyed themselves and that relations of jobbers and retailers would always continue harmonious.

A flashlight photo was then taken and the event brought to a close about 11:50 by the sining of the National Anthem.

PUBLISHED EVERY SATURDAY.

A SUCCESSFUL CONVENTION.

The gathering together in Toronto this week of nearly a hundred retail hardwaremen from various sections of Ontario was, when weather conditions are considered, a remarkable tribute to the growing strength of the Ontario Retail Hardware Association. Last week's heavy snowfall blocked every line of railway in Ontario for periods varying from a couple of days to over a week, some of the branch lines being still closed to traffic when the convention days arrived. The attendance of a larger number of delegates than ever before is, therefore, somewhat remarkable. The association officers can accept the large attendance as an endorsation of their activities while non-members can take it as the placing of the seal of approval upon an organization that has "made good."

It is difficult to exaggerate the importance of these annual gatherings to the success and usefulness of the association movement, one great benefit of which is the bringing of the merchants together and promoting acquaintance and friendship. and one of the charms of every convention is the fact that it contributes to this most important end. The education of the trade by discussions upon practical questions under able leadership; the consideration of grievances and difficulties which vary greatly in the different sections of the province; the formal expression of the judgment of merchants on subjects on which it is desirable that their interests be authoritatively voiced, as for example, the parcels post question, the methods of catalogue houses, or the sale of goods by jobbers or manufacturers to consumers; the awakening of enthusiasm as well as intelligence in the carrying on of business; increasing the helpfulness of the association to the trade at large—all these can most efficiently be accomplished in the gatherings of merchants from various parts of the province.

Not only in point of numbers was the convention a success—the business sessions, the question box discussion, the dinner tendered the delegates by the jobbing houses—everything in fact went off with a vim, and it is safe to say that no delegate who attended the convention this year will miss another gathering, unless there's something of tremendous importance to prevent his being present.

ONTARIO'S HARDWARE CENTRE.

Commenting on the editorial in last week's Hardware and Metal, Arthur F. Hatch, manager of the Canadian Steel Goods Co., Hamilton, drew attention to one of the factors helping to build up that city as a centre of hardware manufacturing in Canada. It is almost a daily occurrence, he says, for orders to be received from Western Canada points giving instructions to include their shipment in a car of goods being sent west by one of the other large hardware manufacturers located in the ambitious city, or to receive a message from one of the latter that they have some goods going to a certain point and will be glad to co-operate in the shipment. In less than car lots a fourth class rate is charged, but in cars the rate is fifth class, so a material saving is made by manufacturers in such a favorable location.

Hamilton, with its large steel and iron industries, Westinghouse electric and Deering implement works, its big wire works, shovel plant, screw and nail industry, lantern and tinware factories, roofing, woodenware and other hardware industries, is making a big name for itself, not only in Canada, but across the border. In fact, it is said that in Pittsburg, where the Hamilton metal industries are large buyers, Hamilton is considered the largest industrial centre in Canada.

These facts should be considered by the municipal officials in Toronto in dealing with prospective industries in the future. Had the Hamilton Steel & Iron Company located in Toronto as originally proposed ten years ago, the industrial history of Hamilton would have to be written in a different manner.

The lesson is not only for Toronto, but for those in positions of influence in every city and town in Canada. When opportunity knocks, open the door and, without handing over the keys of the safe, extend a hearty and generous welcome to the promoters of legitimate industries.

A GROWING METAL DEMAND.

In considering the general conditions of the metal markets at the present moment there is one promising feature which should not be overlooked —the improvement in the demand compared with a few weeks back. Taking each metal there are distinct signs of a growing consumptive call, not in the same proportion of strength by any means, but still insistent enough to warrant a certain amount of confidence in the ultimate recovery of the markets. In tin, for instance, the demand is especially good, not only in Europe, but in the States. Stocks in the latter country were drawn upon to a considerable extent during January, and the imports latterly have not been sufficient to satisfy requirements. Even in the primary market there does not seem to be an overwhelming abundance of the metal, and with the consumptive call increasing on both sides of the Atlantic, tin is now soaring ahead in price. Of course the present figure is a speculative one, and may at any moment be broken by an unloading movement, but still there is incontrovertible evidence that the demand in tin is at present strengthening, and that a good trade is being done.

Copper in reverse to tin, is being hammered a little, and the price ruling in New York for some time has weakened owing to a great decrease in exports. But even here the domestic demand is not stagnant. Steady and increasing business is being done, but naturally it is not of such a volume—nor could one expect it to be—to balance a heavy falling off in exportation. The European demand has taken over 1,000 tons a day for four months, and it would have to be a very healthy demand to maintain prices in the face of such a side blow. That the metal has kept its strength so well is evidence of a stronger domestic demand than is generally credited. The continued fall of prices in the English market looks as if copper was over-abundant there, but the industrial activity should not take long to clear the situation, especially as stocks in the Old Country and in Europe were apparently not heavy previous to the recent exporting.

While it cannot be said that the markets just at present, with tin going up rapidly and copper going down, show any great sign of stability, but underlying all these fluctuations there is the evidence of a growing demand, and in this fact rests the best hopes of a firm tone being restored to the markets generally.

Markets and Correspondence

(For detailed prices see Current Market Quotations, page 66.)

MARKETS IN BRIEF.

Montreal.

Pig Iron—Dull and uncertain.
Copper—Cut of ¼c.
Tin—Advance of ½c.
Spelter—Higher prices anticipated.
Horse Nails and Shoes—New list issued.

MONTREAL HARDWARE MARKETS.

Montreal, Feb. 14.—Owing to the snow storms, trade has been very quiet. Travelers have been held up, and customers made to suffer an annoying delay through not receiving goods shipped, especially as many of the latter were rush orders. This is another instance of the necessity of dealers keeping track of their stock, and not letting it get down to such a low state that delay in consignment means financial loss. Railroads are now beginning to move freight more freely, but not to any degree of satisfaction. It is unfortunate that the deadlock should have occurred when trade was commencing to move more strongly, but it is expected that the set-back will be picked up within the week.

Reports from the west, although not so favorable as they might be as regards immediate trade, speak hopefully of the prospects when seeding commences. If weather conditions are favorable at this time, money should circulate more freely. Trade in the east is about normal, while the prospects are very favorable as stocks are light. Orders for builders' hardware are improving, while ammunition is moving more freely. Egg crates, ice cream freezers, and wire cloth, are being booked for future delivery. Prices all the way round are unchanged. Collections are fair, and that conditions are improving in this direction can be judged from the fact that the financial situation is nothing like so prominent a matter of discussion as it was.

Builders' Hardware and Supplies — Sales so far are behind those of last year at the same time, but the prospects are favorable for a good spring demand, There is no doubt that in the large towns there is a growing need of warehouses, offices, not to mention dwelling houses, and builders should be exceptionally busy this spring. Locks and lock sets are moving well. It is a matter for congratulation that there is a growing tendency to do away with cheap articles for the higher priced and more endurable ones. For outside work plated steel goods have not proved a success, as in a short time the rust penetrates the plating. Prices are unchanged.

Railroad Supplies—The demand is fair for this time of the year. Hammers, picks, shovels and drill steel are moving better, and there is every indication that when full construction operations commence a more than average trade will be done. Enormous sums are to be spent this year in railroad work, and the hardware trade will benefit accordingly.

Lumbermen's Supplies—An improvement has taken place in these lines, and axes, boot calks, wedges, are moving well for immediate delivery. Cant-hooks and chains are being booked in small quantities for future consignment. Lumbering operations, this season, however, have not been up to average. A smaller number of men have been employed, and the output will be below the normal. Considering the conditions, the various lines have moved well.

Spring Goods—An indication of the approach of spring is the movement that is now commencing to take place in picks and sidewalk scrapers. Metal polishes are also selling, and another week or so should see the lines in full vigor.

Nails—The price of nails still remains at $2.35, but there seems to be a lack of certainty as to that figure. Stocks among the dealers seem to be light. The demand, which is at present fair, will, no doubt, increase when the market becomes settled.

Shot—Booking is light, and for the present sorting orders are the main feature. There is no change in quotations.

Bolts and Nuts—Business is fair, but there is no marked feature in the demand. Bolts for railroad construction are moving more freely. Stocks seem pretty full, and prices are unchanged.

Screws—There is no change in quotations. Orders for future delivery are showing greater strength, but it is too early to expect any decided movement. Makers have sorted up their sizes fairly well, but dealers should remember last year's experience, and be in good time with their orders.

Horse Nails—The Montreal Rolling Mills announce an alteration in their method of selling their nails. As jobbers are selling horse nails at a price per box, the Rolling Mills were requested to adopt the same course. In future, therefore, instead of nails being sold at so much per 100 lbs. for each size, they will be sold at a base price per 25-lb. box, the base sizes being 10, 11 and 12.

TORONTO HARDWARE MARKETS.

Toronto, Feb. 12.—Business has received a severe set-back during the past week owing to the heavy conditions which prevail on the country roads. The railroads are in operation again all over the province and communication which was discontinued for several days last week has again been re-established. The stormy period has, however, been succeeded by a lull which for some reason has caused a set-back to general business conditions which is being felt on all hands. The present condition is considered only temporary and business will likely go ahead again immediately unless again set back by severe storms. Collections through the country are average and continue to improve, which is very satisfactory to the jobbers who are beginning to talk of lessening the time allowed for the payment of notes from three to two months.

At present it is not considered probable that the full force of spring delivery will be felt until well on in March this year, a contrast to the same period last year, when delivery started in January. Building prospects throughout the country continue to brighten which is a good sign for future prospects. There have been few changes of note during the week, the price of wire nails has been arranged, and a revision has taken place on the prices of screen doors.

Nails—Price-cutting has ceased during the week and a satisfactory price has been arranged. The predicted drop has taken place and we now quote wire nails, 100-lb. kegs, at $2.30 base, f.o.b., Hamilton, London, Toronto, Brantford and Collingwood.

Rope and Binder Twine—The continued weakness in the hemp market has not led to any further reduction in the price of these lines. In local circles the revision is only considered temporary.

Bolts and Nuts—Some booking is being done, especially for lines used in bridge and iron work construction. The demand is fairly satisfactory at present and prices are being firmly maintained.

Screws—There is a small demand for common sizes at present and from indications trade will be speedily resumed. Some large orders for future delivery are being received and prices are firm. We still quote 85 and 10 per cent. on flat and 80 per cent. on round styles.

Lawn Mowers—Booking has received a good start and orders are commencing to come to hand for future delivery. Possibilities for future business continue to brighten.

Screen Doors—The prices of doors will be higher this year owing to the increased cost of labor and material. The advance is about $1.00 on most varieties.

MONTREAL METAL MARKETS.

Montreal, Feb. 14.—The leading feature of last week's markets characterizes the present situation. Tin in the Old Country continues to soar, while copper steadily sinks. The position is not one which commends itself to those anxious to see the markets established on a firm basis. Tin is evidently being bulled by speculators on an increasing demand, and although stocks apparently seem low, judging from the difficulty New York is meeting in getting shipments from London, there is no gauge

to the quantity of tin that is being held by interests in the Old Country and the far east. A large amount of metal may at any moment be thrown upon the market with disastrous results. On the other hand, the markets may be manipulated so well that any unloading may be carried on without bringing about a slump.

Copper is losing strength in New York. It stood well up to now the sagging in the Old Country, but a falling off in the export demand, as we anticipated, has weakened its position. Spelter is very firm just at present, and is the bright feature of the market this week. This metal has been selling at below cost of production so that it is time some change occurred. Pig iron during the week went up to 48s 7d, but eventually finished at 48s 1d, a good advance on last week.

Altogether, the market continues to be uncertain. The demand is improving all the way round, but the effect of this is lost in the speculative interests that are at work.

Pig Iron—Pig iron is dull and uncertain. Conditions in the United States have been practically unchanged during the past two or three weeks. Nominally prices have been well maintained but considerable cutting has been done in some cases for prompt shipment. The tonnage moving is not heavy, but it is showing an increase, and hopes are entertained that a considerable movement will be experienced in April and May. The English markets are holding firm under a somewhat better demand. The prospects for the steel trade in Great Britain are not promising, but the export demand for pig iron enables makers to hold the present prices. Locally there is a fair demand for cargo lots for immediate shipments. Heavy consumers are now coming into the market for spring and summer supplies and several good round lots have been closed during the past week. We quote: Cleveland warrants, 48s 1d; Middlesboro No. 1, $21.50, ex-store with a shading for large quantities for import; No. 3, $20.50; Summerlee, $25.50.

Copper—Copper in the Old Country continues to decline, and is now quoted at £59 7s 6d, a drop of £1 12s 6d over last week, which is a relatively heavier decline than was experienced the week before. The export trade from New York has fallen off, as was only to be expected, and the saving of the situation will be in the domestic demand in the primary market reviving sufficiently to hold prices. It looks under the circumstances as if, for some time, the foreign demand will be very light. Prices in New York are weakening and large lots are selling at ¼ to ⅛c off last week's ruling price. Locally, 15c is still obtained for small lots, but large orders are cut ⅛c.

Tin—Tin has advanced in the English market to £127 15s, which is an increase of £2 over last week. Speculative interests seem to be at present controlling the market, but against this there is a good demand ruling and that fact may hold the price from breaking badly. Stocks appear to be light, and there is no doubt that New York could take a lot more tin than it is getting at present. The effect of the high price of tin has advanced quotations locally, and we now quote 32½c, with prospect of a higher price.

Spelter—This metal is going ahead strongly after its great setback. There has been an advance of 30c East St. Louis, making the quotation $4.80, while in the Old Country the price is £20 12s 6d, which is an advance of 3s on last week. The demand is good and as stocks are low, higher figures will probably follow. Large interests in Belgium are controlling the market to advantage and this, combined with the curtailment of production in the States, makes the situation very promising. We still quote 5¼ for foreign and 5¼ for domestic, but anticipate higher prices shortly.

Lead—Lead has fallen slightly again, and is now quoted £14 10s. The market is on the dull side, but the impression that the spring will produce a good consuming demand still obtains and imparts an encouraging tone to the market. We quote $4.50 for imported pig.

Antimony—Antimony is without feature. The foreign market rules about £37 f.o.b., and we make no change in quotations. The demand is a fluctuating one, and not sufficient to have any great effect upon the market.

Old Materials—The market is without change and there is very little buying being done. We quote: Heavy copper and wire, 11½c; light copper 10c; heavy red brass 11c; heavy lead 2¾c; wrought iron $12; No. 1 cast $13; No. 2 cast $10.

TORONTO METAL MARKETS.

Toronto, Feb. 14.—Speculation continues to create price changes in foreign markets, the fluctuations in some cases being as much as from £2 to £3 in a day. A week may see prices advance and lower this much a couple of times. The market in Toronto cannot be expected to follow these sharp changes and fluctuations, so, despite seeming excitement in London or New York local conditions show little change.

Business is improving and jobbers report some fair-sized transactions during the week. Buyers who have been holding off seem inclined to come into the market, and February totals, short month though it is, should show a material increase over January. Prices, as said before, show little change.

Pig Iron—There is little life in this market and merchants are making no effort to force business by price-cutting. We still quote, $21 for No. 3 Middlesboro, and $22.50 for Canadian iron.

Copper—No change is reported, with from 14½c to 15c quoted for casting ingots.

Tin—Wide fluctuations have been reported from London, the market being firmer. We still quote 31c, however.

Lead—The English markets have weakened slightly, but our quotation of $4.35 still stands.

Spelter remains unchanged at $5.25 for foreign, and $5 for domestic.

Old Materials—The market is lifeless, with dealers buying very little.

U.S. IRON AND METAL TRADES.

New York, Feb. 13.—The Iron Age says: The ore firms at Cleveland, who find their market largely among the merchant blast furnaces of Ohio and Pennsylvania, have fallen in with the general movement of producers of pig iron and steel. The decision reached at Friday's meeting at Cleveland that no reduction from last year's prices is advisable for 1908 marks a departure in the lake ore trade. Ore buying was not expected to follow it, and time must be given for any effect of the action to appear farther down the line. That it will be an off year in ore is a foregone conclusion, and thus the hunt by consumers for other than lake sources of supply may not be vigorous. At present Lake Superior ores are being turned into pig iron at about 40 per cent. of the rate at which they came down the lakes last year. Not a few furnaces have ore in their yards or on dock at Lake Erie sufficient to last them into next fall.

Apart from the ore meeting interest has centered this week in a conference of pig iron producers of the central west and the Chicago district, held at Cleveland Saturday. The previous effort in this territory to maintain a stable market had not been successful. Some of the causes of irregularity have now been removed, and the furnace companies expect the action of the ore men to be of some avail in holding prices on a $17 valley basis for No. 2 foundry iron. Reports of price cutting in central territory, both on northern and southern pig iron have been rife of late, but new business actually showed a shrinkage from the January rate. The fact that stocks increased somewhat last month, with production of non-steel making irons less than 40 per cent. of the usual is significant.

Southern makers have of late received less than their usual percentage of orders in foundry and forge grades. All pig iron markets have been dull, in fact. In the east pipe makers have been buyers on a moderate scale, as they have been at intervals for some time.

The Pennsylvania Railroad's rail order for 1908 has been placed, 55,000 tons being distributed among four mills. The question of discard is not a factor. The mills are asked to furnish some open hearth rails on this order, but none is now prepared to do this, though the Steel Corporation expects to roll such rails at Gary in September. Two rail contracts for about 60,000 tons each are about closed, and other roads are expected soon to fall in line. In light rails the mills have done a surprising business.

In general, finished lines have shown some improvement upon January, even though slight, and January in turn was better than December. Consumers of important products into which iron and steel enter are yet to pass on prices, which thus far have not been seriously tested.

The wire and tin plate trades still lead in activity. Of the latter product important consumers predict a consumption in 1908 not far from that of last year.

Wrought pipe mills have found it necessary to increase their active capacity. The Lorain, Ohio, plant of the Steel Corporation, has started up in the past week.

Railroad bridge work in the west amounting to 7,500 tons has been booked, but current business is less than 25 per cent. of the fabricating capacity of the country.

Considerable buying of cast iron pipe is reported, about a normal business for February being done. New Britain opened bids this week on 8,000 tons, and 4,000 tons will be wanted for Cuba. Indianapolis, Ind., has just bought 4,000 tons.

Quebec and Maritime Provinces

Retailers at Halifax to Form a Protective Association—Large Lumber Mill Burned Near St. John.

HALIFAX.

Halifax, Feb. 10.—With the approach of spring business brightens up, and the hardware travelers now on the road are sending in good orders. The prospects appear very bright and the jobbers anticipate that trade will be fully up to the average. Prices throughout the list are steady, though there is some talk of a revision, which, however, will, it is anticipated, not be very great, if it does take place. There is a fairly good demand for ice tools, now that the annual harvest is on.

* * *

The Nova Scotia Mining Society will hold its annual meeting in this city on March 25 and 26.

* * *

Hugh E. Matheson, president of the Middle River Gold Mining Company, reports that good progress is being made at the company's property and that the prospects are excellent. The first shipment of gold from the company's ore has been made to New York. A number of improvements have been made at the mine recently, including the installation of a ten-stamp mill.

* * *

William Madden, general manager of the Canadian Consolidated Coal Mining Company, Richmond, C.B., has left for Philadelphia to attend a meeting of the directors in that city. After the meeting he will proceed to Delaware, to examine some mining propositions in which his company is interested.

* * *

Work on the new areas of the Dominion Iron and Steel Company at Port Marien is progressing rapidly and the company is meeting with splendid success. The coal is said to be a superior kind and while the report of the analysis on the last lot of samples has not yet been concluded, it is thought that the coal will be found suitable for metallurgical purposes. Should this be the case a line of railway will eventually be built from the mine to Sydney, a distance of twenty miles, and the work will start in the near future.

* * *

A meeting of the retail merchants of this city was held at the board of trade rooms last week to consider the credit system in vogue in Halifax. The meeting was largely attended by merchants representing the various lines of trade. The matter was discussed at length but no definite action was taken. It was found that there was no one system which would be applicable to all the interests represented. It was decided to call separate meetings of the different trades and to elect a chairman at each meeting, who would represent the different branches of the retail trade at a joint meeting to be called later. It is probable also that a Retailers' Protective Association will be formed, as it was stated that this organization has proved its usefulness in other cities.

* * *

Locally trade is very quiet just at present. Some of the retail men who are handling wrecked goods from the steamer Mount Temple, and have bargain sales on are doing some business in small lines, but otherwise things are considered pretty quiet. No traveling salesmen representing firms handling barbers' supplies need come to Halifax for years as the market is flooded with Boker's razors of all grades. Hundreds of these razors were salved in good condition and as they sold for about one-quarter of their value, no difficulty was found in disposing of them. It may be said that razors are a drug on the market at the present time. Hones, knives, scissors, wrenches of all kinds, clippers, cleavers, nippers, etc.,, are offered for sale, and there is such a large quantity of them that it will be some time before the market is cleared up. The fishermen will soon be ordering their supplies for the opening of the spring fishery, and this will brighten up trade.

ST. JOHN.

St. John, N.B., Feb. 11.—Business here for the month of January was very encouraging. With nearly all the dealers it was ahead of the same month last year, which is considered very satisfactory in view of the "hard times" reports that were so prevalent recently. The outlook so far this month is not quite so bright, but this is due in a measure to heavy storms which have interfered greatly with the movements of the traveling men. Shipments from the manufacturers show a marked improvement and goods are now being received in pretty good time, which indicates that the factories are not so rushed with orders as was the case last year. The dealers here are not looking for any great reduction in values, but a strong resumption in business is anticipated when spring opens up.

Collections have not been as good as might be wished and many are asking for renewals. On the whole, however, there is no reason to get discouraged, but to push things for all they are worth.

One of the dealers in conversation with your correspondent said he thought there was no reason to take a pessimistic view of the situation, as business was in a very satisfactory state now. He referred to an item he had read in a N. S. hardware journal to the effect that one of the big hardware firms in the south was putting on twenty-five additional travelers. This, he argues, did not look like any dropping off in business. A number of the leading manufacturers and merchants who have received notice from the Dominion Coal Co. that the price of coal is to be advanced 25 cents a ton are not any too well pleased. They point out that the price should be decreased rather than increased. The higher rate asked for the coal will increase the cost of production for the manufacturers with but little likelihood of their being able to make it good from their customers.

* * *

At the annual meeting of James Pender & Co., on Feb. 6, G. S. Fisher was re-elected president, with the same board of directors. Reports submitted showed that the company had a successful year's operations. It is stated that the board decided to practically renew the galvanizing plant, but beyond that no changes are contemplated.

* * *

The creditors of the A. W. Wright Lumber Company have decided to bring the books of the company to this city so that those interested may examine. Tenders for the property are to be called for.

* * *

The large sawmill in course of construction and almost completed, owned by the Louison Lumber Company, at Jacquet River bridge, was totally destroyed by fire Feb. 2. The fire is supposed to have originated by a quantity of lime in the basement getting wet. All the machinery is of the modern pattern, being imported from the United States. The loss will probably reach $25,000 or $30,000.

* * *

The annual meeting of the Alexander Gibson Railway Manufacturing Company was held at Marysville, Jan. 30. Alex. Gibson, sr., was elected president; Alex. Gibson, jr., vice-president; Col. Hugh H. McLean, secretary and treasurer.

Alex. Gibson, sr., Alex. Gibson, jr., F. D. Widder, John S. McLaren and Col. H. H. McLean were elected directors.

* * *

The Dalhousie Lumber Company disposed of their property to the St. Maurice Lumber Company of Three Rivers, Que., not the International Paper Company, and this company is now in control. The St. Maurice Lumber Company, however, is one of the subsidiary concerns of the International Paper Company, as the International Paper Company magnates own the majority of the stock. The new owners of the property are preparing to erect mills on the property which will cost upwards of $150,000, and the work will be rushed along during the coming summer. It is the intention to instal band saws and rossing machinery as well. The International Paper Company will take the entire output from the property in question. Most of the cut will be used for pulp wood.

* * *

J. Sutton Clark's new fish curing factory at North Head, Grand Manan, was blown down in the big gale on Sunday, Feb. 2, and totally destroyed.

EVILS WHICH ABOUND IN SUBSTITUTION.

It frequently happens that when a manufacturer brings out a rapid-selling or popular article, it is copied by some other manufacturer, and the latter may be able to put it on the market at a price a little less than the original. When the customer calls for the original article, the substitute is handed to him, in many cases with the remark, "Just as good and a little cheaper." This filching of ideas from one manufacturer by another is sometimes called piracy, and some manufacturers seem to think any article not protected by patents can be copied by them without any regard for the makers or original. This piracy usually takes place after an article has had a great demand created for it by the ingenuity or shrewdness of the original manufacturer, when the pirate comes along and takes it. A reputable manufacturer is clearly above such practice, preferring to win reputation and trade for products of his own creation.

Told by Ontario Correspondents

Guelph to Have a New Fine Hall—Galt Retailers Will Oppose the Co-operative Stores' Bill—Building Prospects at London Considered Bright—Machinery Factory to Re-open at Peterborough—Important Proposal of Kingston Dealer.

KINGSTON.

Kingston, Feb. 11.—The hardware business in Kingston continues quiet at present. The farmers in the surrounding district have been blocked by the snow storms and have in very few cases been able to reach the city during the past week. A local dealer made the remark that it was the quietest time he had experienced since he started in business in this city. Merchants are, however, hoping for a brighter outlook with the opening of spring. He said he would be very much pleased to learn of the hardware merchants combining as did the shoe merchants and some of the gent's furnishings' departments of this city a few years ago, and carrying a motion to the effect that all business should be transacted on a strictly cash basis, as he says, when they give a man six months' credit he considers it an insult to be asked to settle the account and takes his trade elsewhere, while they have to settle all their bills as they come due.

* * *

Henry P. Smith, architect, is preparing plans for the erection of an orphanage and a novitiate building at St. Mary's-on-the-Lake, property owned by the House of Providence. The latter institution requires more room, and it has been decided to build on the King St. west property. Already work on the excavation has begun.

* * *

Kingston lost another of its old residents last Friday in the person of Mrs. W. K. Routley, mother of Arthur K. and Alfred Routley, sporting goods merchants of this city. Deceased was seventy-five years of ago and had been ill for some time.

* * *

Last week was a notable one for weather records in Kingston. On Thursday the lowest temperature in five years was registered, when the mercury got down to thirty degrees below zero, and on Saturday morning the biggest snow storm in as many years ocurred. Roads and walks were completely snowed in and the people are not anxious to experience many more such cold snaps again for some time, as it was very severe on their water pipes and coal bins. It was a busy week for the plumbers. "For the past few days we have been rushed very hard with orders," said one plumber when asked about the cold snap. "They have been coming in so fast that it is impossible to give them immediate attention, we take the orders in and do the best we can, but it is certainly keeping us hustling." "I have been on the jump all day," said another plumber who was wending his way up the main street on a hurry-up call. Generally the plumber has been the busiest man in town for some months.

* * *

Business in all lines has been exceptionally quiet the past month and hopes are entertained that the trade will brighten up again to some extent in the near future. This is the dullest time of the year and the merchants had been expecting quiet times, but had not looked forward to as great a falling off as there has been the past few weeks. Most of the hardwaremen have been busy preparing for the spring trade and are now laying in their stocks for the coming season. A great deal of attention has been given to their window displays which have been chiefly of seasonable goods. A good showing of skates, hockey sticks and numerous other sporting articles have been made.

* * *

The plumbers have been in great demand all the past week, owing to the very cold, stormy weather.

* * *

W. F. Kelly, of Oil City, Pa., was in Kingston last week for the purpose of establishing his headquarters for Ontario. His oil house will be known as that of W. F. Kelly & Co., importers of refined oils and gasolines. He has taken the office in R. H. Foye's building on the corner of Clarence and Ontario Streets. W. S. Grant, of this city, will act as agent for this district.

* * *

W. W. Fraser, formerly employed by W. B. Dalton & Sons, hardware merchants of this city, died at Sydney, N.S., last week. Deceased was a brother of Captain Robert Fraser, Marine Superintendent of the Montreal Transportation Company, and was twenty-five years of age. He was well known in this city, where he spent a number of years, having left here only about a year ago. His many friends will hear of his demise with great regret.

PETERBORO.

Peterboro, Feb. 12.—The Rapid Tool Company, of this city, suffered $16,000 loss from fire on Saturday night. The flames were first noticed when a blizzard was raging and at first it was thought that it would be impossible to save the plant. The fire brigade did good work, however, and succeeded in confining the fire to the stock room. The damage resulted largely from the destruction of a large quantity of augurs that were awaiting shipment. The loss is practically covered by insurance and the plant is again in operation as usual.

* * *

The annual meeting of the Peterboro Lock Company was held on Wednesday afternoon. The report covering the operations for the past year showed a most gratifying state of affairs, the plant having been run to its full capacity for the entire twelve months. The officers and directors were all re-elected as follows: Hon. President, Senator Cox; President, J. R. Stratton; Vice-president, W. G. Morrow; Managing Director, T. H. Fortye; Secretary-treasurer, E. H. Howson; Directors, A. L. Davis and Wm. Irwin.

* * *

The plumbers have been kept busy during the past few days owing to water pipes freezing as a result of the extreme cold. In some cases the water supply was shut off from houses for several hours while repairs were being made.

* * *

The efficiency of the local fire brigade is to be increased by the purchase of a thousand feet of new hose and considerable other equipment. The city council has decided to purchase the hose from local hardware dealers and prices are now being received. In past years it has been the custom to purchase the hose direct from the manufacturers, but it has been ascertained that it can be secured in the city for practically the same cost.

* * *

The head office of the Lakefield Portland Cement Company is being transferred from Lakefield to Montreal. The office staff have been removed to Montreal but there will be no other changes.

* * *

The train service here was badly tied up at the week-end, owing to the unusually severe storm. The street railway company managed by hard work to keep its cars in operation without interruption.

* * *

The retail men report business quiet during February but well up to that of former years. They are looking forward to a brisk spring trade.

* * *

There is every probability that an agreement will be reached between the city council and the A. R. Williams Machinery Company, of Toronto, whereby the latter will take over and operate the plant of the William Hamilton Co., which has been practically closed down for the past three months. The Williams Co. made a proposition to the city and it is understood that arrangements are almost completed for the reopening of the works. Over a hundred men wil be given employment.

* * *

Hardware men here have experienced some inconvenience during the past week owing to non-arrival of goods,

caused by the delays in railway traffic as a result of the storms. Merchants in all lines have been affected in the same manner.

* * *

The Campbellford town council has entered into an agreement with the Canadian Steel Rolling Mills Company, by which the town will give the council five acres of land, exemption from taxes with the exception of school and local improvement tax, and furnish it with 1,000 horse-power at $10 per h..p per year for ten years. The company will engage in the manufacture of sheet and bar iron and will employ not less than 100 hands for at least ten months per year. The company negotiated with the Peterboro council before going to Campbellford but could not make satisfactory arrangements.

HAMILTON.

Hamilton, Feb. 11.—One of the most interesting items in the hardware line in Hamilton this week has been the Made-in-Hamilton exhibit being held by the Stanley Mills Company. This firm while carrying on a department store business, centres a great deal of attention on the hardware department, and in the exhibit it is doubtful if the hardware stock is not the most interesting. In all, seventy firms have exhibited their goods, and in the hardware exhibit the process of manufacture of knives, spoons, scissors, etc., is shown in the various stages. The display of the Hamilton Steel & Iron Company shows the metal from the iron ore until it is produced in pig iron, and then as it is made by other concerns into various articles. The Meriden Britannia Company has a somewhat similar display in the silver goods, and other firms represented were: The Ontario Lantern and Lamp Co., Hamilton Bridge Works, Smart-Turner Machine Co., Canadian Westinghouse Co., Canada Steel Goods Co.,, Banwell-Hoxie Wire Fence Co., International Harvester Co., Burrow, Stewart & Milne, Canada Shovel & Tool Co., Gurney-Tilden Co., the B. Greening Wire Co., and Chadwick Brothers. The exhibit, besides being of local interest, should also prove of interest to merchants in other cities, where such exhibits are an unknown quantity. This is the third year that the Mills firm has held the display and it is becoming better every year.

* * *

Chas. W. Meakins, head of the firm of Meakins & Sons, of this city, died here last week, after a brief illness. He was 76 years old and had been a resident of Hamilton for 57 years. At one time he kept a furniture business, but for the last thirty years was identified with the above brush company. The firm is well known to the hardware trade in Ontario.

* * *

Local hardware men have hopes of securing the convention of the Retail Hardware Association for this city next year. If their efforts to switch the convention this way next year succeed at the meeting in Toronto this week, the Ambitious City hardware dealers promise to do things up brown for the occasion and incidentally show the visitors that Hamilton is truly a hardware city.

The Dominion Power and Transmission Company has decided to make an addition to the new terminal station, at a cost of $1,000. When the place was built recently no provision was made for a parcel and check room, and the new addition will be made partly for this purpose.

* * *

The heavy snow storms during last week have had a bad effect on the wholesale trade, many of the small railway branch lines having been blocked for nearly the whole week, thus delaying the shipment of goods and tying up many of the travelers.

* * *

The Toronto Exhibition directors have awarded the Hamilton Bridge Company a gold medal as a token of appreciation of the fast and excellent work which it did in constructing the new grand stand at the exhibition grounds. The local firm contracted to build the stand one month quicker than any other firm, and it beat this promise by one month. The stand is made to accommodate 15,000 people and the iron used in it weighs 3,000,000 pounds. If placed end to end the girders would be 33 1-3 miles long, and if made into rails would make a track 42½ miles long, more than the distance between Hamilton and Toronto. The company also built the new horticultural building, and the new bridge for the C.P.R., which spans the town of Parry Sound.

* * *

The Petrie Manufacturing Company, makers of cream separators, etc., has decided to erect a warehouse in Regina in the spring. The building will cost about $5,000 and will be erected to complete the company's chain of distributing houses in the west. At present they have warehouses at Winnipeg and Calgary. The factory in this city is working full strength, despite the condition of unrest in the labor market throughout the country.

GALT.

Galt, Feb. 11.—Trade during the past two weeks has been satisfactory, although the recent storms interfered seriously with the country trade. Hardware merchants are confident that with the opening of spring the general outlook will be greatly improved.

* * *

A break in the pipe line of the Dominion Natural Gas Co. on Monday caused great inconvenience to those who depend solely on this source for heat.

* * *

"We are working overtime to get out a large rush of orders," said a member of the Canadian Brass Mfg. Co., to your correspondent. This firm, which has been established in Galt for only one year, is rapidly coming to be regarded as an industry of much importance.

The hardware dealers are taking an active interest in opposing the proposed co-operative store bill, and in all probability will act in conjunction with the Retail Merchants' Association in endeavoring to prevent the bill becoming law. It is considered to be detrimental to fair and above-board competition.

A number of hardware travelers were snowbound here for a couple of days last week.

The thermometers in Galt have been hovering around the zero mark for about a week and the plumbers are kept busy with frozen and broken water pipes.

The board of trade has several prospective industries in view.

GUELPH.

Guelph, Feb. 11.—The tremendous blizzard that struck the whole Province last week completely isolated Guelph from all surrounding points, and trade was almost at a standstill. The only farmers who could come into the city were those who lived within a two-mile radius, and, as a consequence, the country trade was interrupted. However the abundance of snow has greatly enthused the snowshoe as a means of travel, and the trade has been brisk. Snowshovels have also been in great demand, and sporting goods have sold rapidly.

* * *

In last week's correspondence it was reported that N. L. Stewart, manager of the Guelph Stove Co., had resigned his position. Under his management the business of the company has been greatly developed. There is a large and fast growing demand for the various products of the firm's manufacture, and its future is assured. It is understood that one of the directors will assume the management, with a practical superintendent in charge of the mechanical department.

* * *

Should the Government make the proposed extension into the market of the Winter Fair, it is altogether likely that a new fire hall will be built on the property of Hamilton's Marble Works.

* * *

The Wellington Hotel, which has for so long been the favorite stopping place of many commercial travelers, has been sold to a local syndicate. Extensive alterations will be made, including the installation of an electric elevator, and the removal of the sample rooms to the attic. Travelers will be pleased to know that Mr. Rutter, the former proprietor, will remain in charge as manager.

* * *

The single men of the J. B. Armstrong Mfg. Co. defeated the married men in a hockey game by 3 goals to 2.

* * *

N. Knaftel, traveler for the Bond Hardware Co., has resigned his position, and will take a responsible position with Lewis Bros., hardware merchants, in Montreal. His place on the road will be taken by Fred Reid, who for the past two or three years has been in the retail department of the Bond Company. Mr. Reid has always been most efficient in that department, and, no doubt, will be just as successful in his new work.

* * *

The incorporation of the T. E. Bissell Co., Limited, Elora, with an authorized capital of $150,000 is announced in the last issue of the Ontario Gazette.

* * *

A local syndicate has been formed to build a new hockey rink, on the pro-

perty adjoining the separator shop of the Raymond Mfg. Co., during the summer months, in preparation for next winter.

* * *

W. G. Howell, chief clerk for the Bond Hardware Co. is in Toronto today.

* * *

A number of the local hardware firms are engaged in stock-taking at present.

* * *

A 10-cent window of the Bond Hardward Co. is attracting a good deal of attention and bringing in some extra trade during the slack season.

LONDON.

London, Feb. 11—Seasonable quiet continues in wholesale and retail hardware circles. The snow blockade of last week had a bad effect on trade conditions. There is one feature of the business situation, however, which is regarded as gratifying, and that is the almost entire absence of cancellations. "Our bookings for spring," remarked a representative of a large local jobbing house, "are larger than ever known, and yet I do not know of two cancellations. And you must remember that these orders cover transactions included in the business of almost a year. That, I think, does not show lack of confidence on the part of the retail trade."

* * *

The Scott Machine Company has just shipped another of their L. & K. test boring machines ordered by the Dominion Government. This one goes to the lighthouse department at Prescott, Ont.

* * *

The Canadian Fire Engine Company, Limited, of this city, has made an assignment to the Canada Trust Company for the general benefit of its creditors, a meeting of whom is being held to-day. Liabilities and assets are not stated.

* * *

Soper & Livingston, general merchants, Alvinston, have assigned to C. B. Armstrong, of this city. Liabilities about $20,000, with assets approximately the same.

* * *

A local architect declares the building outlook for the city the coming season to be very good, the time of year considered. As yet it is early to form an opinion, but from the number of inquiries which are being made it seems not improbable that there will be a large number of residences erected, as well as factories and warehouses. The city will expend a considerable sum for new fire halls, and the new hygienie institute and the hospital for consumptives are also buildings in prospect. The new Smallman & Ingram retail store should also be included among the buildings for this season, since the major portion of the large addition to the retail section remains to be built.

* * *

In an interview here W. T. Dockvill, traveling representative of the C.P.R. passenger department, spoke most optimistically as to the outlook. "I think we will have as good a season this year in the west as we had last year," he said. He does not think the fate of the crops will affect travel in the west. He added, "Inquiries are about up to the average, and I should judge that we will have as many intending settlers from here, and from the immigrants who come into the country, for Northwest points as we have had in a good while."

CHATHAM.

Chatham, Ont., Feb. 12.—The Wolverine Brass Factory commenced operations on Monday with a complement of about 25 hands. President L. A. Cornelius and Architect S. E. Osgood took over the factory last week. Mr. Clark, Government Factory Inspector, Toronto, who was here at the time, stated that the factory was one of the best constructed west of Toronto.

* * *

Another new industry is definitely in sight in the shape of a box factory. The man behind the concern is W. M. Drader, the well-known hoop, stave and lumber manufacturer. Mr. Drader proposes to build a box factory on the flats at the north side of the river, in the vicinity of the Chatham Wagon Company's plant. He has asked the city for the privileges of running a railway spur down Vanallen Ave. to the prospective site. The two property owners interested, however, object, and the council is endeavoring to secure for Mr. Drader the privilege of using the Wagon Company's switch. The latter concern are understood to have demanded a heavy rental, and guaranteed the use of the switch only for one year. It is to be hoped that the difficulties in the way will be speedily obviated.

* * *

The long promised five and ten cent. store concerning which there was quite a bit of talk last year, will materialize on April 1. Messrs. Brewster & Company, of London, St. Thomas and other places, are behind the new enterprise. They have leased the premises hitherto occupied by Taylor & Williamson's grocery. The present store will be thoroughly renovated, a modern front installed, new floors put in, and the premises made thoroughly up to date in every respect.

* * *

Angus Groff, representing Cluff Bros., Toronto, called on local hardware men this week.

The intense cold during the past few weeks wreaked quite a bit of destruction through the bursting of water pipes. The plumbers have, as a result, reaped a small harvest.

Is your partnership registered as required by the Provincial Act? If not, it might be expedient to have the little formality attended to.

It may not be generally known, but where one or more persons carry on business under a firm name, a declaration containing full particulars as to the personnel of the firm has to be filed with the registrar of deeds within six months from the time the firm commences business. Otherwise, the members of the firm are liable to a fine of $100, half of which goes to the Crown and the other half to the party laying an information against them.

This warning is timely in view of the fact that a writ was recently issued against Clark & Company, of Harrow, for failure to comply with the act. Some time ago there was quite a furore in St. Thomas, when an enterprising gentleman set out to make an honest living by laying information against firms which had failed to register.

* * *

A number of business men intend putting in a private system of electric lighting. In addition, the Electrical Development Company, of Cobalt, have opened negotiations with a view to securing a franchise to supply power for lighting and heating. The town council have invited the company's representative to visit Leamington and discuss the matter.

West of the Great Lakes

Big Industrial Progress of British Columbia—Saskatoon's Industrial Campaign.

SASKATOON.

Saskatoon, Feb. 8.—Last week the curling bonspiel came off and many of our merchants took advantage of the lull in trade to take part in the roarin' game. Competition was keen and "sweep 'er up" was the war cry of the day. Recreation as well as association work helps to keep our merchants on the friendliest of terms. Hardwaremen noticed on the ice by your correspondent were W. Hopkins, D. M. Leyden, M. Isbister and S. Kempthorne.

* * *

A new fire engine purchased by the city, has been set up and given a satisfactory test. Every one should feel safer now this addition has been made to the fire brigade. It was found necessary to engage an engineer, and Mr. McLean was appointed.

* * *

Again Cairn's specials have been defeated by the Prince Albert team, this time on their own ice. The score was 7-6.

* * *

The ice on the river is twenty-six inches thick and yet we have not suffered any inconveniences from cold weather. From all accounts the Eastern Provinces have come in for the lion's share of bad weather this winter.

* * *

The officers of the Board of Trade have settled down to business with energy and determination. It is felt that the time has come for beginning an aggressive campaign in the interests and

business welfare of the city. Letters of inquiry are being received from Eastern concerns who are looking for suitable centres to locate in, and these communications will be dealt with by the publicity committee in a businesslike manner. The city council will be approached for the sum of $6,000 to carry out a programme on a much larger scale than was attempted last year. A strong effort will be made to let the outside world see the unique position Saskatoon possesses as a manufacturing and wholesale distributing point. Much progress has been made by the city during the last year or two, but it is felt that there are greater things in store for the Hub of the hard wheat belt. It is capable of rapid development, situated as it is on three trunk railways which penetrate in all directions, and a rapid flowing stream which can be utilized for power purposes. The location of the town, too, in central Saskatchewan and other aspects, will be taken up by the publicity committee, and stated clearly and convincingly should be the means of locating many wholesalers and manufacturers here during the coming season.

* * *

This week the firm of Clare & Young will undergo a change. The general business has been bought by B. A. Archibald & Co., and when your correspondent called all hands were busy stock-taking. The business is composed of hardware, groceries and dry goods, each class of goods having a different section to themselves. Mr. Archibald, who is to manage the business, is well qualified, having had fifteen years experience in Halifax, N.S.

* * *

The Western grain growers will hold a conference here during February, when some matters of importance in which farmers throughout the Province are interested, will come up for discussion. All farmers should avail themselves of this opportunity to form a strong organization and go thoroughly into the wheat marketing problem. One phase which is sure to come up for consideration is the matter of grading the wheat as there was a good deal of dissatisfaction regarding this last fall. Central Saskatchewan embraces the largest wheat growing area in the Dominion, and if any beneficial changes are to take place it will be necessary to have complete organization.

* * *

It is gratifying to note the progress made by the C.P.R. in Saskatoon within the last few months. Less than a year ago the present site of the station and freight sheds was bare prairie, and these buildings are now almost ready for occupation. They are not of a temporary nature either, but combine taste and stability, and are thoroughly modern. Work is still pushed on at the bridge over the Saskatchewan, and soon the concrete piers will be ready for the steel. Several carloads of steel have arrived, and the Canada Bridge Company are making ready to begin operations. The steel work will take several months to put in place. The Canada Bridge Company are at present engaged on the superstructure of the Grand Trunk Pacific bridge here, but it is expected that they will finish this contract in two months. Track laying on the Grand Trunk will then be pushed west with all speed, for which ties, rails and other materials are collecting here.

* * *

At the Canadian Northern Railway roundhouse a number of tinsmiths are fixing up the dust pipes this week.

* * *

On Wednesday Cairns' hockey team went north to Prince Albert to have a friendly game, but got beaten by the home team. The score was 7-3.

* * *

A new fire engine ordered by the city some time ago has arrived, which will considerably increase the fighting powers of the fire brigade.

CALGARY.

Calgary, Feb. 3.—Some little publicity has been given to Linton & Hall and A. McBride & Co. in your valued publication lately, from the fact that the employes of the above firms have been "following the puck," writes "Turps" to Hardware and Metal.

A. R. AUGER, CALGARY.
"The Safest Hockey Goalkeeper that Ever Came Out of Ontario."

"Your paper said that up to date you had not heard from the other firms, of which ours (C. F. Cromer estate) is one. Now, what the writer wishes to say is that Linton & Hall's team would never have won the games they did had it not been for the able work done by G. D. Connell, a former star in the hockey world in New Brunswick, and A. R. Auger, the safest goalkeeper that ever came out of Ontario, both of whom are of C. F. Comer's staff.

"As the staff of Comer's hardware is not sufficiently large enough at present to form a team, it can be safely said that this outfit has done its part."

VANCOUVER.

Vancouver, Feb. 7.—After the good season of 1907, the slackening in business has been particularly apparent, and although the prospects for 1908 are very good, they do not compare favorably with last year. In discussing the situation, a well-known local hardwareman stated that while the business is not anticipated to be up to the mark of the preceding twelve months, still it is good, and the outlook is very favorable. Railway construction is bringing trade, and from up the coast, where a new country is developing there have been many inquiries. The calls for builders' hardware are keeping up well. Saw mills have been inactive this winter, with the result that the demand from this source is not as good as usual. Overhauling has been going on, and repairs have necessitated some business. Taken altogether, the general condition is satisfactory.

A peculiar circumstance will make a difference to the stove manufacturing business in Vancouver this year. Owing to the impossibility of getting stove mounters, the Vancouver Stove Works has decided not to manufacture stoves this year. They have advertised locally and in the east, but no replies have been received, and as these men are a necessity if the work is to be proceeded with, the stoves will be laid aside for the present. Not that there is no demand for them. On the contrary, the manager of the company stated this morning that they had no stock on hand, but under the circumstances no other action could be taken. It is understood that in Victoria, where another stove manufacturing company is located, that they have their complement of mounters.

The Vancouver Stove Works, prevented from carrying on their special line, will direct their attention to the manufacture of hardware for builders. They have been producing these lines during the past year, but during 1908 will have their full force at work on it.

* * *

Building is good in all the coast cities. In Vancouver, the permits for January were over $350,000, as compared with $187,000 a year ago; in North Vancouver a large increase is noted for 1907; in Victoria, the progress is considerable, and in New Westminster there is activity. Improvements are going up on all sides.

* * *

In railways, there will be considerable doing. This is apart from the general construction of lines like the V.V. & E., of the Grand Trunk Pacific, or the lines proposed in southeast Kootenay. In Vancouver, the B.C. Electric Railway Company has double-tracking on its list, as soon as it can be got on with, and in Nelson an extension of the tramway system is suggested. The C.P.R. proposed to spend about $50,000 in Fernie in the spring on new trackage and other necessary improvements.

* * *

Referring to Fernie, brings to mind the fact that the doubling of the customs receipts at Nelson for January was principally due to the importing of large quantities of machinery for use in the developing of the coal mines in the Crow's Nest district. The C.P.R. is opening a large mine at Hosmer, and the Crow's Nest Pass Coal Company is

adding to its assets. But then several Spokane people are interested in more than one coal company which is either starting operations or has started, and, of course, it is only natural that they should purchase their supplies in their own country.

* * *

The machinery for the new G.T.P. steamer, which will ply on the Skeena river, will be furnished by the Polson Iron Works, of Toronto. The construction of the new boat will be done by Alex. Watson, of Victoria, the total cost being about $30,000.

* * *

The Board of Works of the Vancouver city council had considerable discussion over the efficiency of pipes for plumbing purposes, whether oiled pipes or tarred pipes gave the best results. Mr. Weeks, one of the plumbers, stated that one of the objections to oil pipes was that they had to be brought from across the line, as bringing them from Toronto meant a delay of three or four weeks. Eventually the decision reached was that no oil pipe should be used as a soil or waste pipe, which shall weigh less than the following per foot: Two inches diameter, 4 lbs. per foot; 3 inches, 6 lbs.; 4 inches, 9 lbs.; 5 inches, 15 lbs.; 6 inches, 20 lbs. All soil pipes, waste pipes and fittings for interior work, shall be coated with asphaltum or oiled, and for exposed work they shall be immersed in linseed or vegetable oil; all underground shall be coated inside and out with asphaltum.

SALE BY TENDER

Stock of Shelf and Heavy Hardware, Furniture, Etc.

Sealed tenders will be received by the undersigned at their offices, Bank of Hamilton Chambers, Main St., Winnipeg, up to noon, Wednesday the **19th day of February, instant**, for the stock of shelf and heavy hardware, furniture, etc., belonging to the Estate of Hunt Bros., Vermilion, Alta., as follows;

Stock of Shelf and Heavy Hardware, Furniture, Etc., as per Inventory.	$9,353.76
Fixtures as per list.	663.60
	10,017.36
Book accounts as per list.	472.55

TERMS: Cash or quarter cash, balance 2, 4, and 6 months, with interest at 7 per cent. secured. The highest nor any tender not necessarily accepted.

The stock can be seen on the premises at Vermilion, Alta., and the inventory and any information required, obtained at the offices of the undersigned.

Assignees and Accountants

Winnipeg, Feb. 8, 1908

CONDENSED OR "WANT" ADVERTISEMENTS.

RATES.

Two cents per word first insertion; one cent per word subsequent insertions.

Five cents additional each insertion where box number is desired.

Contractions count as one word, but five figures (as $1,000) are allowed as one word.

Cash remittances to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

RULES FOR COPY.

In addressing replies care of HARDWARE AND METAL don't fail to give box number.

Replies addressed to HARDWARE AND METAL boxes are re-mailed to advertisers every Monday, Wednesday and Friday.

Requests for classification will be followed where they do not conflict with established classified rules.

Orders should always clearly specify the number of times the advertisement is to run.

All "Want" advertisements are payable in advance.

AGENTS WANTED.

This is the problem of many manufacturers who are anxious to get a foothold in Western Canada. It will be easily solved if HARDWARE AND METAL is given the opportunity to solve it.

AGENT wanted to push an advertised line of Welsh tinplates; write at first to "B.B.," care HARDWARE AND METAL, 88 Fleet St., E.C., London, Eng. [tf]

Green Wire Cloth—$1.75 per 100 square feet.

Coil Chain—¼-in., $7.25; 5-16, $5.75; ⅜, $5.25; 7-16, $5; ½, $4.75; 9-16, $4.70; ⅝, $4.65; ¾, $4.65.

Shovels—Discounts are 40 and 5 p.c.

Harvest Tools—50, 10 and 5 p.c.

Axe Handles—Turned, s.g. hickory, $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

Axes—Bench axes, 40 and 5; broad axes, 5½ to 7½, $21.00 per dozen; 7¾ to 8¾, $23.00 per dozen; Royal Oak, per doz., $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.50; Copper King, $8.25; Columbian, $9.50; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.75; Copper King, $10.50 per dozen.

Auger Bits—"Irwin" bits, 47½ per cent., and other lines, 70 and 10 per cent.

Blocks—Steel blocks, 35; wood, 60.

Hinges—Light "T" and strap, 65.

Hooks—Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

Files—Arcade, 75; Black Diamond, 60; Nicholson's, 62½ per cent.

Locks—Peterboro and Gurney 40 p.c.

Stove Pipes—6-in., per 100 feet length, $9.25; 7-in., $10.

Tinware, Etc.—Pressed, retinned, 70; pressed, plain, 75 and 2½; pieced, 25; japanned ware, 35; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; White, 70 and 5; Diamond, 50; Granite, 60 per cent.

Galvanized Ware—Pails, 37½ per cent.; other galvanized lines 33 1-3 per cent.

Solder—Quoted at 22c per lb.

Lanterns—Cold blast, per dozen, $7; coppered, $9; dash, $9.

Churns—45 and 5; list as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

Wringers—Royal Canadian, $36; B.B., $40.75 per dozen.

Lath Yarn—10¾c.

Rope—Sisal, 10½c per pound, and pure manila, 14¾c. British manila, 11¾c.

Building Paper—Anchor, plain, 66c; tarred, 69c; Victoria, plain, 75c; tarred, 88c; No. 1 Cyclone, tarred, 84c; No. 1 Cyclone, plain, 66c; No. 2, Joliette, tarred, 69c; No. 2, Joliette, plain, 51c; No. 2 Sunrise, plain, 56c; Jubilee plain, 75c; Jubilee tarred, 88c; Buffalo plain, 66c; Buffalo tarred, 69c; Lion plain, 55c.

Corrugated Iron and Roofing, Etc.—Corrugated iron, 28 gauge, painted, $3; galvanized, $4.10; 26 gauge, $3.35 and $4.35. Pressed standing seamed roofing, 28 gauge, $3.45 and $4.45. Crimped roofing, 28 gauge, painted, $3.20; galvanized $4.30; 26 gauge, $3.55 and $4.55.

Ammunition, Etc.—Cartridges, rim fire, Canadian, 50 per cent.; American, 33 per cent.; pistol sizes, Canadian, 25 per cent.; American, 5 per cent.; military, Canadian, 20 per cent. off. American, 10 per cent. advance. Primers, $1.55. Loaded shells: English and Canadian makes, 12 gauge black soft, $18; 10 gauge, $22.50; 12 gauge smokeless, chilled, English, $24; Canadian, $23; 10 gauge smokeless, chilled, English, $28; Canadian, $27. Shot: Drop, per 100 lbs., $6.75; chilled, $7.15; buck, $7.55; 28 ball, $7.95. Powder: F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.

Iron and Steel—Bar Iron basis, $2.70. Swedish iron basis, $4.95; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel: Black Diamond, 100 lbs., $9.50; Jessop, $13.

Sheet Zinc—$8.50 for cask lots, and $9 for broken lots.

Pig Lead—Average price is $6.

Lead Pipe—Quoted at $7.25.

Copper—Planished copper, 29½c per pound; plain, 24½c.

Iron Pipe—Black pipe, ¼-in., $2.70; ⅜, $2.85; ½, $3.75; ¾, $4.75; 1, $6.75; 1¼, $9.25; 1½, $11; 2, $14.80; 2½, $24.60; 3, $32.30; 3½, $40.50; 4, $46; 4½, $54. Galvanized: ¼-in., $3.65; ⅜, $3.80; ½, $4.50; ¾, $5.80; 1, $8.40; 1¼, $11.40; 1½, $13.80; 2, $18.40.

Fittings—Wrought couplings, 55 per cent.; nipples, 70 per cent.; classified malleable fittings, 25 per cent.; malleable bushings, 50 per cent.; malleable unions, 55 per cent.

Galvanized Iron—Apollo, 16-gauge, $4.15; 18 and 20, $4.40; 22 and 24, $4.65; 26, $4.65; 28, $4.50; 30-gauge or 10¾-oz., $5.20; Queen's Head, 20, $4.60; 24 and 26, $4.90; 28, $5.15.

Tin Plates—I.C. charcoal, 20x28, box, $10; IX charcoal, 20x28, $12; XXI charcoal, 20x28, 14.

Terne Plates—Quoted at $9.50.

Canada Plates—18x21, 18x24, $3.50; 20x28, $3.80; full polished, $4.30.

Lubricating Oils—600 W. cylinders, 80 cents; Maple Leaf cylinder, $1 per gal.; 700 A. cylinder, 75c; Sterling cylinder, 55c; 600 A. cylinder, 50c; Capital cylinder, 59c and 54c; Solar red engine, 32c; Atlantic red engine 29c; heavy castor, 29c; medium castor 28c; Ruddy harvester 30c; standard gas engine oil 36c; Renown engine oil, 38c.

Petroleum and Gasolene—Silver Star, in bbls., per gal., 20c; Sunlight, in bbls., per gal., 22c; per case, $2.45; Eocene, in bbls., per gal., 24c; per case, $2.60; Pennoline, in bbls., per gallon, 25c; Silver Light, 22c; Starlight, 20c per gal.; Sterling Light, 24c per gallon. Engine gasolene, in barrels, gal., 25½c, f.o.b. Winnipeg, in cases, $2.60.

Bluestone—7c lb.

Paints and Oils—White lead, pure, $6.50 to $7.50, according to brand; bladder putty, in bbls., 2½c; in kegs, 2¾c; turpentine, barrel lots, Winnipeg, 77½c. Linseed oil, raw, Winnipeg, 65c; Calgary, 77c; Lethbridge, 77c; Edmonton, 78c; boiled oil, 3c per gallon advance on these prices.

SAVE FUNERAL EXPENSES.

In a small folder entitled "Aerograms" the poetic genius of the Southern Engineer reels off the following rattling good suggestion to dealers in all kinds of merchandise, who are drifting toward the decadent line in business:

Tell us, are you advertising
In the same old foolish way
That your grand-dad did before you,
And persist, "It doesn't pay"?

Think the whole world knows your address,
"'Cause it hasn't changed in years"?
Wouldn't the pathos of such logic
Drive a billygoat to tears?

"Just a card" is all you care for,
Hidden, lonesone and unread,
Like the sign upon a tombstone
Telling folks that you are dead.

Wake up, man, and take a tonic,
Bunch your hits and make a drive,
Run a page and change your copy,
ADVERTISE and keep alive!

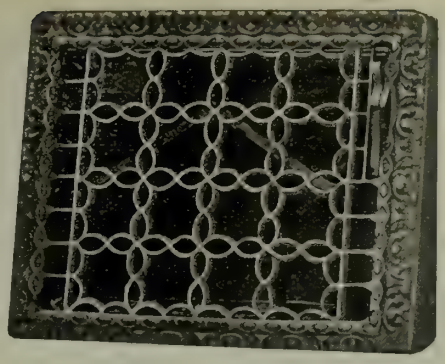
TO CLEAN GUN BARRELS.

To clean a dirty, powder-caked gun barrel, plug one end and pour vinegar into the other.

TO MAKE AN IDEAL PAINT

that will stand the trying weather conditions of Western Canada has been our object.

Stephens'
HOUSE PAINT



is our attainment—it is right because

IT covers wears looks **WELL**

It is always in stock!

You would have no difficulty in proving this, by ordering at once any of the numerous shades. It is a paint that has become a favorite with hundreds of retailers, because it has always pleased their customers.

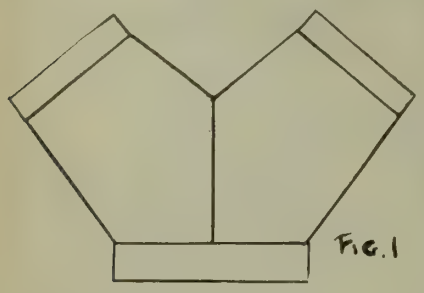
Cutting Patterns in the Tin Shop

Readers of Hardware and Metal Are Requested to Make Use of This Department. Questions Regarding Patterns Will Be Answered by Experts Discussion is Also Invited on Any Matter Pertaining to the Tin Shop.

PATTERN FOR A "Y" BRANCH.

Let Fig. 1 be the branch, Figs. 2, 3, 4, 5, the plan of construction. We will take it for granted that both branches are to be exactly alike and the (3) three openings round, so it will be only necessary to deal with one branch of the pattern as shown in Fig. 2.

Let "1—7" be the diameter of the pipe. On the line "1—7" draw the



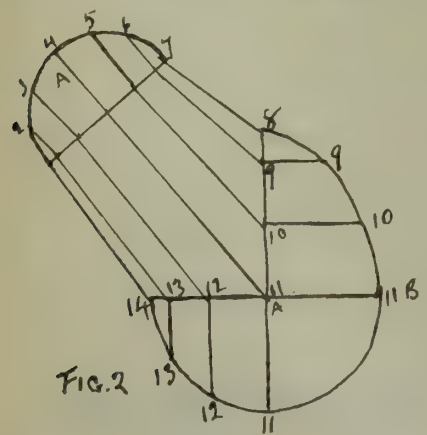


Fig. 1

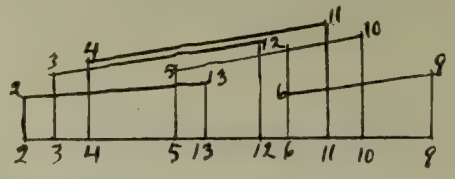
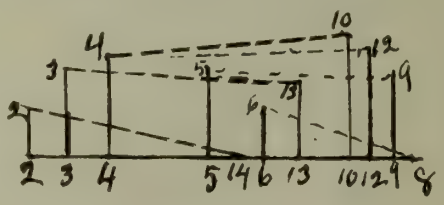


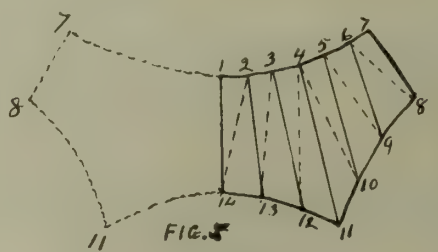
semi-circle "A" and divide it into any number of equal parts and from these points draw lines at right angles to "1—7." Using "11 a" as centre, draw the half circle "11 b—14." From the point "11 b" draw the elliptical curve as shown by "8—11 b" and divide this section into half the number of parts as there are in the semi-circle "A" and from these points draw lines at right angles to "8—11 a" and divide one-half of the semi-circle "11 b—14" into one-half the number of parts as there are in the semi-circle "A" and from these points draw lines at right angles to "11—14."

Now draw heavy lines from "2 to 13," "3 to 12," "4 to 11," etc., and draw dotted lines to the opposite corners as "2 to 14," "3 to 13," "4 to 12," etc., always connecting the dotted lines the



shortest way. These heavy and dotted lines form the basis of sections to be constructed.

To get the true length of the heavy line "2—13" take this distance and place it as shown by "2--13," Fig. 3. From "2" and "13" erect the perpendicular lines "2—2" and "13—13" equal to "2 2" and "13 13" Fig. 2. Draw a line from "2" to "13" in Fig. 3, which is the true length on the finished article "Fig. 2." In this way all the true lengths of the heavy lines are obtained



in Fig. 3 and that of the dotted lines in Fig. 4.

Take the distance of "1—14," Fig. 2, which shows its true length, and place it as shown by 1—14" in Fig. 5. Now with "1—2" in Fig. 2 as radius and "1" in Fig. 5 as centre, describe the arc "2" and intersect it by an arc struck by "14" as centre and the dotted lines "14—2" in Fig. 4 as radius. Now with "14—13" Fig. 2 as radius and "14" in Fig. 5 as centre, describe the

arc "13" and intersect this arc by an arc struck from "2" as centre and with "2—13" Fig. 3 as radius.

Proceed in this manner, using alternately first the divisions in the semi-circle "A" in Fig. 2, then the slant lines in Fig. 4, the divisions in the semi-circle "11—14" Fig. 2, then the slant lines in Fig. 3 until the line "4—11" in Fig. 5 has been obtained. Then starting from the point "11" in Fig. 5 use alternately first the divisions in the

elliptical section Fig. 2, then the slant lines in Fig. 4, then the division in the semi-circle "A" in Fig. 2, then the slant lines in Fig. 3, until "7—8" in Fig. 5 is obtained, which is equal to "7—8" in Fig. 2.

Now trace a line through points thus obtained, shown from "1" to "7" to "8," to "11," and to "14." Trace this opposite "1—14" as shown by "7," "8," and "11," thus forming the full pattern for one branch of the Y edges must be allowed.

W. M. M.

LARGE RADIATING SURFACE.

When you burn a pound of coal, you generate a certain, definite, fixed amount of heat, no more and no less. No matter in what kind of a stove the combustion takes place, the quantity of heat evolved is the same.

The main question is, what does the stove do with the heat thus generated? How much of the heat is radiated into the room, and how much escapes out the chimney?

An open fireplace wastes heat, and a direct draft stove wastes heat as compared with a base burner.

But which of two base heaters, radiates the more heat? The one with the larger direct radiating surface. There is nothing mysterious about it; no amount of magic or argument can interfere with the established scientific fact that of two heaters of equal firepot measurements, equally well fitted, the stronger heater is the one with the larger direct radiating surface.

TALK FURNACES TO FARMERS.

The Hardware Trade has in recent issues been discussing the tendency of hardware merchants in the country districts in the western states to force stoves on the farmer customers instead of selling them modern furnaces.

The idea generally prevails among the merchants that the farmers won't buy anything but stoves for heating purposes, which, as a matter of fact, is wrong. Farmers in this country are independent in every sense. They own their farms, have substantial buildings, and in the majority of cases a bank account.

If this is true the hardwareman is making a mistake when he sells a stove to a customer at a modest profit of, say $5, when he might sell a modern heating plant and clear several times that amount on the deal.

Years ago the farmers lived in small shanties, but nowadays his residence has improved and is so much larger in size that to keep it comfortable the installation of a modern heating plant is absolutely necessary. This being the case, why not change your methods of dealing with the farmer? Don't wait until he is ready to buy a stove or the chances are you won't be able to supply him with a furnace, but solicit his interest in your own heating system, point out the convenience of attending to a furnace instead of several stoves and the saving in fuel that the careful manipulation of the modern system

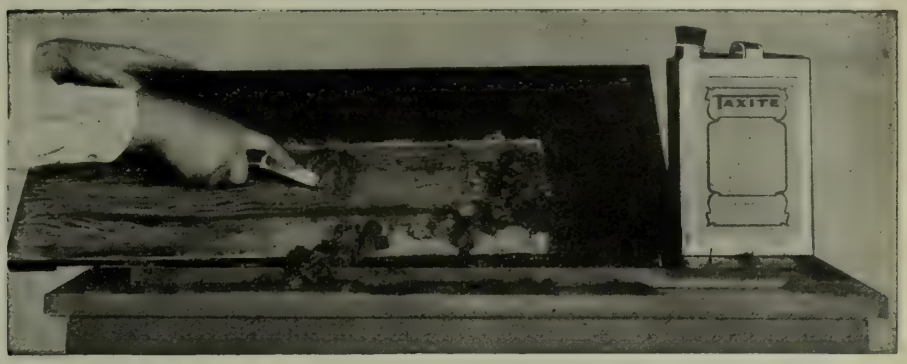
shows. A strong argument in favor of the furnace rests in the fact that farmers in different sections of the country have installed a modern plant and their neighbors are generally envious of the result.

The farmer may need a little educating about the matter of buying better goods, but if given a chance he generally learns to see the value in modern improvements which a few years ago were scorned. A good time to broach the subject to a farmer is when he is building a new house. Go and have a talk with him, tell him the advantages of the furnace and dwell on the better sanitary conditions which result from its use. He will understand that the advantages enjoyed by his city friends may easily be his own and if the dealer himself knows the advantages of the furnace the result will be a sale and a satisfied customer. The reward for doing advance work may not seem worth while, but remember that if you instal a system for Farmer Jones and he is satisfied with it, Farmer Brown and the other farmers will become so interested that you will find that you have contracts for installing modern heating plants which will ensure your customers satisfactory results and will help to make this year's business show an increase over any other year in your firm's history, and this is the point to consider when you are talking furnace to probable purchasers.

PUSHING THE CLEARANCE SALES.

There are only a few weeks more in which the hardware dealer can hope to sell stoves this season. Are you doing all that you can to clean up the stove stock? Have you been pushing the clearance sales of stoves and other winter lines to the limit? asks the Hardware Trade.

Ofttimes the sale of a new stove can be made more easily by agreeing to take an old stove for a small sum as part payment. In making clearance sales and cutting the life out of profits, the dealer does not feel that he can take anything on the deal that isn't as good as cash.



Neither can he afford to make as liberal an offer for an old stove now as he could earlier in the season when he was getting full prices for the new and when there was greater opportunity of disposing of the old. But still, if possible, take the old stove to make a sale. You will probably have to carry it over if you get anything better than scrap iron price for it; but it is better to carry over a $5 old stove than it is to carry over a $25 new one, provided, of course, that the old one can be fixed up in the fall and sold for the $5, or better.

A STOVE WINDOW.

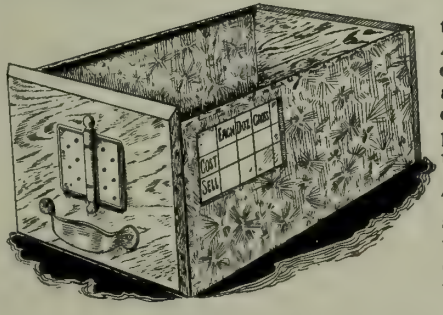
A window display showing a model kitchen would be an attractive advertisement at this time of year if the details of the arrangement could be carefully carried out. To carry out the idea cover the floor of your show window with oilcloth and place a small cook stove in the centre at the rear of the window. To make the display realistic run a pipe over to the wall

TAXITE
REGISTERED

SHERWIN-WILLIAMS RELIABLE PAINT AND VARNISH REMOVER

Order Taxite Now---It's a Good Seller all the Year 'Round

Sherwin-Williams Taxite is the simplest and most efficient Paint and Varnish Remover on the market.



It's a good seller all the year 'round, but you can create a special demand for it during the Spring house-cleaning season by suggesting its use on old, worn and marred furniture, woodwork or little things about the house. Every can of Taxite sold will sell other specialties, for refinishing, as well.

The cut shown above illustrates the simple method of using Taxite. Following the directions printed on each package the customer cannot fail to obtain the most satisfactory results. Address nearest office.

THE SHERWIN-WILLIAMS CO.
LARGEST PAINT AND VARNISH MAKERS IN THE WORLD
Canadian Headquarters and Plant: 639 Centre St., Montreal, Que.
Warehouses: 86 York St., Toronto, and Winnipeg, Man.

Some Goods Sell Themselves

that is if they are properly displayed. Articles like wrenches, floor spring hinges, expansion bolts, squares, rules, automatic awls and screw-drivers, etc., should be accessible to customers; not hidden away in packages. Keep them in view if you want to sell them.

The best salesman is the man who creates a demand for goods, convinces customers they want articles they had not thought of buying. Display your goods well and they will act as silent salesmen for you.

They will suggest articles customers had not thought of buying.

The Bennett Steel Shelf Box

is the strongest and most serviceable box made. It has steel sides and wood front and back. There are no nails on the outside, the steel is locked into the wood by our own patented process.

Write for Price List and Full Description.

SOLE MANUFACTURERS:

Cameron & Campbell, - Toronto, Ontario

and fasten with a wire to the ceiling. In the corners at the rear and each side of the stove place a row of pans and kitchen utensils, a chair can also be placed in the corner for effect and a number of additional pans may be displayed to advantage on the stove. In front of the window, but as far to the side as possible, arrange a small sized kitchen cabinet and opposite to this hang a baking board, rolling pin, etc. The effect, though simple, is quite attractive and should pay for the trouble of arrangement in a short time.

Coal Burning in Warm Air Furnaces and Ranges

By "Harrington," in the Metal Worker

Improved combustion, if obtained, will exhibit a corresponding decrease in the volume of smoke, an increased volume of heat from the coal consumed, and a consequent decrease in coal consumption. Having selected a good quality of coal of proper size, the rules to be followed are :

Do not pack the coals tightly.

Keep the fire loose and spongy.

Keep the fire clear of ashes and clinkers.

Admit plenty of air at the bottom of the fire, and the results will present a condition highly satisfactory, always bearing in mind, however, that when perfect action of the coal burning, heating or cooking apparatus is desired perfect combustion is required, and to obtain perfect combustion all the air that passes up the chimney must first pass through the fire, but neither perfect combustion nor the satisfactory operation of the furnace or range can be obtained unless the chimney be of sufficient capacity or proper height, and is perfectly free from any opening or crevice other than the opening into which is inserted the smoke pipe of furnace or range.

The Question of Grates.

Care should be exercised when selecting a furnace or range, to obtain that which is equipped with either a triplex or a duplex grate, by the use of which the fire may be kept loose, spongy and clear of ashes and clinkers, without packing the fire, which is apt to be the case where the old style shaking grate is used. If the furnace or range is of the modern type, and care has been exercised in the management of the apparatus and satisfactory results not obtained, do not hastily condemn the furnace or range, for neither furnace nor range has a draft of its own; this must be supplied by the chimney, which may be likened to a pump, its mission being to draw the air through the furnace or range and thus create a draft.

A manufacturer will not place upon the market a furnace or range until it is an assured fact that the furnace will heat and the range will cook, bake and heat water; if therefore the furnace or range installed does not perform its expected duty local conditions are the preventive, and the defect may be remedied by an experienced furnaceman.

Care of a Furnace.

The first thing in the morning and again the last thing at night close the check damper in the smoke pipe at the back of the furnace, turn the dust damper to open that flue, and, if a triplex grate, apply the shaker crank in turn to each one of the shaker bars, and keep turning these until the fire is entirely clear of ashes and clinkers, then close the dust damper and fill the firepot with coal level with the top of the first pot, close the feed door and open the flap in the ash door, or in the absence of a flap on this door, open the door itself, leaving full draft on until the body of coals becomes well ignited; then close the draft at the bottom and open the check draft damper in the pipe at the back of the furnace, and the fire thus arranged will steadily burn for hours, maintaining an even temperature.

If the furnace be equipped with a duplex grate proceed in the manner mentioned, except as to the operation of the grate itself. To the shaker bar of this grate apply the shaker crank and give it one or more quick continuous turns down and back, do not agitate the grate, but give a quick movement down and back, usually one or two turns down and back will clean the fire of all ashes and clinkers. Do not at any time leave the feed door open; check the draft by closing the ash door and flap in that door, and by opening the check draft damper in the smoke pipe at the back of the furnace.

Care of a Range.

To Clean the Fire: If a duplex grate close the oven damper in order to create a strong draft to the dust flue, open the dust damper, place the shaker crank on the shaker bar of grate and give it one or two quick, continuous turns down and back, do not agitate the grate, but give a quick movement down and back, usually one turn down and back will clean the fire of all ashes and clinkers, then close the dust damper. If a triplex grate, arrange the dampers as mentioned, and place the shaker crank on the shaker bar and continue turning it until the fire is clear of ashes and clinkers. In putting coal in the firebox never place in it more than enough to fill the firebox even with the top of the firebrick or firebox linings.

To Prepare for Baking : Clean the fire in the manner described, then fill the firebox with coal and allow all the draft possible until the entire body of coal is ignited, then close the oven damper, allowing plenty of air to reach the bottom of the fire by opening the slide in the ash pit door or by opening the ash pit door itself. and in accordance with the strength of the draft of the chimney, the oven should be ready for baking in from 10 to 20 minutes after closing the oven damper.

To Check the Fire : Close the ash pit door and slide, open the register in the smoke pipe, and, if necessary, open the slide in feed or broiler door.

Smoke Pipe and Chimneys.

The smoke pipe connecting the furnace or range to the flue should not be reduced in size. Each joint of pipe should fit well and close at the joints, and care should be exercised to avoid telescoping the joints at elbow. The smoke pipe should not enter the flue farther than the edge of the inside wall of the flue, and where the smoke pipe enters the flue care should be taken to make this point air-tight by well cementing around the pipe.

It is the chimney that supplies the draft. A chimney should not be less than 8x8 in. square, or its equivalent. A chimney, unless it is of sufficient capacity and scientifically arranged for such work, will not create sufficient draft for both furnace and range. A chimney should not extend more than 3 or 4 in. below the point of entrance of the smoke pipe. The higher the chimney the better the draft. A chimney should be higher than the peak of the roof. A chimney near tall trees having heavy foliage will not at all times have a good draft. A chimney surrounded by tall buildings will not show good results. A chimney will show better results when the atmosphere is dry and clear than when the air is heavy and foggy.

The size of coal best adapted to furnaces and ranges :

Furnaces, with fire pots less than 14 in. in diameter, nut coal.

Furnaces, with fire pots 14 to 28 in. in diameter, stove coal.

Furnaces, with fire pots larger than 28 in. in diameter, egg coal.

Ranges, with ovens from 14 to 20 in., nut coal.

LE SAUVAGE SPECIAL CHIMNEY CONNECTION.

John Le Sauvage, New York city, has taken out patents for a special chimney connection calculated to obviate the disadvantages met with so often in cities where ranges with an oval collar on top for the smoke pipe, and a close stove pipe connection with the chimney, make the periodical cleaning of the chimney almost impossible without much labor and damage to brickwork. The Le Sauvage chimney connection is made of sheet iron and consists of an oval collar extending through the brickwork into the flue and through the oval opening. The round horizontal pipe from the range can be readily connected. In the front part of the flat piece to which the oval collar is attached there is a slide which can be raised and lowered. When it is raised it allows the oval pipe, on the range collar with the horizontal round connections to the chimney, to be raised so that it can be disconnected from the pipe collar and withdrawn, when free access to the chimney for cleaning or removing any obstruction, is possible. When one of these adjustable flue connections has been built into the chimney flue at the proper height, the connection or disconnection of a range is a simple matter, asserts the patentee. It is only necessary to raise the slide, push the horizontal chimney connection in through the oval opening, then lower the oval vertical piece until it connects with the collar and is pushed down into place, he points out. Then by pushing the slide down a tight joint around the round pipe connection is effected and an acceptable finish is made.

THE WANT AD.

The want ad. has grown from a little used force in business life, into one of the great necessities of the present day.

Business men nowadays turn to the "want ad." as a matter of course for a hundred small services.

The want ad. gets work for workers and workers for work.

It gets clerks for employers and finds employers for clerks. It brings together buyer and seller, and enables them to do business, though they may be thousands of miles apart.

The "want ad." is the great force in the small affairs and incidents of daily life.

Announcement

M. R. M. CO.

New Cold Process Horse Nails

As the jobbers and wholesalers are selling Horse Nails at a price per box, and we have been requested to adopt the same course, we take this opportunity of announcing to the trade that in future we will sell our Horse Nails at a base price per 25-lb. box. Base sizes: 10, 11 and 12.

EXTRAS FOR OTHER SIZES:

No.	9	8	7	6	5	4	3
$	.10	.20	.40	.65	.90	1.15	1.65 per box.

If you have not had samples of our NEW COLD PROCESS HORSE NAILS, write us for them at once.

The Montreal Rolling Mills Co.

BUILDING AND INDUSTRIAL NEWS

For additional items see the correspondence pages. Information is solicited regarding building and industrial news, the incorporation of companies, establishment or enlargement of mills, factories or foundries, municipal water works and sewerage systems, railway or mining news, etc.

Industrial Development.

The Shoddy Mills, Stratford, owned by Benjamin Leckie, were damaged by fire last week to the extent of $5,000.

Contracts for a large amount of steel rails for the Egyptian Government and New South Wales Government, have been let to British mills. Heretofore all rails and rolling stock for these roads has been supplied by American firms.

Last week's storm did great damage to the towns on the coast of the Maritime Provinces. Vessels were carried off, wharves and bridges destroyed, and costly breakwater sites demolished. The loss is estimated in the millions.

The New Brunswick Iron Company have leased their large property at Lepreaux to the Dominion Steel & Iron Co. for a period of eighty years. The lessees will pay a royalty of 25 cents a ton on all ore lifted from the mines.

A. Hill & Co., bridge builders, have received the contract for another large steel bridge at Wingham. The contract price will be nearly $7,000. The firm is very busy at present on getting the material out for a large bridge near Bayfield.

Rhodes, Curry & Co., Amherst, N.S., have decided to establish a large steel foundry at Moncton, for the manufacture of steel castings and general railway appliances. The company will probably occupy the old I.C.R. shops at that place.

Reports of coal discoveries are on the increase in the west. From Regina come reports of a number of seams being unearthed by farmers varying in width from two to eight feet. Many of the seams are being worked to meet local requirements and companies are organizing to take over the more important claims.

The first shipment of coal from the Diamond Vale coal and iron mines, of Coutlee, B.C., has been received at the Pacific coast. This company spent $100,000 in 1907 for buildings and equipment, and a western essayer is authority for the statement that the undertaking will prove successful. The coal is bituminous and high class.

Since Australian custom duties have been practically settled, trade has revived considerably in the different states and as a consequence a large number of orders for immediate shipment are reaching Canadian manufacturers. The heaviest orders are for tubing and pipe, though some fair orders for general hardware are being received.

The Stratford Manufacturing Company's new factory is nearly completed. The building is a compact, two-storey brick structure and is equipped with hardwood floors, which are strongly reinforced to carry the heavy machinery to be installed. The new company will manufacture ladders, swings, hay sling carriers and many important lines.

The St. Lawrence Lumber Company, recently incorporated, has acquired a tract of land in Quebec containing in the neighborhood of 500 square miles of timber limits. The headquarters of the company is at Sherbrooke, and gangs of bushmen are being fitted out at that place to make a survey of the property and to establish a number of camps.

January outputs from the collieries of the Dominion Coal Company surpassed all winter monthly records in the history of that organization, totalling 312,358 tons. Such an output would be considered a good average for a summer month. In January, 1907, the output was 252,248 tons, and in 1905, 160,061 tons. Open weather permitted shipments to be much larger than usual.

The duty on bicycles going into Australia has been revised. On Aug. 5 an order-in-council went into force fixing the duty on frames at five guineas, with a United Kingdom preference rebate of 10 per cent. Though the above was in force from August 8 to December 31, 1907, it was not ratified, and the new tariff will remain on the previous basis, 30 per cent. general, and 25 per cent. preferential, on goods manufactured within the bounds of the United Kingdom.

In the course of the next few days it is anticipated shipments of ore from the Government mines on the Gillies limit will be made. The Kerr Lake branch of the Temiskaming and Northern Ontario Railway will be completed in a week or ten days, and the ore from the Government mine will be immediately shipped. The Government desires that all ore shipped should be smelted in the province, and arrangements are being made with the Deloro smelter at Marmora, which is nearing completion, to take the ore.

It is reported that Granby Consolidated, of Boston, will likely take over the Dominion Copper Company and the British Columbia Copper Company. Engineers in the employ of the former company have gone over these mines, and it is confidently expected in the west that the change of ownership will take place in the near future. The combination would mean that the red metal could be produced at a figure that would leave a fair margin of profit with copper at a price that would close 75 per cent. of the copper mines of the American west. It would mean that the Wall Street "copper corner" manipulators have either been beaten at their own game, or have arranged for a new deal.

Railroad Construction.

The links in the G.T.P. chain of railroads are being pushed to completion by the company's officials. The division between Thunder Bay and Fort William, a distance of 400 miles, is expected to be completed by May 15. The work on the various sections now let is being pushed as rapidly as possible and it is confidently expected that the road in that section will be completed in record time.

The Grand Trunk Pacific is reported to have settled the differences with the British Columbia government regarding the title to lands at and adjacent to the terminus at Prince Rupert. In consideration the railway company has decided to hurry the construction of the road. The contract for the construction of a hundred miles from Prince Rupert eastward is to be awarded within three months. Mr. Wainwright, vice-president of the G.T.P., has been at Victoria several weeks negotiating.

The White-Parr railway is arranging to make an early start in the spring of the construction of the line from Copper Camp to White Horse. 500 men will be employed April 15. This action is being taken in view of the expectation in New York that copper will rise several cents per pound this spring, and the price will make profitable mining in the rich properties of the White Horse camp. Ore bunkers will be erected at Skagway. Six hundred tons of steel rails have been purchased for the enterprise.

Building Notes.

Winnipeg Congregationalists will erect a new church at Winnipeg during the year.

J. Leckie & Co., Vancouver, have taken a permit for a solid brick warehouse, to cost $80,000.

A permit for the government observatory was issued by the city architect, Toronto, on Feb. 6. The building will be of three storeys and will cost $91,000.

The contract for the new government public buildings to be erected at Delhi have been let, the successful tenderers being Shultz Bros., Brantford. The contract price is in the neighborhood of $30,000.

Contracts will be called for in March for Winnipeg's new theatre, the "Imperial," which will be built this year. The cost of the new theatre will be $150,000 and there will be seating capacity for 1,500.

Building permits for January totalled $351,685 in Vancouver, as against a total of $187,265 for the same month last year. These figures are 20 per cent. in excess of any other month's showing in the history of the city.

Companies Incorporated.

The Standard Foundry and Manufacturing Company, with headquarters at Quebec, has been incorporated with a capital stock of $95,000 to take over the interests of the Standard Foundry Company, Quebec, and to deal in and manufacture any articles constructed of metals. The provisional directors of the company are Michael Ameye, Marcel Baartmans, Victor Martineau, Arthur Jodain, and J. B. Bissonnette, all of Quebec.

THE COMPANY'S CLAIM.

The Dominion Steel Company have issued a statement showing the amounts they claim from the Dominion Coal Company.

Paid for extra cost of coal purchased from the Dominion Coal Company, $1,237,235.39.

Paid for extra cost of coal purchased from others, $402,721.43.

Damages due to short deliveries in August, September and October, 1906, $132,252.75.

Damages due to cessation of deliveries in November, 1906, estimated at $479,000.

Total, exclusive of interest, $2,251,209.57.

A Paint Catechism

By G. B. Heckel.

84. How is a fit condition of surface obtained? First, by delaying the application of the priming coat until the wood is thoroughly seasoned, unless seasoning has been properly attended to in the lumber; secondly, by seeing that the plaster on the inside of the building is completely dry before painting is begun on the outside. A new house should have been heated some weeks before it is painted. In an old house leaking spouts, etc., should be repaired and the adjacent wood allowed to dry thoroughly before re-painting. Thirdly, by avoiding the application of paint in moist weather or when the atmospheric moisture is high. Fourthly, by selecting a dry, mild season, as late spring or early fall, rather than a cold or hot season, as winter, or mid-summer, for the work. Fifthly, by seeing that sappy or resinous spots in new lumber are properly treated before painting. Sixthly, by due care on old work that all loose paint and dust are removed by scraping, sand-papering, wire brushing, dusting, or if necessary, burning, before new paint is applied.

As a rule, it should always be remembered that two thin coats thoroughly brushed out, are better in most cases than one thick coat, and that repainting should never be delayed until the undercoats begin to loosen seriously.

85. Can the ordinary property owner obtain satisfactory results with prepared paint by applying it himself? Only when conditions are favorable. In any case he should study carefully the directions on the can, and unless they are found to apply to his particular job, should consult either the manufacturer or a practical painter for fuller advice.

86. Will a chemical analysis determine the quality of a paint? No. To the expert paint chemist it will indicate whether the paint is scientifically compounded or not; but of the method of preparation, which is quite as important as composition, it wil tell nothing. Only a thorough and exhaustive physical examination wil tell this.

87. Will the blow-pipe determine whether white lead is good or bad? No. It will tell whether or not the material is a pure lead compound, but it will reveal nothing regarding its qualities as paint. The soluble salts of lead such as the acetate or the nitrate, will yield metallic lead with the blow pipe more readily than will the carbonate, but when found in white lead they are very detrimental. On the other hand, the more stable white compounds of lead, such as the oxy-sulphate, though they may be pure lead compounds, will not reduce before the blow pipe without the use of a flux, except in the hands of a skilled operator.

88. In view of all the foregoing what is the true test of paint value? Service. The conditions, physical, chemical and technical governing the behavior of paint in any given case are so numerous and so obscure that it is hopeless for any one but an expert to attempt to comprehend them. House paint is designed to cover a wide range of conditions and the better grades of prepared paints meet the average conditions with remarkable success. As between the many competing products, naturally, it is to the record of success rather than the composition of the paints that the consumer must look for enlightenment. There is always a reason—usually there are many reasons why a certain paint under certain conditions meets or fails to meet the requirements; but these reasons are usually obscure and technical and quite beyond the range of common knowledge. It may be taken as axiomatic that no paint obtains permanent popularity except on the basis of substantial merit. Success begets success and nothing could be more conducive to increased sale of a given paint in any locality than the

A Quick Starter and Strong Finisher

ocular demonstration of its value on painted buildings. It is this practical demonstration of superior convenience, economy and durability which has caused the consumption of prepared paint to expand from the humble beginnings of the industry in the late fifties, to its vast proportions of the present day.

(To be Continued.)

Paint and Oil Markets

TORONTO.

Toronto, Feb. 11.—Trade has not yet recovered from the effects of the extreme weather conditions of the past week. Business is dead and though jobbers in local circles are not complaining, no orders are coming in, and the prevailing prices are being firmly maintained. Though the railroads are again in operation, country roads are in an unpassable condition, owing to the large amount of snow, and, as a result, the retail trade throughout the country is suffering severely from the effects of the weather.

Turpentine—No change has occurred in the price of this commodity since last writing, and prices are steadier in the South. Shipments booked for Toronto for last week's delivery are still on the road, but as the trade has made little inroad on present stocks, no inconvenience has resulted from this source. Buying is still cautious, dealers only carrying enough stock for immediate needs. We still quote single barrels 75c; 2 to 4 barrels 74c. Less than barrels add 5c per gallon.

Linseed Oil—This commodity remains firm and is not much in demand at present. No further change has taken place on the foreign markets, and the expected advance has not yet overtaken the local markets. A sudden demand of average size would exhaust the supply on sale, and as shipments which should have reached this city last week are still on the road, the stock on hand is very low. We still quote: Single barrels, 60c; 2 to 3 barrels, 59c; 4 to 9 barrels, 58c. Add 3c to this for boiled oil, f.o.b. Toronto, Hamilton, London, Guelph and Montreal. Terms, net, 30 days.

White Lead—There is a small average demand for white lead which cannot be said of any other article on the paint market. Prices are being firmly maintained and stocks are low. The market is still in an unsettled state, but Toronto prices are firm. We still quote: Genuine white lead, $6.25; No. 1, $6.

Red Lead—Prices remain firm and the demand is slack at present. The prevailing belief in local circles is that a change will take place in the price lists in the near future. For some time bottom prices have been quoted and the expected revision will likely show an advance. We still quote: Genuine, in 100-lb. kegs, $6; genuine, in 560,-lb. casks, at $5.50; No. 1, $5.

Petroleum—An average demand exists at present through the country and no changes have occurred during the week. Quotations remain: Pratt's Astral, 17½; water white, 15c, and prime white, 13½c.

Glass and Putty—There is no demand at present, owing to the general condition of the roads. Spring booking will likely go ahead in the near future. Prices of putty remain: Bladders, $1.95 per 100 lbs.; less than barrels, $2.10 per 100 lbs.

Shellac—Prices are steady, with no demand at present. Prices remain: Pure white, in 5 gallon lots, $2.25; pure orange, $2, and No. 1 orange, $1.90.

Varnish—The demand is slow at present, but prices remain firm. Quotations are as follows: No. 1 furniture, in barrels, 65c; elastic oak, in barrels, $1.25; light hard oak, in barrels, $1.05.

MONTREAL.

Montreal, Feb. 14.—The heavy weather has continued to interfere with the traveling arrangements of the various concerns, and orders are coming in but sparingly. Much was anticipated from February in the way of an improved demand all round, but the present adverse weather circumstances have militated against that. Still, with the railroads once again in working order there is plenty of time for February to fulfil anticipations. Prices are unchanged.

Linseed Oil—Shipments continue dull, and there is nothing of note to record. The foreign market is firm, and quotations are unchanged at: Raw, 1 to 4 barrels, 57c; 5 to 9 barrels, 56c; boiled, 1 to 4 barrels, 60c; 5 to 9, 59c.

Turpentine—Buyers are still only purchasing for immediate use. The continuance of the snow blockade has, however, caused quite a shortage of turpentine, and prices are holding very firm. With an improvement in the weather, conditions should improve with regard to the arrival of shipments. We quote: Single barrels, 75c; wood distilled turpentine, pure, 69c.

Ground White Lead—The improvement in the demand noted last week has been maintained, and a steady trade has been done this week. It seems as if ground white lead had touched bottom for a time, and with the improved buying a strengthening tone should be imparted to quotations. Prices are unchanged at Government standard $6.25; No. 1, $6.

Red Lead—Red lead still remains quiet It is a gratifying fact that despite the light buying quotations continue firm at Genuine red lead, in casks, $5,75; in 100-lb. kegs, $6; in less quantities at $6.75 per 100 lbs. No. 1 red lead, casks, $5.50; kegs, $5.75, and smaller quantities, $6.50.

Dry White Zinc—The demand continues light, but supplies being easy, prices are

FIRE NOTICE!

We beg to notify our numerous customers and friends that the fire which destroyed our McGill Street warehouse on the 30th ultimo will not affect our business.

Our Factory and Paint Warehouse in Point St. Charles will fill all orders as usual, and we have secured temporary offices at 200 McGill Street, where your wants will receive prompt attention.

Thanking you for past favors and soliciting a continuance of your esteemed patronage.

P. D. DODS & COMPANY

MANUFACTURERS OF "ISLAND CITY" PAINTS

Montreal

maintained as follows: V.M. Red Seal, 7½c; Red Seal, 7c; French V.M., 6c; Lehigh, 5c.

White Zinc Ground in Oil—The demand is very quiet, and prices are firm at: Pure, 8½c; No. 1, 7c; No. 2, 5½c.

Varnishes—Factories are still maintaining their conservative attitude and buying carefully, but the demand is expected to open out very shortly. In anticipation of this, makers of varnish are carrying full stocks.

Putty—Although the demand is improving, there is little strength to it at present. We continue to quote: Pure linseed oil putty, bulk, in 800-lb. casks, $1.75; in 25-lb. iron drums, $2.05; in 25-lb. tins (3 in a case). $2.15; bladder putty in barrels, $1.95.

PAINTS FOR METAL WORK.

Paints or varnishes intended chiefly for decorative purposes, that will last for 15 years on the inside woodwork of a residence, will do well if they last more than five years on the outside woodwork of the same residence, and would be an exception, indeed, if they would last over two years on the tin roof or gutters, thus demonstrating the great difference in exposure and consequent variation in the decomposition of the paint on different portions of a house. It remains for us, therefore, to compound paints for specific purposes, made of such materials that will give them the greatest efficiency.

In a majority of instances paint dealers throughout the country sell most of the paint intended for wood surfaces from $1.25 to $1.50 per gallon. Yet, when it comes to paint for metal roofs the prevailing condition seems to be that the dealer cannot sell a paint for this class of work for more than 50 to 75 cents per gallon. Why? Because the uninformed possessors of false economical paint principles believe "if the paint on the visible exterior of the house, which is expected to look pleasing to the eye, cost a certain price, paint that is put up on the roof, and which is not necessary to look pleasing to the eye, should not cost half that price." Therefore the price that controls the quality of paint on the market for metal roofs which are sold by the dealer is unfortunately, kept down by popular demand.

Another reason for a vast amount of cheap trash on the market for metal protection and called paint is the fact that the painter or tinner applies a cheap quality so that his own temporary profits may be thus gained. Painters and tinners invariably are asked by their customers for prices "per square" for doing the job, (details of quality and materials omitted), and in order to secure the work they are tempted to make a price consistent with their chances of a successful issue. As a rule the tinner does not care much whether the paint he puts on wears one or five years. It makes no material difference to him. It may present a good appearance for a few months after it is applied, and be almost entirely washed off in a year or so afterward.

There are many paints that will wear well for a period of from 5 to 10 years on sheet metal exposed to the weather, and also on bridges, but the manufacturers of these are compelled very often to give a very close bid in order to get a contract and are compelled to use cheap material; in fact, they have often made the statement to those who attempt to sell them high grade paint that "our customers will not pay us any more for our material with high grade paint than if it was coated with the cheapest that could be obtained."

ANNUAL MEETING AT MONTREAL.

The annual meeting of the Canada Paint Company was held in the board room at the head office and works, William street, Montreal. A large number of directors and shareholders were present, a strong contingent coming down from Toronto. A most satisfactory report for the past year was presented, and the management was warmly congratulated. It was mentioned that notwithstanding the general slump in trade, business had warranted the company in running their several factories full time all the winter. The usual dividends for the past year were declared.

SHELLAC AND VARNISH.

A fair estimate of the covering powers of shellac and varnish is as follows: One gallon of shellac varnish will cover 400 square feet of white pine, first coat; it will cover 500 square feet on second and succeeding coats. Interior varnish will cover from 350 to 400 square feet to the gallon, first coat; and nearly 600 square feet for succeeding coats. On hard wood, filled with paste filler, interior varnish will cover from 50 to 75 square feet more of surface than on the unfilled wood.

SECURED NEW PREMISES.

Both Messrs. P. D. Dods & Co. and E. F. Walter & Co., whose premises on McGill St., Montreal, were destroyed by fire as announced a fortnight ago, have made prompt arrangements for carrying on their business as usual.

P. D. Dods' factory and paint warehouse in Point St. Charles was not destroyed so that they are able to carry on business without any interruption and have secured temporary offices at 200 McGill St.

E. F. Walter & Co., have also secured premises at 318 St. James St. and as a new stock of goods was ordered some weeks ago and was on its way from the Old Country at the time of the fire, they, too, will be able to carry on business without interruption and to fill customers' requirements from an entirely new stock.

In salesmanship a smile is a little thing, yet it has brought more customers than have the price or merit in merchandise.

There are never too many competitors in a business. If a salesman does not get trade, it is not because it is overdone, but because the salesman is outdone.

The best you can do for a customer must be determined by an estimate of the best you can do for your employer. The employer first, the customer next, but justice to both.

WALL BROS., BLEURY ST., MONTREAL, PROBABLY THE LARGEST RETAILERS OF PAINTING MATERIAL IN THE CITY OF MONTREAL, SAY: "OUR CUSTOMERS SEEM TO BE DRAWN TO OUR STORE TO PURCHASE THE CANADA PAINT COMPANY'S COLORS AND VARNISHES BY AN IRRESISTIBLE MAGNETISM."

ALABASTINE

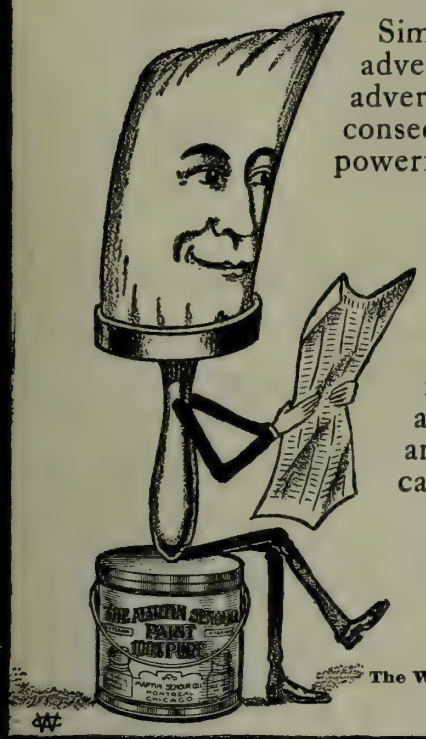
is the only Wall Coating which is extensively and persistently advertised to the general public and is what the people call for when they want anything in the line.

No persuasive argument is required from the dealer to sell it. People know its merits and ask for it because it is *ALABASTINE THEY WANT.*

A well-selected stock of *ALABASTINE* is "as good as the wheat," for repeat sales are invariably the rule once the customer uses it.

Our publicity campaign for 1908 is sure to more than double the already large trade for *ALABASTINE.*

Our illustrated Catalogue, *"HOMES, HEALTHFUL AND BEAUTIFUL,"* handsome Counter Show Cards, Cloth Banners, Tint Cards and other literature, which we supply liberally with every shipment of *ALABASTINE* help the dealer to create new trade.



The new two-sheet Poster showing an enlargement of the illustration of the Dining Room in *"HOMES, HEALTHFUL AND BEAUTIFUL,"* which we propose posting in large numbers on all the Bill Boards in Canada during the Housecleaning Season will be a *"SURE WINNER."*

To any dealer who will promise to display and distribute this advertising matter, we will be pleased to send a complete outfit, free of charge, express prepaid, on receipt of request for same.

Get ready to supply the large and growing demand of *ALABASTINE* by ordering a full assortment either direct or through your nearest Jobber and *DO IT NOW.*

The Alabastine Co., Limited, - Paris, Ont.

PAINT PUBLICITY

Simply stocking up isn't going to sell goods. They must be well advertised. **Martin-Senour Paint** is a good seller because it is well advertised, and dealers who handle it become well advertised in consequence. Back of every dealer in **Martin-Senour Paint** is the powerful advertising machinery of the manufacturers who carry on

An Active Campaign

and help you to push sales. That's one reason why **Martin-Senour Paint** is such an attractive proposition for dealers. Its makers give it the right kind of paint publicity. Then there are other reasons. Write for our special proposition to agents and we will gladly explain our methods and show you how you can make money handling **Martin-Senour Paint.**

Mistakes and Neglected Opportunities

MATERIALLY REDUCE THE PROFITS OF EVERY BUSINESS

Mistakes are sometimes excusable but there is no reason why you should not handle Paterson's Wire Edged Ready Roofing, Building Papers and Roofing Felts. A consumer who has once used Paterson's "Red Star" "Anchor" and "O.K." Brands won't take any other kind without a lot of coaxing, and that means loss of time and popularity to you.

"Seeing is Believing"

¶ As the Ross Sporting Rifle represents the best in modern rifle manufacture, the highest grade materials and minute accuracy in workmanship, it is to your interest to learn fully about this Canadian Rifle—

¶ The Ross Straight Pull 303 Sporting Model M is one of our leaders to retail at $26. The barrel is the celebrated Ross high pressure, non-fouling, gun-barrel steel — The breech action is dependable.

Our representatives are now demonstrating the merits of this rifle—It places you under no obligation to drop us a line to make sure you will be on their calling list.

Our advertising policy is co-operative.

Don't Wait for Something to Turn Up. Try a "WANT AD."

The Only
"Electrically Welded"
Steel Wire Fence

The **Pittsburg Perfect Fence** is conceded to be far superior to any other fence on the market. It is a great **winner,** a great **seller** and has solved the problem of fencing poultry, horses, hogs and cattle with one style of fence.

Will **stand** ordinary as well as **hard usage.** Will not **sag** in summer nor **break** with the cold in winter.

It is made of the **best material** for fencing purposes. The stays will not **slip** nor can they be **moved** out of place.

Will **conform to the most uneven ground.**

No **slack wires** to spoil the appearance as well as the efficiency.

Does not **require** an expert to erect.

The **stay** wire is made as large as the **line** wire.

It is low priced.

RICE LEWIS & SON, Ltd.
Toronto

Something You Ought to Be Selling

The New Century method of washing has succeeded, not because of its ease, speed and simplicity only, but because it gives better results than are possible with any other method.

This machine has a wringer stand too, not a rickety affair, but a convenient, strong, rigid attachment, always in position, never in the way.

New Century Style "B"

The experience is in the machine. You'll hear no complaints of it and have no excuses to make.

They are the best there is.

Dealers, don't load up with experiments, it is a losing game

FREEZERS

For the next few weeks watch this page weekly for pointers in Spring Buying.

Sizes : 1 Pt. to 25 Qts.
With Fly-wheel, 2 to 25 Qts.

Dana Peerless Freezer

is growing vastly in popularity. In the opinion of those who use it, no other freezer is so satisfactory. Its simplicity of construction, uniformity of results, and exceptionally easy action have made it the leading favorite with all who know it. Its sales multiply rapidly wherever introduced.

For those who want a lower-priced freezer—the

Dana Frezo

Sizes : 1 to 12 Qts.

fills the bill better than any other. The reputation of the Dana Peerless helps it with the public and makes it easy for dealers to sell. Its construction is first class, and its sales are constantly increasing in all sections.

Hardware Merchants,

MONTREAL, - - - - CANADA

YOU CANNOT MAKE SALES

Pink's "Soo" Duck Bill Peavey.

unless you have the goods that are wanted. Just now is the season to sell lumbermen's tools for the spring drives. Peavies and pike poles are now being sought by the lumbermen. For mill equipment such tools as light cant dogs, pickaroons and hookaroons are required.

We have all these goods in several different makes and sizes suitable for handling pulp wood, ties, cedar poles, and logs, and can supply them in different styles used by the lumbermen from New Brunswick to British Columbia.

If you wish to place your order let us have your specifications, our prices will secure the order and leave a good profit for you.

Pink's Patent Clasp Cant Dog.

Log Sorting Pike Poles, 12 to 18 feet.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines These enquiries come from Wholesalers, Manufacturers and Retail Dealers, who usually intimate they have looked through Hardware and Metal, but cannot find any firm advertising the line in question. In the majority of cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay them to advertise in larger space.

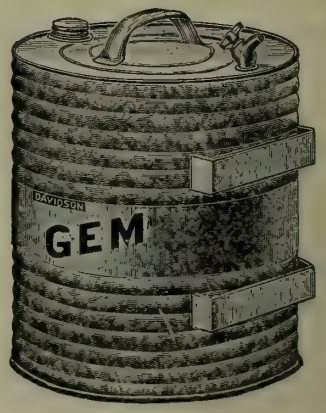
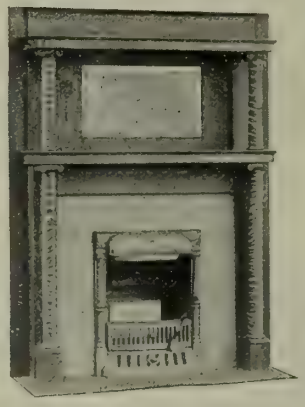
DAVIDSON GEM OIL TANK

(IMPROVED STYLE)



Size: 5 Gallons

Body galvanized after being made up **Fitted with special dripless kerosene tap**



The advantage of the Tank is that it can be carried upright in a waggon or otherwise, and the tap being then on the top is not in the way. There is therefore no risk of the tap being accidentally opened or knocked off and the oil spilt.

Placed on its side (as illustrated), on table or shelf, at convenient height, it is always ready for use, and makes the filling of lamps an easy task.

NOTE.—For this very original Oil Tank we have created a general demand, and any imitations we take as the sincerest flattery.

MAKE YOUR OWN LIGHT

IT'S CHEAPER AND BETTER.

"S. S." GAS LIGHTING MACHINES

A Few Points of Superiority based on Comparisons let US tell YOU about the others.

MODEL E MACHINE

OUR No. 1 SINGLE ARC
500 Candle Power

OUR No. 3 SINGLE ARC
500 Candle Power

OUR No. 2 SINGLE ARC
500 Candle Power

THE "S.S." GAS LIGHTING MACHINE—The only gas machine that runs without pumping under a uniform pressure. The only gas machine that will successfully operate one gas fixture if desired. The only gas machine that can be generated in thirty seconds and without the use of alcohol or liquid gasoline. The only gas machine with a safety vent and escape pipe. The only gas machine with an automatic governor. The only gas machine with a seamless generator and the only one withan entirely seamless copper tank.

THE "SYLVESTER" LIGHT—Increases the brilliancy 100 per cent. Decreases the operating cost 50 per cent. No globes to break or clean. No mantles dependent on wire or magnesian supports. Less heat than an electric arc and gives more light. No odor from unburned gas or the products of combustion. No sound from the light, absolutely noiseless. No shadows cast all light thrown down. No flickering, the only steady light upon the market. A gas fixture more ornamental and unique, has never been invented.

Not one drop of oil passes through a hollow wire. We can give you cheapest insurance.

THE "SYLVESTER" NEW PROCESS MANTLE. Shipped in an envelope. Upon removing from envelope, can be crumpled up without danger of breaking. When straightened out, it's just as good as new.

WRITE US FOR PRICES—DO IT NOW.

IMPORTANT TO FARMERS

Your fences are your fortress against loss and damage. They must be strong enough to resist invasion from without, and to keep within bounds your flocks and herds. You can't afford to take chances on soft, slack, or brittle wire fences, which may fail just when most needed.

Peerless Woven Wire Fence

has the elastic springiness and resisting qualities that make an A 1 farm fence. Once up it lasts—no breaking—no falling down. There are reasons why. We can't tell them all in this ad, but if you will write to us we will send you some valuable fence facts.

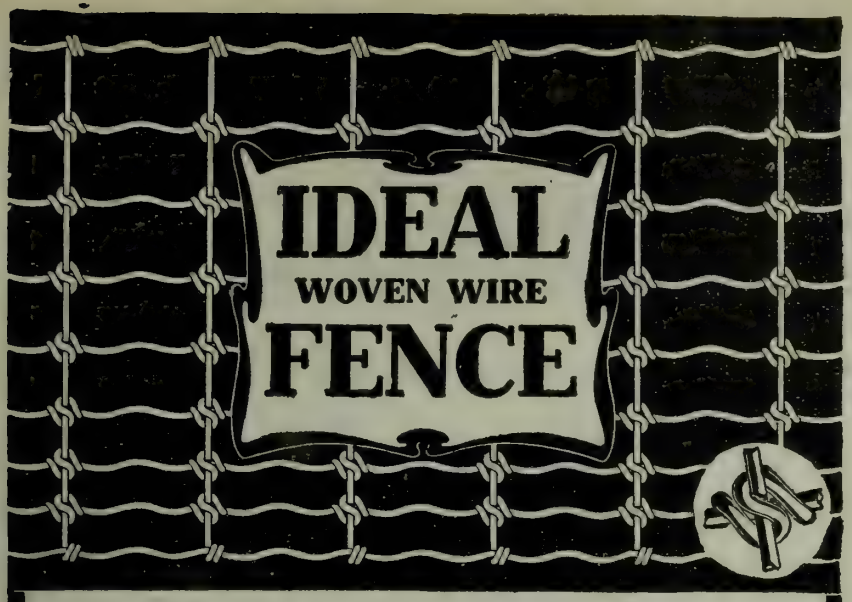
A Grip on Your Good-Will

If you will read through one copy of Plumber and Steamfitter of Canada, you will decide that you could not afford to be without it, if the subscription price were $5.00 per year instead of 50c. per year, which is the rate to Hardware and Metal subscribers.

The fact that we hold practically all of our subscribers, shows the strong hold we have on their good will.



Our editors and correspondents are on the look out for every job that is worth describing and illustrating. We show our readers the best work that is being done by Plumbers and Steamfitters in the various provinces of the Dominion; tell them of the difficulties that have been encountered, and explain how they have been overcome.

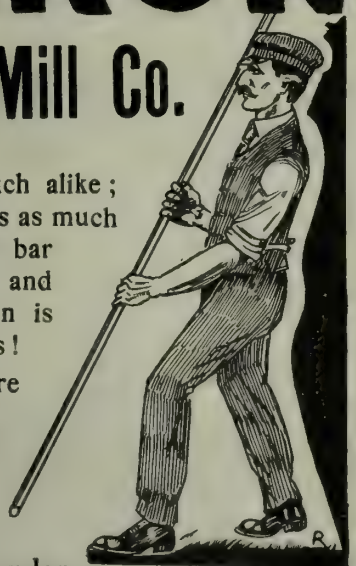
Subscription price 50c. per year to subscribers of Hardware and Metal.

Is not this paper worth one cent per week to you?

Plumber and Steamfitter of Canada

MONTREAL TORONTO WINNIPEG

Why not sell a fence that will advertise your business? Ideal Fence makes people stop and take notice, and it stands inspection.



Ideal is the standard Farm and Railroad Fence of Canada. Big, strong wires—all No. 9,—heavily galvanized and firmly locked. See how the patent lock grips uprights and horizontals together at every crossing. No chance for slips. Wires are gripped on five bearing points.

Good margin in Ideal. We want one live man in every locality. Write for catalog and Dealer's Terms.

The McGregor Banwell Fence Co., Ltd., Dept. O, Walkerville, Ont.
The Ideal Fence Co., Ltd., Dept. O, Winnipeg, Man.

BAR IRON

London Rolling Mill Co.

All bar iron may look pretty much alike; but the fact remains that there is as much difference between good and bad bar iron as there is between salt and sugar. The best test of bar iron is use. Judge it by how it serves! Many hundreds of hardware store customers testify that London Bar Iron can not be excelled for quality, even though the price is so moderate.

We want you to handle London Bar Iron. Why not test it by a trial order?

A Ventilator That Ventilates

It is important in selling a Ventilator to sell one thatkeeps in order, that works all the time.

AEOLIAN VENTILATORS are so skilfully constructed and so nicely balanced that they are driven not only by the slightest current of air, but by the difference of temperature within and outside the building.

We allow dealers a liberal profit.

Testimony

Montreal, June 7th, 1901

Messrs J. W. Harris Co., Limited
Montreal

Dear Sirs,

I have been using your "AEOLIAN" Ventilators on several houses in this city with the best results. The tenants of these houses declared that your Ventilators are of great advantage to them. I also installed two (2) 18" on my stable and I can say that your Ventilator cannot be surpassed by any to take out the sweating or the bad smell in any room.

PROTECTION and SECURITY

For the Dealer Protection, For the Purchaser Security.

This is our 1908 program. Our Dealers in 1907 secured their choice of the Largest and Best Business. We do not worry about where they stand, but we fear that some Good Merchants do not know what great assistance we can and do give our friends. We are the Originators of the Protection Plan. Because it is a success, we of course have many imitators, but our Goods and Methods cannot be duplicated.

There will be much farm building done in 1908, by present indications. Get in line to look after your share. The best and surest way is to get in touch with us. A post card will do it.

"Sure-Grip" Shingles and "Galt" Corrugated Sheets combined with Galt Salesmen and Galt Methods will work wonders.

THE HORTON MFG. CO., Bristol, Conn., U.S.A.

R. N. SCOTT, Canadian Representative, 200 McGill St., MONTREAL, QUEBEC.

Do you want the Refrigerator trade of your town? If you do, then you must sell the

White Frost Refrigerator

because it is the one, and only one, Refrigerator that is strictly sanitary in every respect. Look at it, and note. It is a beautiful piece of furniture, spotless outside and inside as the pure, driven snow. It is a metallic refrigerator, cyliadrical in form, made of galvanized sheet steel, and provided with 1¼ inch air space between walls; thoroughly insulated with Maltha and Asbestos, the combination of which is recognized as the best material for insulation that has been discovered—certainly the most expensive. Solid brass trimmings. It cannot shrink, swell, warp or decay. There is not one bit of wood as large as a toothpick connected with it in any manner. It is coated with white enamel inside and out (excepting the ice chamber,) and this enamel is thoroughly baked on. It is the handiest Refrigerator made. Has revolving shelves; no reaching over a pitcher of milk or jabbing a sleeve into a dish of butter. Just turn the shelf and everything is in front of you. The shelves are made adjustable can be raised, lowered or removed, and replaced in a minute. Shelves are made of wire and beautifully tinned. Light and strong, with no surface to catch the drippings from an accidentally upset dish, but are alway clean. It is guaranteed to maintain as low a temperature and as dry an atmosphere in the provision chamber as any refrigerator made, and owing to scientific circulation, as well as thorough insulation, it is a great saver of ice, therefore the most economical Refrigerator. Being pure white, is what the name implies. **"White Frost"** (congealed purity,) and is handsome enough in appearance to adorn any room in the house. And it is everlasting in service. Sells on sight, and every one sold brings another customer. It is the one Refrigerator that appeals at once to the desires of the buyer. It is reasonable in price, and is, therefore, the Refrigerator all the people want. Send today for literature and prices—you cannot get close to a good thing any too soon.

"Dear Bob, I want you to buy me a White Frost Refrigerator."

Hardware Association Question Box

Report of the Ontario Retail Convention Continued from Last Week—About 30 Practical Questions Discussed—Report of the Committee on Constitution—Some Passing Side Lights on the Convention.

Hardwaremen unable to attend last week's convention of the Ontario Retail Hardware and Stove Dealers' Association in Toronto missed a treat when they failed to rub shoulders with their fellow dealers during the convention and listen to the discussions during the "Question Box" feature at each session of the convention.

Hardware and Metal would have liked to have published a verbatim report of this discussion, but the delegates present thought this unwise, so, while a fairly complete report is given, readers will understand that to secure the full benefits it is necessary to be personally present. Names are purposely omitted so that members could have perfect freedom in discussing grievances on the floor of the convention. Absent members, and even non-members, are entitled to a report, however, and so a fairly complete outline of the discussion on the various questions is given for the benefit of readers of Hardware and Metal—which includes practically 100 per cent. of the trade in Canada.

Mr. Wright, of Michigan, conducted the "Question Box" in a most able manner, the only criticism being a desire at times to rush the discussion and go on to another question before the first had been covered fully. This was illustrated in the first question on Wednesday afternoon, in which Mr. Wright gave his Michigan experience regarding the sale of a certain line of goods, his ideas being out of harmony with conditions in Ontario. Before, however, the delegates had time to break into a discussion, another question had been placed into Mr. Wright's hand and he was rushed onto a new problem. While the second and later questions were more fully discussed, the incident, and, in fact, the entire discussion, emphasized the desirability of having a longer convention than one and a half days, so that every problem confronting the delegates could have mature consideration.

Another point referred to during the "Question Box" discussion was the necessity of hardwaremen taking care of their trade paper and seeing that it is not left carelessly around to be read by customers and persons outside the trade. The publishers confine its circulation to hardwaremen alone and subscribers should be equally careful. Instances were told of some careless merchants using the trade paper containing wholesale quotations as wrapping paper for parcels. Such men cannot complain if their customers try to buy from jobbers or manufacturers and occasionally succeed.

The discussion on the various questions follow the method adopted being for Mr. Wright to briefly express his ideas on each question and then allow members to outline their views.

The Cash System.

Q.—What would be the best means of adopting the cash system, and what is the experience of those who have made the change by adopting a strictly cash business ?

A.—Adopt the cash system and sell for cash is the best way. Advertise in the papers you are going to do a cash business. Get a rubber stamp and stamp all bills "Terms strictly cash," and you will soon find the general run of people stop asking for credit. As regards boat builders, millmen, factories and contractors it is a different matter and you will generally have to give them credit to some extent.

One merchant gets a note from a contractor for a certain amount, and when he gets goods to the value of his note the merchant gets another note from him, and so on. There is no necessity of lowering prices when adopting the cash system, although a few lines may be cut at first to attract attention.

F. W. Jeffery, Midland, said he had not had a long enough experience with the cash system to speak with authority. He had looked for a slump in business as a result, but had been pleasantly disappointed as at stocktaking he had one-third less on his books than a year ago. The ordinary customer had soon stopped asking for credit, but he still gave credit to the boat and mill men.

W. J. McAllister, Kincardine, also said he expected to lose business by adopting the cash system, but had not done so. Outside of a few big corporations he had cut credit out completely last May. "Did you make any change in prices ?" he was asked. "A little at first," was the reply. Answering another question he said he did not sell a stove on credit last season, and he did the largest stove business in town.

* * *

Q.—Is it better to handle a cash and credit business by a cash register or a cash carrier system ?

A.—With an ordinary cash register it is very difficult to avoid mistakes, and many merchants are disappointed because their cash does not come out correct. A register costing about $500 has a drawer for each clerk, so that the blame falls on the right party. With the cash carrier system a girl in the office can look after the cash for a few dollars a week, and the change is checked by the clerk and customer. One merchant said he had the cash carrier system through the store, and a register in the office, and the cashier registers all the sales. Another merchant, who has used both methods said he preferred the carrier system to cash registers.

Store Bookkeeping.

Q.—How much stock should be carried where total sales amount to $8,000 a year ? How much when they amount to $10,000 and $12,000 ?

A.—A merchant should turn his stock over from two to three times a year. When total sales amount to $8,000 a year, stock carried should be between $3,000 and $4,000 ; when $10,000, between $4,000 and $5,000 ; when $12,000, between $5,000 and $6,000.

* * *

Q.—If you are doing both a cash and credit business what is the best system of bookkeeping ?

A PAT ON THE BACK.

After getting home and thinking over the convention I have come to the conclusion that I had one of the best times that I ever had at a convention. I must say that I think your people have got the right idea of a convention, as I never in all my experience saw a body of men so anxious to get at the bottom of things, and to get all the information that they could as your people were, especially along the lines of the Question Box, which is one of the strongest cards that can be used as it brings out, or did at your convention, such an array of argument that most members were able to learn something to their advantage, and will go to their several homes and tell their competitors what a good time they had and insist that they all attend the next convention.

These meetings are the best and only mediums in which to get the manufacturers, jobbers and dealers together and to keep them in much closer touch one with the other, and I think that the jobbers will find that we as retailers are not such a bad lot of fellows as they might think. I have found that you can do very much more with people by having a heart to heart talk with them than you can by a long correspondence, and that is just what these meetings will do. I was very much pleased with the manner in which Howland, Sons & Co. did their work in furnishing such an elaborate banquet as they certainly did themselves proud.

I certainly appreciate the courtesy shown me throughout my whole stay with you, and I hope that it may be my pleasure to again meet with you at some future time, and I want to express my gratitude for the very pleasant manner that you and the other officers extended to me, and I hope that the time may come when I can return the compliment, and that I may have the pleasure of meeting you at Detroit in August.—P. A. Wright, Holly, Mich.

A.—The loose-leaf system is preferable on account of its simplicity and advantages for filing for future reference.

* * *

Q.—Can any of the members tell us what it costs them to do business?

A.—One member said his costs were 14 1-7 per cent. of sales, while paying himself a small salary. Another said 14 per cent of sales. A third, 16 per cent of cost, and a fourth 13 per cent. of sales, allowing the firm members good salaries. This firm, however, does a wholesale and retail business. Less than 20 per cent. on cost is considered to be doing well.

* * *

Q.—What proportion of a tinsmith's or plumber's time is paid for, and for which he earns nothing?

A.—From one-quarter to one-half of his time a tinsmith does not earn his salary. He spends half an hour or so on a paltry little job for which the customer is charged five or ten cents.

A. W. HUMPHRIES, PARKHILL,

The Association's First President and Last Year a Member of the Executive.

Q.—What is the best system of keeping petty accounts?

A.—Keep petty accounts the same as any other accounts. Put in the ledger so you can refer back to them at any time. Small accounts kept on files are often lost, mislaid or overlooked, and cause a lot of unnecessary trouble.

Guaranteeing Goods.

Q.—Should retailers guarantee edge tools, such as cutlery, axes, scythes, cross-cut saws, etc.?

A.—Yes! guarantee all lines of good edge tools, and if a man brings an article back with a complaint, give him another and be nice about it. You can send it back to the manufacturer and not lose anything. If it is a line you don't guarantee, tell your customer so, and offer to sell him another at half price and both stand a half loss. He will be satisfied and your profit on the two articles will pretty well cover any loss

Advertising Methods.

Q.—What is the best method of advertising; newspapers or circulars?

A.—Newspapers are the best advertising medium we have. Use as many small cuts as possible, like Russill's ads. in the Toronto papers. People will look at an illustration when they would not be beothered reading an ad. For a special sale or announcement small attractive circulars can also be used to good advantage.

* * *

Q.—How would you conduct a special sale of graniteware and tinware?

A.—Advertise well in newspapers using a lot of small cuts. Display goods in window, and on special counter, marking the price on all goods in plain figures.

* * *

Q.—What is the best method of disposing of surplus stock?

A.—Put it in sight. Display and advertise it.

Country Store Competition.

Q.—What is the best method to overcome country store competition?

A.—Get same class of goods and sell at same prices.

* * *

Q.—What is the best plan to make a success of a hardware business in a village of 800 or 900, where general stores carry hardware and tinware, and only ask their credit customers to settle their accounts once a year, and these general stores buy all kinds of farm produce? !

A.—If a merchant can do a credit business, and only ask his customers for a settlement once a year, he must have big profits somewhere.

Show customers the superiority of the lines you carry. Tell them your profits are smaller, and that they get the benefit of a cash or short credit system—not only a direct saving, but better goods for less money.

* * *

Q.—How best to deal with wholesale dealers who supply small general stores through the country, say within twenty miles of Toronto, London and Hamilton?

A.—Show the jobber it is to his interests not to sell these people, and insist on your jobber cutting them out.

"Let the retailer get busy and sell these stores himself at a close margin," said a member in referring to jobbers selling to general stores away from the large centres.

Selling to Consumers.

Q.—What course should a dealer take to overcome the competition of certain firms in the glass business, who come in and sell direct to his contractor customers?

A.—Glass firms will sell almost anyone at the same price they will a dealer. The association should take this matter up with the different glass firms after a complaint with full particulars is made. If your jobber is doing this kind of business, cut him out.

* * *

Q.—How about one of the largest wholesale jobbers selling a groceryman a full line of graniteware and tinware, ash sifters, handled axes, fire shovels, etc.?

A.—Buy similar lines yourself and sell at the same prices or a little less. Show your customers the superior points of your lines, and talk quality first, last, and all the time. Give the best value possible. Similar lines are often quite superior.

Meeting Unfair Competition.

Q.—How best to meet cut prices where there are other competitors who are not members of the association?

A.—Your competitors should be your best friends. Get together and come to an understanding, so that there will be no price-cutting. Have one price and stick to it.

* * *

Q.—Does the system of selling horse nails as adopted by a manufacturer (now that horse shoes have been added) meet with the approval of this convention?

A.—No! but it's hard to stop it. In some parts of the country the manufacturers' travelers take the orders from the blacksmiths and hand them over to the dealers; while in other districts

E. BROCKLEBANK, ARTHUR.

One of the Younger Members who Helped to Make the Discussions Interesting.

they sell the blacksmiths direct, and the dealer only gets a little sorting trade left over. But you don't have to carry this line. Buy a similar nail equally as good, with a larger margin of profit, and solicit the blacksmith's trade yourself. You can also secure a good proportion of their trade in other lines you carry. This has been done successfully.

Cartage and Boxing Charges.

Q.—How are we to know when we are overcharged on boxes?

A.—You can't tell. Some merchants pay no boxing or packing charges, as they ship the boxes back to their jobbers. Some pay freight on boxes being returned, while others do not.

Q.—On what grounds do wholesalers decline to cut off cartage charges when they deliver to customers in Toronto and suburbs?

A.—A lengthy discussion took place on this question. Many delegates reported that they were not paying cartage charges. General objection was taken to accepting the charges when deducted by travelers out of their expense money. A strong feeling existed in favor of the members as a body take united action.

Store Salesmanship.

Q.—What is the best way of disposing of surplus stock? Would you advise a sacrifice sale?

A.—The quicker a man makes a loss the less the loss will be. To reduce general stocks advertise liberally. Cut prices on general goods, but not on specially branded lines. Advancing prices has even been known to help to move slow moving stock. People who pay good prices for goods are more likely to think they are getting a better article than if they pay low prices.

* * *

Q.—How can ladies be attracted to the hardware store?

A.—Have a store fit for ladies to enter. Don't have the store filled with rubbish and dust half an inch thick. And when a lady comes in treat her as a lady.

A Member—"Would't you use your windows?"

Mr. Wright, of Michigan, replied that that was his weak point. He didn't change his windows very often, but to get the women trade the window ought to be used. "I'll have mine changed as soon as I get home," he added.

* * *

Q.—What is the best method of marking goods—in plain figures or with private marks?

A.—Mark in plain figures. Don't let people think you are ashamed of your prices.

Lighting Systems.

Q.—What has been the experience of members in store lighting by gasolene? What system is used, cost of same, satisfaction received and cost of running the lights? As electric lighting is so expensive we are looking for something to replace it.

A.—Electric light was considered the best, if not too expensive. The cost can be lessened by using meters and by having switches to allow the windows to be lighted and the store kept dark, etc. Reference was made to the Ann Arbor system, the hissing noise of which had been overcome by elevating the plant. Strong endorsation was given the system made by the Sylvester Manufacturing Company, Lindsay, Ont., by one delegate, he contending that it gave a brighter and cheaper light than electricity.

Other Questions.

Q.—Can the association take any steps to prevent the daily papers from publishing the wholesale prices of hardware articles?

A.—It was stated that the Toronto dailies had promised to discontinue publishing wholesale prices when requested to do so by the association. A member stated, however, that the Mail was publishing wholesale prices of paints and oils. The secretary of the association will write the Mail editor and members might also send personal letters, pointing out that merchants do not want such news, except through their trade papers, and it is unfair to give the wholesale prices to others.

* * *

Q.—Should a legitimate hardware or stove dealer, buy from a stove foundry who sell to implement agents who carry no stock?

A.—No.

* * *

Q.—Is it not advisable for hardwaremen to take action in connection to skates, viz.: Would it not be well to have special numbers or names for that trade exclusively?

A.—No discussion took place on this question.

Sell High-priced Scales.

Q.—What is the experience of the trade in selling scales? Are not cheap scales often sold where a little effort would sell a dealer a line on which there would be more profit?

A.—The general opinion of the trade seemed to be that the scale trade belonged peculiarly to the hardware dealer and should be one of their most profitable lines. The point was brought out, however, that the big profit was made on the better class of scales. To get the higher price, however, it was necessary for the dealer and his clerks to be thoroughly acquainted with points of superiority claimed for these lines by the manufacturers.

PREPARING FOR 1909.

"We are in receipt of your letter notifying us that your association will meet at Hamilton next year, and we look forward with pleasure to the occasion. The invitation we extended was entirely spontaneous on our part. We have not yet consulted any of the manufacturers, but as this is the Birmingham of Canada, and there are numerous manufacturers here who chiefly depend upon the retail merchants to distribute their goods, we have no doubt they will assist in welcoming your association. We would like you to visit Hamilton for consultation about a month before the proposed visit, and with your aid we will organize an influential committee among the manufacturers and ourselves. The writer has no doubt our combined efforts will succeed in making the event one to be remembered.—Wood, Vallance Co., Hamilton."

New Constitution and By-laws

Revision Made by Committee Brings the Constitution Up to Date and More Clearly Defines the Duties of Officers.

CONSTITUTION COMMITTEE'S REPORT.

The committee reported as follows:

In the preamble substitute the word "differences" for "annoyances."

Articles 1 and 2, no alteration.

Article 3, section 1, after the word "committee" add: "Two of whom with the secretary shall constitute a grievance committee."

Section 2, no alteration.

Strike out sections 3, 4, 5, and 6, and substitute new clauses 3, 4, 5, 6, 7, 8, and 9, as shown in revised constitution.

Article 4, section 1. The annual meeting for the election of officers and reception of reports and the transaction of general business, shall be held between the 1st day of Feby. and the 31st day of March, the place of meeting to be decided by open vote at the annual meeting.

Article 5, strike out all words after the word "present."

By-laws.

Article 1. Strike out all words after "$3" on the fourth line and add "dating from the 1st day of March of each year."

Article 2. Quorum. Strike out the words "a majority" on the 1st line and substitute the words "five members."

Article 3. No alteration.

Order of business. Rearrange by transposing Nos. 8 and 11 and Nos. 9 and 10.

Amended at the annual meeting of the association, held Feb. 12 and 13, 1908.

A. W. Humphries, Parkhill.

Frank Taylor, Carleton Place.

C. F. Moorehouse, Toronto, chairman of committee.

Discussion on Report.

The report was taken up clause by clause.

On motion of the treasurer, his bond was increased from $200 to $500.

It was decided that the executive should meet at least twice instead of four times each year.

The committee recommended May 1 as the date of beginning of membership year, but after much discussion March 1 was chosen.

Discussing item two on the order of business it was decided that the minutes be printed in Hardware and Metal and distributed to the delegates.

The committee recommended against the insertion of a clause allowing travelers to become members and as reported a week ago the matter was laid on the table for a year after a lengthy discussion.

A motion to drop the words "and stove dealers" from the name of the association was withdrawn after a brief discussion, and the committee's report as amended adopted.

The revised constitution reads as follows :

CONSTITUTION AND BY-LAWS

Of the Ontario Retail Hardware and Stove Dealers' Association. Adopted at Toronto, May 16, 1906, and amended Feb. 13, 1908.

PREAMBLE

The objects of the Ontario Retail Hardware and Stove Dealers' Association are primarily to promote, foster and encourage the formation of a strong Provincial Association in Ontario through the medium of which local retail hardware and stove dealers may be brought into closer sympathy one with another, where their differences or grievances peculiar to each particular locality may by concert of action through its provincial association be adjusted or eliminated, and for the more satisfactory adjustment of matters of general interest to the trade with respect to legislation, insurance, freight rates and all questions the better arrangement of which would tend to the mutual advantage of its members.

CONSTITUTION

Article I.

Name and Object.

Section 1. The name of the association shall be the Ontario Retail Hardware and Stove Dealers' Association.

Sec. 2. The object of the association shall be to promote the interests of and secure friendly co-operation of its members.

Article II.

Membership.

Sec. 1. Any person, firm or corporation in the Province of Ontario engaged in the retail business of selling hardware, stoves, tinware, paints, oils and glass and who carries a general assortment of stock in any of the above lines known and recognized as a regular retail dealer may become a member of the association, all applications for membership subject to approval of executive committee.

Article III.

Officers.

Sec. 1. The officers of the association shall be president, first vice-president, second vice-president, secretary and treasurer, who with six members elected at the annual convention shall constitute the executive committee, two of whom with the secretary shall constitute a grievance committee.

Sec. 2. The officers shall be elected annually by ballot and shall hold office until their successors are elected.

Sec. 3. The president shall preside at all executive and annual meetings, summon all meetings, declare the result of all ballots, sign all orders for the payment of monies, shall be ex-officio a member of all committees, shall be responsible for the safe keeping of the bonds of the officers of the association and shall open and close all meetings.

Sec. 4. The vice-president shall assist the president in the discharge of his duties, and in his absence shall preside at any meeting.

Sec. 5. The secretary shall attend all executive and annual meetings, and shall keep a true record of all the proceedings in a minute book provided for that purpose, if unavoidably absent, the books and records to be sent to the meetings, he shall collect all fees, contributions, etc., pay over to the treasurer all monies so received, taking from him a receipt for the same, shall close his books on the 31st day of December of each year, and have the same ready for the auditors' inspection, by the first day of February following, he shall together with the president sign all orders for the payment of monies by the treasurer, conduct all correspondence of the association, etc., and shall give a bond for the sum of $200 and for his

G. A. BINNS, NEWMARKET,
A Valued Member of Last Year's Executive Committee.

services shall receive such remuneration as the association may grant from time to time, the above bond to be paid for by the association.

Sec. 6. The treasurer shall receive from the secretary all monies that he has collected, giving a receipt for the same, and shall disburse them through vouchers signed by the president and secretary, and shall give a bond for $500, said bond to be paid by the association.

Sec. 7. Two auditors shall be elected, whose duty it shall be to carefully audit the books of the secretary and treasurer, comparing the vouchers, etc., and shall certify to the correctness of the same.

Sec. 8. Three scrutineers shall be appointed at the annual meeting to examine all ballots cast and to report the result to the meeting. No candidate for any office shall be eligible to act as scrutineer.

Sec. 9. In case of a vacancy in any of the offices of the association, the same shall be filled by the executive committee until the next annual meeting.

Article IV.

Meetings.

Sec. 1. The annual meeting for the election of officers and reception of reports and the transaction of general business shall be held between the first day of February and the 31st day of March, the place of meeting to be decided by open vote at the annual meeting.

Sec. 2. The executive committee shall meet at least twice during the year or at the call of the president, for the transaction of all business of interest to the association.

Article V.

Amendments.

Sec. 1. Amendments of the constitution and by-laws may be made at any annual meeting by a vote of at least two-thirds of the members present.

BY-LAWS.

Article I.

Finances.

The finances of the Ontario Retail Hardware and Stove Dealers' Association shall be provided for by an annual membership fee of three dollars ($3) dating from the first day of March of each year.

Article II.

Quorum

Five members of the executive committee shall constitute a quorum for the transaction of business at any meeting.

Article III.

Proxies.

Each member shall be entitled to one vote or may in writing appoint a proxy at any meeting of the association.

Order of Business.

At the annual meeting of the association the order of business shall be :

1. Roll call of officers.
2. Reading minutes of last annual meeting, which shall be printed for distribution and, if correct, adopted and signed.
3. President's address.
4. Report of the executive committee.
5. Report of the secretary.
6. Report of the treasurer.
7. Report of special committees.
8. Unfinished business.
9. Election of officers for the ensuing year.
10. General business.
11. Reading of papers and discussion thereof.

CAUGHT ON THE FLY.

"I'm a strong believer in united effort."—Peleg Howland.

"That's the best 'question box' discussion I ever listened to."—Porter A. Wright, Michigan, after the Wednesday afternoon session.

"Mr. Howland asked me to step aside this year. Now I hear that Hamilton jobbers and manufacturers want to

do the honors next year. I give notice that I want to entertain the association two years hence."—Col. J. B. MacLean, publisher of Hardware and Metal.

"The association has landed."—Secretary Wrigley.

"I'm only a twelve hours' baby in the association but I now realize my duty to the trade."—D. Cinnamon, Lindsay.

"Try to maintain prices, support your organization and have faith that 1908 is going to be a splendid business year."—James Hardy, Secretary Canadian Wholesale Hardware Association.

"We started with sixteen members and now we have seven hundred. If you keep up your present rate of progress you'll have an even better record."—Vice-president Wright, of the Michigan Association.

"I came from the farthest point and I think I enjoyed the convention the most."—C. B. Miner, Cobden.

"I've had loyal support from the executive this year but none know bet-

H. BECKER, NEW HAMBURG,

A Faithful Member of last Year's Executive.

ter than I how much we owe to Hardware and Metal and our secretary."—President Scott.

"Your organization will continue to grow if it is conducted on the right lines."—Peleg Howland.

First Vice-president Brocklebank was absent owing to illness but the delegates did not forget him as he sent a good substitute in his son.

The election of J. R. McMillan, Guelph, to the executive, despite his absence, is a tribute to the esteem Mr. McMillan is held in by those who knew him as a traveler. It also expresses the general desire to see the men in the cities take hold of the association work.

"I enjoyed every session of the convention, and I have come home more than ever satisfied that the hardware business is one of the best in the land. If we all work together now we will be able to accomplish a great deal with our organization. I thank you for all the favors shown me while in Toronto."—R. C. Chown, the W. W. Chown Co., Limited, Belleville.

In last weeks report, reference was made to a statement made by Deputy Minister of Agriculture James, that in ten years Ontario farmers had received $35,000,000 for cattle, bacon and cheese exported. The paragraph should have read that their receipts had increased that amount for these items during the past ten years. Hardwaremen can do much towards encouraging the farmers in their district to engage in productive farming so that both their earning and spending power can be increased.

"We've already formed plans for a district association down our way, and you'll hear from us later."—W. H. Stafford, Deseronto.

Three of Oshawa's firms are now enrolled on the association books.

The glass end of the business seems likely to give the grievance committee some work during the coming year. Roofing is another trouble maker. Complaints of grievances in these branches have already been received.

Seventeen new members were enrolled during the convention and several more in arrears paid up for both 1907 and 1908.

If more hardwaremen had the practical experience of working together the Barrie hardwaremen have had, there wouldn't be many on the outside of the association.

W. F. MacPherson, Prescott, came a long way to the convention, but its safe guessing that he'll be willing to travel 40 miles farther next year.

"I've enjoyed the convention immensely."—B. F. Ahrens, Hanover.

Eastern Ontario sent a larger delegation than to any previous gathering. They'll be wanting the convention at some eastern point in a year or two.

On January 29, McKillop & Ferguson, West Lorne, wrote the secretary saying they had about decided to drop their connection with the association, considering that the organization "was composed of men whose chief desire was to hear themselves talk, rather than formulate plans for improvement." Before passing final condemnation, however, Mr. Ferguson decided to attend last week's convention. Instead of being quitters, the West Lorne firm have paid two years' dues, until March, 1909, and have also taken a supply of collection letters. If a firm wants to stay on the outside it isn't safe to attend one of the hardware conventions. Before you know it you'll be hunting up the treasurer to unload some of the wherewithal to keep the pot boiling.

I. W. Bennett & Son, Gananoque, found it impossible to send a representative to the convention, but they did the next best thing—sent a good live question for the "Question Box" discussion.

EXECUTIVE MEETING.

President Hambly called the new Executive Committee to order after the adjournment of the convention last Thursday and several important matters demanding immediate attention were dealt with. It was decided that the Executive should meet in Toronto during April at the call of the Secretary, advantage being taken of the cheap railway rates during the Easter holidays, if possible.

Motions were made that the sum of $25 be handed to Mr. Wright to cover his expenses while attending the convention in Toronto, and honorarium of $50 be voted to Secretary Wrigley as a mark of appreciation of his services during 1907.

The Treasurer and the two Auditors were appointed a committee to investigate the question of fire insurance, dealt with during the convention, the committee to report to the Executive at the meeting in April. The Executive adjourned at 5 p.m.

CAMPED OUT WITH OPPOSITION.

"We enjoyed ourselves immensely at the convention, and intend to make ourselves active partners in future, though in the past we have been rather 'silent.' We think that our two days in Toronto

FRED. OTTON, BARRIE,

One of the Active Workers Who Never Misses a Convention.

this week will be productive of good in our own town, as we spent the most of our time at the convention in the company of one of our opposition, and we learned more about him in those two days than we have in the last two years, and we most heartily feel that he is a whole lot better fellow than we gave him credit for being. We enclose $3.00 for the man that doesn't like fish."—John Bailes & Son, Oshawa.

TRAVELERS AT CONVENTION.

S. F. Bowser & Co., Limited, Toronto, had a large exhibit of self-measuring oil tanks in one of the sample rooms at the Palmer House, during the convention of the Ontario Retail Hardware and Stove Dealers' Association, the exhibit being in charge of Mr. W. R. Hantz, A. E. Moffatt, city traveler, and C. S. Shetrick, Eastern Ontario representative.

An interesting exhibit was made by T. B. Lee, a Toronto jobber. His line of German skates and German English cutlery was shown by Mr. Green, Eastern Ontario and city traveler.

The Guelph Stove Co. were to have

made an exhibit, but cancelled their space a few days before the convention.

The Gurney Foundry Co., represented by E. Holt Gurney, S. E. Ellis and E. Macintyre (late of the Hobbs Hardware Co.), helped to entertain the visiting delegates.

Clare Bros. & Co., Preston, represented by Herman and Albert Clare, were also on hand to help make the visiting delegates acquainted with each other.

Shurly & Deitrich Co., Galt, were also in evidence in the presence of A. H. Vogt.

CO-OPERATIVE BILL DELAYED

Will Probably Not Be Brought Up At This Session—Strong Opposition Has Developed Among Retail Merchants.

From our Special Ottawa Correspondent

Ottawa, Feb. 19.—A curious situation of affairs has developed in connection with the business of the House, one which led to a vigorous protest on the part of certain members last week. Your readers are doubtless well aware that facilities are provided in the rules of both Houses for the passage of private bill legislation. Of course, it is expected that the notices and petitions are regular in the first place, and are presented within the time called for by the rules, and after that it is generally plain sailing.

Of public bills there are two classes, those which proceed from the Government others which are presented by private members. It is with regard to the latter that difficulty has arisen.

Under the rules adopted a year ago, Thursdays, after the first four weeks of the session, are automatically absorbed by the Government for its business. It so happens that Thursday is the only day in the week upon which public bills in the hands of private members have precedence, and as Thursday is now a Government day it has not been possible for Mr. Monk to reach his bill respecting co-operation. It may be that the Thursday order of business heretofore existing may be adopted for Monday, because Parliament can change its order of business as often as it pleases, but in the event of such a change not being made, the co-operation measure is now effectively killed for the session.

I asked Mr. Lemieux this week if he were prepared to impliment his promise of last session to take over Mr. Monk's bill as a government measure. Mr. Lemieux stated that he was as warm a supporter as ever of the principle of co-operation, but so far he had not found an over-whelming demand for it. On the contrary, he realized that there was a very strong feeling against it on the part of the retail merchants of the country, especially with regard to the provision which would make it so easy for a co-operative society to become incorporated. Personally, he was not desirous of forcing his views respecting co-operation on the people of Canada unless they wanted the measure, and therefore, for the present at any rate, it would be left an open question whether or not the Government should take hold of Mr. Monk's bill or introduce a somewhat different one.

From the statement of the Minister it would appear that it is now up to the retail merchants to make their influence felt if they desire to block this legislation, or at any rate to minimize it to such an extent that the retail trade of the country will not be injured. In the meantime Mackenzie King, Deputy Minister of Labor, is gathering the latest statistics and reports of co-operative societies in different parts of the world for the use of parliament should the measure be taken up at this or some other session.

F. D. Monk., M.P., in expressing his thanks for a copy of The Canadian Grocer containing the article on co-operation says:

"I think the co-operative companies you mention in the article as having failed were as a rule, only co-operative in name; they were, in reality, either firms or joint stock companies, but they differed absolutely in principle from real co-operative societies. The underlying principle of co-operation lies in the fact that the society can only deal with its own members and this is no doubt the reason why co-operative societies, real ones, have never gone into bankruptcy." Mr. Monk, it may be mentioned, is as keen upon the subject as ever, and if the rules of the House will permit, will press his measure this session no matter whether the Government decides to deal with the subject or not.

AMENDMENT TO CRIMINAL CODE.

From our special Ottawa correspondent.

Ottawa, Feb. 19.—Mr. Gervais, M.P. for Montreal, has introduced a bill to the House to amend section 498 of the Criminal Code in a manner which will be acceptable to the retail trade of the country. The section as it stands today in the statute, reads as follows:

498. Every one is guilty of an indictable offence and liable to a penalty not exceeding four thousand dollars and not less than two hundred dollars, or to two years' imprisonment, or, if a corporation, is liable to a penalty not exceeding ten thousand dollars, and not less than one thousand dollars, who conspires, combines, agrees or arranges with any other person, or with any railway, steamship, steamboat or transportation company—

(a) To unduly limit the facilities for transporting, producing, manufacturing, supplying, storing or dealing in any article or commodity which may be a subject of trade or commerce; or

(b) to restrain or injure trade or commerce in relation to any such article or commodity; or,

(c) to unduly prevent, limit, or lessen the manufacture or production of any such article or commodity, or to unreasonably enhance the price thereof; or,

(d) to unduly prevent or lessen competition in the production, manufacture, purchase, barter, sale, transportation or supply of any such article or commodity or in the price of insurance upon person or property.

2. Nothing in this section shall be construed to apply to combinations of workmen or employes for their own reasonable protection as such workmen or employes.

Mr. Gervais' amendment is to add the following words to sub-section (2):—"or to retail or wholesale merchants or employers for their own reasonable protection as such retail or wholesale merchants or employers." An additional sub-section places the onus of any prosecution on the Attorney-General of the province, and it is in these words: "No prosecution shall be commenced under this section without the fiat of the Attorney-General for the province in which the charge is laid."

The member for St. James' division of Montreal, has been led to submit this important amendment to the House by reason of what he regards as the unfair prosecutions which have taken place in certain Ontario cities, notably Hamilton and London. He regards it as unjust that one section of the community, workmen or employes, shall be permitted to combine for their own protection, while the retail merchants of Canada are debarred from this privilege under the existing law. Mr. Gervais holds strong views as to the responsibility of the Government in trade matters. Instead of bringing respectable merchants before the courts, the Montreal representative holds that the Government should assume the responsibility of protecting the consumer against trade restrictions. Thus, assuming that a Retail Grocers' Association or a Retail Hardware Association were abnormally or unfairly to increase prices on one or more commodities, then the Government could meet the situation by temporarily reducing the customs duty upon such articles. In this way Mr. Gervais would remove the stigma of criminality from retail merchants and at the same time protect the householder from extortionate prices.

RECENT CUSTOMS DECISION.

The Board of Customs has just made the following decisions, and customs officers will in future charge duties as follows:

Item		British preferential	General tariff
451	Hot air furnaces	15 p.c.	25 p.c.
453	Steam furnaces	15 p.c.	27½ p.c.
453	Heaters and coils	15 p.c.	27½ p.c.
453.	Hot water and steam boilers	15 p.c.	27½ p.c.
454	Galvanized range boilers	20 p.c.	30 p.c.

HARDWARE TRADE GOSSIP

Ontario.

Dreany Bros., hardware merchants, Cobalt, have assigned to George Mitchell, Cobalt.

Munro Bros., hardware merchants, Alvinston, have dissolved partnership by mutual consent.

L. A. DeLaplante, hardware merchant, East Toronto, has been made a License Commissioner for East York.

George Hentig, hardware and stove merchant, Kingston, has been appointed to the Board of License Commissioners.

Mackie Bros., hardware merchants, North Bay, have donated a handsome cup trophy for hockey competition and a schedule is being arranged.

Mrs. J. Miller, Guelph, who died suddenly last week, was not the wife of J. S. Miller, secretary of the Bond Hardware Co., but an esteemed aunt of his who lived at the same town.

The agents and members of the Frost Wire Fence Company, Hamilton, to the number of 125 were banquetted last week by their firm. The occasion marked the close of the annual convention of agents.

W. J. Wilson, Preston, Ont., for some time sales manager of the Metal Shingle & Siding Co., will represent that company on the road in future, covering the territory between Toronto and Montreal.

William Leonard Lambert, manager of the sales department of the Canada Cycle and Motor Company, Toronto Junction, died on Feb. 11, after a short illness. Mr. Lambert was forty-two years of age and leaves a widow and two small children.

The gasoline pot used for heating soldering irons in Button's hardware store, Stouffville, sprang a leak last week and caused a swift hustle for a few seconds. The offending mug was hurled through the window, regardless of glass or sash.—Stouffville Tribune.

After two week's illness, Thomas Wood, for twenty years a resident of Toronto, died on Sunday last. Deceased was 77 years old, and prior to moving to Toronto to live, retired, was a hardware dealer at Elora. Besides his widow, four sisters and one son survive.

Fred. Pym, Toronto, was sentenced this week to 60 days in jail for systematically stealing horse shoes and horse nails to the value of about $200 from Rice Lewis & Son. The youth was employed as assistant shipper for the above firm and shipped the kegs to a confederate to whom he sold them at about one-fourth of their value.

This week stock is being taken in the Central Hardware Store, Wingham, for the transfer of the business from H. Bishop to H. V. Hill, of Cannington. Mr. Hill is a young man who has had a number of years experience in the hardware business and as he is well known, his success is assured.

Jack Walker, of the Crown Hardware Company, London, had a close call for his life last week. A carload of paints were being delivered and the clerks were hustling to the limit. Just as a heavy barrel was being dumped onto the sidewalk, Mr. Walker slipped on the ice, releasing his hold on the barrel, and but for the presence of mind of two of the other men, who turned the barrel to one side, his life would have been crushed out. With the exception of a strained ankle and slight nervous attack he is none the worse.

Another change in the hardware trade of Goderich took effect this week, the business of E. P. Paulin having been purchased by the Howell Hardware Co. M. W. Howell is well known in connection with the hardware trade in Goderich, having conducted a business here for a number of years in partnership with the late R. W. McKenzie and later by himself. He knows hardware thoroughly and should make the business of the Howell Hardware Co. a large and successful one. Mr. Paulin has not yet decided as to his plans for the future.

Chief Justice Falconbridge, of Toronto, withdrew from the jury the action for $2,000 brought by Joseph Harrison, an East Gwillimbury farmer, against Henry Jones, hardware merchant of Uxbridge, for malicious prosecution which arose from the sale of a horse. His Lordship held that though Jones laid the information against Harrison, which brought about his being tried at Whitby on the charge of securing money by false pretences, the information was laid without malice.

Quebec.

F. O. Barber, of P. & F. Corbin, New Britain, Conn., called on the trade in Montreal last week.

J. A. Paquin, St. Eustache, Que.; W. H. Clapperton, Maria Capes, Que.; A. G. Dobbie, Brockville, Ont., have paid visits to Montreal.

D. Tetu, of St. Felicien, Que., has been visiting Montreal hardware circles.

Mr. Leroi, of Cote, Boivin & Co., Roberval, Que., has been visiting Montreal.

L. C. Davitt, formerly representing Lewis Bros., Montreal, in the Cobalt section, has been transferred to his old territory, and is now residing in Ottawa.

Gervais Freres, St. John, Que., dealers in wholesale hardware, oils and paints, suffered a severe loss from fire on Feb. 6th. The stock was covered by insurance. The cause of the fire is unknown.

A. Janowtizer, Canadian branch of the large Austrian house, has removed to new and larger offices at 128-129 Coristine Building, Montreal. This firm manufactures some excellent hardware lines, including granite ware, hollow ware and cast iron ware enamelled and tinned in their own large factories in Austria and Belgium.

The National Tool and Axe Works factory, Three Rivers, Que., owned and operated by Mr. T. G. Hawthorne, was totally destroyed by fire last week. The origin of the fire is unknown. The loss was $50,000. It is understood that the building was insured in Three Rivers Agencies.

J. G. Lewis, vice-president and general manager of Lewis Bros., Montreal, was married a fortnight ago to Miss Ethel Strathy at the residence of her father, H. Gordon Strathy, Pine Ave., Montreal, by the Rev. Dr. Barclay, of St. Paul's Church. Mr. and Mrs. Lewis are spending their honeymoon in the South.

Samuel A. Crowell, head of the hardware firm of S. A. Crowell & Company, Yarmouth, N.S., died Feb. 12, after a brief illness. He was stricken with apoplexy on Tuesday morning. Mr. Crowell was a prominent Liberal, an energetic Methodist worker and formerly a director of the Bank of Yarmouth. He was aged sixty-six. Samuel A. Crowell, lawyer, of Toronto, is a son.

It was rumored in Quebec on Feb. 1 that the Ross Rifle Factory was about to shut down and despatches to this effect were sent to newspapers all over Ontario. Sir Charles Ross, the president of the company, denies that the factory will close and his denial was borne out by the Minister of Militia. In his denial Sir Charles stated that he had not had any correspondence with the Militia Department regarding further orders for some time.

An interesting game of hockey was played at Lachine, Que., between teams made up from employes of the Dominion Wire Manufacturing Company, Montreal, office staff vs. mill. At the close of the game the score stood 4 to 1 in favor of the mill team. After dinner at the Strathcona Hotel, the usual toasts being honored, the party adjourned to the ball room where an enjoyable dance was held. The outing was considered one of the most successful ever held.

Nine men were killed in an explosion which took place in the plant of the Standard Explosives Company at Ile Perrot, near Vaudreuil, Que. The explosion occurred as the nitro-glycerine was being manipulated for dynamite, and the building and two mixing rooms were blown up. The explosion was heard quite plainly at Vaudreuil station, which is, at least, two miles away. The company, which has offices in Montreal, is engaged in the manufacture of high explosives and blasting powder, and also dealers in safety fuses, batteries, sporting powders. About 200 men are employed in the factory. The names of the men killed are. Pierre Menard, foreman; J. B. Robillard, J. Lauzon, Chas. Lauzon, J. Crepain, Archie Legault, A. Dunberry, N. Rousseau and O. Trepanier.

Western Canada.

J. A. Armstrong, of Kennedy, Sask., was in Winnipeg this week on business.

Fred Babb, proprietor of the Babb Hardware Co., Portage la Prairie, was in Winnipeg last week.

A. J. Falconer, Deloraine, was seen by a Hardware and Metal representative in Winnipeg last week.

C. C. Baker, of Gilbert Plains, and J. G. Rattray, of Pipestone, were in Winnipeg this week.

C. D. Waldon, of tne Pease-Waldon Co., returned to Winnipeg this week from an extended eastern trip.

D. Sutherland, of Dauphin, was in Winnipeg this week, attending the bonspiel and visiting the wholesale houses.

Wm. Chalmers, of Deloraine, Man., was one of the most successful of the hardwaremen competing in the Winnipeg bonspiel.

Williams Bros., hardware merchants, Gladstone, Man., have turned their extensive business into a joint company. The directors of the company are: A. G. Williams, Wm. Williams, B. Nairn, Rodney McCaskill and Miss Mustard.

The W. P. Miller Hardware & Heating Co., Calgary, has received the contract for supplying all iron work and for roofing the high school being built at that place.

J. B. Curran, head of the Brandon Hardware Co., Brandon, was seen by a Hardware and Metal representative in Winnipeg last week. Mr. Curran was on his way east to Toronto and other points.

United States.

The Iver Johnson Sporting Goods Co. are erecting a large eight-storey store building at Boston, Mass., in which to conduct their retail sporting goods business. The basement, first, second and third floors will be an ideal department store for the exclusive sale of sporting goods. The general offices of the company will be located on the third floor.

SCREW STOCK DAMAGED.

The building on Bay street, Toronto, the first floor of which is occupied by the local branch of the Canada Screw Co., was damaged by fire on February 18. The fire originated in the rear of the second storey in the warerooms of D. J. Sinclair, florist, and as a stock of light combustible material, such as wicker baskets, was stored in the apartment, the blaze had gained considerable headway before being discovered. The alarm was rung in about 5 a.m., and the blaze extinguished after an hour's fight.

The chief sufferers as a result of the blaze are the Canada Screw Co., their loss resulting from water solely. The damage to the stock has been estimated at from $5,000 to $10,000.

The ground floor was saturated with water, and the shelves containing cardboard boxes of stock were broken open by the water, and as the goods rust quickly, the result is two large stock rooms filled with damaged screws and nails. The head office of the company is at Hamilton and the officers are, President, Cyrus A. Birge; general manager, F. H. Whitten. Chas. G. Knott is the manager of the Toronto branch.

The firemen spread tarpaulins over the stock wherever possible, but in the opinion of Mr. Knott most of the goods will be damaged. Little is known in Toronto regarding the insurance of the stock, as the risks were taken out in Hamilton.

U. S. IRON AND METAL TRADES

Cleveland, O., Feb. 20.—The Iron Trade Review to-day says:

Sales of structural material by the principal producer this week amount to about 16,000 tons, and other interests sold fair tonnages. Fabricating concerns are naming low prices. Orders for cast iron pipe in eastern territory amount to considerable tonnage. Sales of standard rails have been very small, but there is a fair demand for light rails, of which 1,500 tons were sold in the Pittsburg district and 1,000 tons in the Cleveland district. Specifications on steel bar contracts have improved, and there is little activity in bar iron. There is an increased demand for plain and barbed wire and wire fencing from rural districts. At Pittsburg the rolling schedules of plate mills have been increased.

An encouraging and rather unexpected development has been the increasing firmness in prices of old material. There is increased demand for scrap for use in basic open hearth steel furnaces, and railroad offerings of heavy melting scrap have been disposed of at good prices.

The most cheerful news this week comes from across the Atlantic. Our Birmingham, England, correspondent reports an increased demand for pig iron, and the placing of large orders for some finished products. In the United States there has been little change in conditions.

CHANGES IN AUSTRALIAN TARIFF

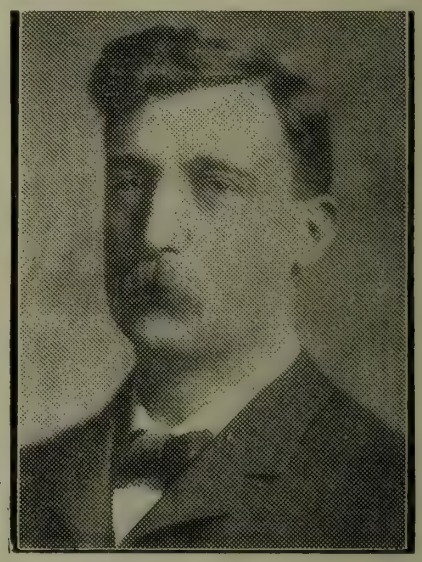
The Canadian Trade Commissioner in Australia, J. S. Larke, in a recent report, states that the new Australian tariff will be on the average five per cent. higher than the old, but on no one line will it be so high as to be practically prohibitive. On most lines the effect of the preference granted to Great Britain is of more value than the additions to the tariff. If Canada secures the advantage of this preference, its position will be materially improved over that which it occupied under the old tariff on many lines of goods which Australia must continue to import. The greatest impediment to Canadian trade in Australia will be hereafter, as it has been in past years, the inability of Canadian manufacturers to fill the orders that they might otherwise obtain.

TAKE YOUR CASH DISCOUNTS.

The small margin of profit on many classes of goods means an actual loss in the final result, after freight, handling and selling costs have been deducted from the supposed profits, to say nothing of incidental expense, bad accounts and interest on the capital invested. A two per cent. deterioration of the entire hardware stock is no more to be avoided than a two per cent. cash discount on goods bought is to be taken advantage of. Imagine what this means when money can be turned over several times during the year and by anticipating your bills in advance of the time they are due you could be two per cent. ahead on each and every time a dollar was turned over!

Many of our large department stores are actually selling their wares at bare cost (which of course includes all items of freight, handling and incidental expense), and on account of their large volume of business which allows them to replenish their stock several times per year, declare a substantial dividend from the simple fact that they discount their bills with their creditors. One dollar spent three times per year and every time at a discount of two per cent. means six per cent. per year.

Manufacturers and jobbers who allow cash discounts do so to encourage prompt payments that they may thus be enabled to turn their money over quicker.



Take advantage of your discounts in every possible case.

The employer always has a warm spot in his heart for the man who does a square day's work.

A. E. HAMILTON.

JAMES STOTT.

Of Hamilton & Stott, Master Plumbers, St. Thomas, Ont.

Novel Advertising Done by Plumbers

How a St. Thomas Firm Got the People Guessing the Week Before Christmas —One of the Partners Narrowly Escapes Election As Alderman.

Novelty advertising is not supposed generally to be within the province of the plumber, but, in St. Thomas, Ont., there is a firm that prefers to be the exception to the rule and every little while they give a real surprise to the citizens. It may not be exactly a motto but it's apparently a guiding rule for the firm "that it's a pretty recent arrival to St. Thomas who doesn't know of Hamilton & Stott."

Hamilton & Stott supplement their newspaper advertising with publicity-getters that the other fellows don't think of. They haven't yet offered a free bath to anyone who would test their bathroom fixtures—but it wouldn't surprise anyone if they did.

galvanized iron around the outside. The windows of the doors were also curtained. A placard was put up announcing that on Christmas eve a turkey would be given to the person guessing nearest to what farm yard live stock the window would contain at eight o'clock that night. The announcement was also made through the newspapers.

A half-hour before the hour named the street in front of Hamilton & Stott's was crowded. The guessing closed at eight o'clock and then a couple of pigs, a pair of rabbits, a couple of hens, a turkey, a duck, a pigeon and a pheasant were put in the window. Two newspaper men did the judging and the guesses they went

ran for alderman in the recent municipal contest in St. Thomas and though he wasn't elected he proved his popularity by a large vote. Next year, his friends say, " 't'will be a lead-pipe cinch."

The firm commenced business in 1900, both being practical mechanics, Mr. Stott looking after the heating and plumbing department and Mr. Hamilton the sheet metal work and furnace department. Their business gradually growing forced them to seek larger quarters, where they are now at—445 Talbot St., and employing ten employes. They carry a large stock of iron pipe and pipe fittings, and a complete line of plumbing goods, gas fixtures, gas globes, mantles, etc. Some of the heating jobs the firm has installed are: The Mrytle St. School, heated by the low pressure steam, the Separate School, heated by low pressure steam, the Free Library and the Home Bank, heated by hot water.

Novel Window Display that had the People of St. Thomas Guessing.

The nearest they ever got to "ducking" in the window was the week before Christmas when they filled one window with a big tin basin and put live fowls into it—ducks. This in itself was enough to attract the attention of passers-by but their enterprise didn't stop there—they put something else into the other window. And just because nobody know what that "something else" was, everybody wanted to know—and that meant everybody was talking of Hamilton & Stott's.

This was the way the scheme worked. First one window was completely closed to the public view by nailing up of

through were most amusing. Some guessed everything in a farm yard from an owl to a bull. One guesser even included a local donkey, while another wishing not to slight any live creature added fleas to his list.

When the judging was concluded it was found that a 14-year-old newsboy had defeated a well-known lawyer in a close race besides scores of others who were farther behind. The novelty was the talk of the town but everybody said "that it was just like Hamilton and Stott."

Bert Hamilton, one of the partners,

TREATY ACCEPTED IN FRANCE.

The bill approving the convention between France and Canada was adopted in the Chamber of Deputies a fortnight ago by a very large majority. M. Lefas showed that Canada by concluding with France a convention for ten years had followed a far-sighted policy which would protect her industry, but he considered that the French boot and shoe industry, which was of great importance, would be unfavorably affected by the new convention.

M. Klotz, speaking for the Customs Commission, said the convention safeguarded France's absolute liberty in the future. The chamber might ratify it without fear.

PUBLISHED EVERY SATURDAY.

TRAVELERS AND THE ASSOCIATION.

The Ontario Retail Hardware Association took the proper and dignified stand which does them much credit in dealing with the question of admitting commercial travelers as associate members.

When the association first started, many of the travelers took the narrow-minded view that the organization of the trade would be a serious disadvantage, and they did, for a time, a good deal of harm by advising retailers to have nothing to do with it. They, likewise, criticized Hardware and Metal for the strong support it gave the association.

The broader minded men who happily were in the majority, took the view that the getting together and gossiping of the trade throughout the country might reveal variations in prices and terms and show that in some instances all dealers were not treated alike, yet the meeting and discussions of the leading members of the trade would make them bigger and broader men, better merchants and in the long run vastly better and bigger buyers from the travelers. These men were anxious to help the association, and suggested to a number of the members that they should be admitted as associates, that they would pay fees willingly, and that these fees would be a material help to the association.

The association was unanimous in the belief that closer relations at an annual gathering and the common discussion of many questions would be of great benefit, but they hesitated about accepting fees or favors of any sort. It was urged that in the United States and in other trades in Canada it was quite a common thing for travelers to contribute towards the funds of the association, and on the occasions of the annual meetings to spend money lavishly in entertaining members. This showed a good feeling, but it has been carried to excess, and there have been many disgusting and objectionable exhibitions. It is a wrong principle and the association took the right and dignified stand that they would not be a party to or allow any such form of relationship.

The Ontario association has set an example that should be followed by the other trades in Canada and by the hardware and metal trades in the United States. The members, however, decided that one day at each annual meeting should be devoted to a joint gathering of travelers and merchants, when questions of general interest should be discussed and papers read on topics that would tend to improve business conditions. The following days would be devoted to executive work in which travelers, of course, would not be interested.

A proposal was made that hardware travelers might form their own association. The idea is a good one and it is hoped that it may be carried out.

During the discussion the members also took strong ground against the policy of some merchants in other branches of trade in asking travelers to join local clubs, societies in which they can have no possible interest—the whole thing being a species of blackmail, similar in its nature to the church, or society which asks the local retailer to contribute or put an advertisement in a programme.

THE HARDWARE CITY.

The following is an editorial which appeared in the Hamilton Herald on Tuesday, February 18:

"Very appropriately the Ontario Retail Hardware Association has decided to hold its next convention in Hamilton. It ought to be one of the most interesting and notable of next year's conventions, for the local hardware men will undertake to demonstrate to their brethren the undoubted fact that Hamilton is the chief hardware manufacturing centre of this Province, if not of the country.

This fact is already conceded by our esteemed weekly contemporary, Hardware and Metal, the organ of the Canadian hardware trade. 'Hamilton,' says our contemporary, 'with its large steel and iron industries, Westinghouse electric and Deering implement works, its big wire works, shovel plant, screw and nail industry, lantern and tinware factories, roofing, woodenware and other hardware industries, is making a big name for itself, not only in Canada, but across the border. In fact, it is said that in Pittsburg, where the Hamilton metal industries are large buyers, Hamilton is considered the largest industrial centre in Canada.'

But, for the same reason why Hamilton would be the most appropriate place of meeting for the hardware convention, it would be the most appropriate place of meeting for other trade conventions also. For be it known that there is hardly a class of manufacturing which is not represented, and well represented, in this great industrial centre. For the members of any trade convention there is much that is instructive and interesting to be seen in Hamilton factories."

A BUSINESS LETTER INNOVATION.

The progressive business man, keenly alive to the knowledge that time is money, is always ready to put into practice methods whereby his correspondence can be conducted more expeditiously and systematically. But it is doubtful whether he is quite prepared to go to the extreme lengths adopted by an Iowa concern in the style of its letters. In this instance the customary form of business letter construction has been radically altered. Not only is the name of the addressee with the address placed directly under the date, instead of at the left hand of the communication, but in a revolutionary manner, characteristic of our neighbors across the border, the time honored salutation of "Dear Sir" or "Gentlemen" is dispensed with, as well as the termination, "yours truly," or its equivalent. The reason given for this departure from formality is that the company will no longer waste time and space in conforming to a custom that has long since lost its significance, and is but a remnant of the effusive politeness common when letters were not such large factors in business as they are now. Furthermore, the name of the company and the signature of the writer is impressed at the bottom of the letter with a rubber stamp.

It must be frankly admitted that we cannot concur in the explanatory remark that the stereotyped methods of beginning and ending a letter have lost their significance, and are, in fact, unnecessarily polite. The inference is that politeness is useless in business transactions, and curtness only essential. But this, in our opinion, is a great mistake. The traveler who most readily gains the ear of a purchaser is not the

man who ignores all customary forms of opening an interview, and abruptly states his business in a peremptory manner, careless of the impression created, but the man who recognizes that a certain amount of courtesy is due from both sides, and offers politeness in the belief that it will be returned. What obtains in the case of a traveler obtains in the case of a letter, which is equally representative of the firm. In fact, in the latter instance, the courtesy of the customary salutation is more essential, for the letter is the firm speaking in its own words, and the mistake of an employe cannot be brought forward, as in the case of a traveler, as an excuse for an offensive style of address.

Business of to-day has not been divested of sentiment by any means. Personal likes and dislikes will always be a great factor to be reckoned with in trading, and we hardly see the reason of running the risk of appearing indifferent to the feelings of an addressee for the little saving of time and space that is made by the Iowa innovation. Of course the idea of the originators of this novel scheme is to educate the commercial world to the fact that there is no real act of discourtesy in the method advocated. But so long as politeness rules in one walk of life, so it will in another, and business pursuits will never prove an exception.

The method of stamping the name of the sender of the message with a rubber stamp is open to the objection that it removes that amount of personality to a letter which in many cases would prove its most effective point. Stamping the name changes a personal letter, with all its direct importance, into an ordinary circular, with a loss of much business weight. So far as changing the position of the name of the addressee and the address is concerned, the alteration is not radical enough to need much criticism. In some systems of filing letters an advantage may be gained in altering the position so that a certain communication can more easily be found, but in the case of the vertical system so generally in use, there is no benefit to be derived from the change.

WILL APPOINT TARIFF EXPERT

The Canadian Manufacturer's Association have decided to appoint a tariff expert at a large salary. His duty will be to represent the association in all negotiations with the Government, and to make a thorough study of tariff and tariff conditions throughout the world.

The man most favored for the position is John Bain, formerly assistant Commissioner of Customs. It is very doubtful, however, if they can get him, as he is now in the employ of the Hon. Clifford Sifton at a fancy salary.

THE CO-OPERATIVE BILL.

The particularly objectionable feature of the co-operative legislation as proposed for enactment by the Dominion Parliament is the facility with which members of the societies may escape responsibility, financial or otherwise for the acts of the society. Should, for any reason, any number of members wish to withdraw all they have to do is to resign, and the moment their resignations are accepted their liability for debts contracted by the society ends. What assurance have firms who sell to co-operative societies that those comprising it will not "resign" and disclaim any responsibility for debts contracted? This feature in itself should be objectionable enough to defeat the proposal.

THE SITUATION IN THE WEST

By our Special Winnipeg Correspondent.

The situation in the West has developed many features of interest during the past two weeks but the question of the amendments to the Grain Exchange charter continues to be paramount in grain circles at least. The gravity of the situation has increased rather than diminished. The agricultural committee have passed the bill in its most confiscatory form and have recommended it to the legislature in that form in spite of the representations made by counsel for the Grain Exchange. The Grain Exchange has filed a formal protest to the legislature against the passing of the bill, but it is not expected that this will have any effect in deterring the passage, which has apparently been determined upon by the Premier, Hon. R. P. Roblin.

* * *

To what extent the well ordered and well established grain markets will be disturbed and destroyed it is too early to determine, but, although there are differences of opinion on some passages of the bill and their effect, there seems to be but one opinion, outside of the Provincial Minister, pledged to it, and the little coterie of grain growers that have fathered the bill, and that is that it is unquestionably the most vicious piece of legislation that has ever been brought before a Canadian Parliament, and so far from accomplishing the end desired by its authors will have the effect of upsetting the entire grain trade, both domestic and export, possibly for years to come.

* * *

The wheat market has in common with world markets, suffered a very serious slump in the past ten days, but now shows signs of recovery and a return to normal conditions. It is worthy of note that the Winnipeg market was the slowest to break and has been the first to show recovery to any material extent. The receipts of wheat for inspection have been growing smaller daily for some time, and the receipts at country elevators still smaller, indeed the amount now in farmers' hands must be small indeed, and apart from any good wheat that may have been reserved for seed, is generally of low grade. When the slump reached good proportions there was a considerable revival of export trade, which has been very dull since the heavy Argentine shipments have begun to come in. The inquiry was for No. 1 and 2 Northern or else for low grades. The usual mid-winter dullness which is always a feature of the early part of February, is passing and generally more active conditions are looked for as the season advances. In spite of the heavy weekly all-rail shipments, stocks are accumulating at the lake fronts, very much in excess of any previous year. Of course, during the entire season, there has never been a week when it has not been easy to carry wheat from interior points to the lakes, owing to the very open season.

* * *

The distribution of seed grain is being watched with keen interest by business men as well as farmers, for on the early seeding of a large area with good seed depends largely whether the year 1907 was as disastrous to mercantile interests as was at first anticipated. There is no question, that although conditions have not proved as bad as many anticipated, a backward spring with slow seeding and a scarcity of seed calculated to produce a vigorous crop would be very prejudicial and would precipitate many failures that are now being staved off. Recently there have been quite a number of rather material failures in Winnipeg though none of a character to occasion any very widespread loss. The tightening of things has been noticed, most especially in furniture lines, and one very large concern that did a heavy credit business in these lines has gone under and a receiver has been appointed. The period of rapid expansion through which the city has been passing, the very high rents, and the consequent renting of larger houses and putting in of new furniture and renting rooms that has been carried on to a surprising deegree, has been very largely done on the instalment plan. Many of the people with roomers are finding their rooms vacated or have been obliged to accept very much lower rents and in turn have not been able to keep up payments on furniture, so that this in a measure accounts for this branch of trade feeling the squeeze severely. Grocers, especially wholesale grocers, and dealers in heavy and necessary clothing, report conditions better than they expected to find them when the winter season opened. They claim that the fact that people have had to spend so much less on fuel than usual has left more money to invest in food and clothing, whatever the reason the fact remains that accounts of this character have been very well met.

Markets and Correspondence

(For detailed prices see Current Market Quotations, page 66.)

MARKETS IN BRIEF.

Montreal.

Copper—Weak at 14¾.
Tin—Remains at 32½c.
Spelter—Continues strong.
Lead—Weakening.
Pig Iron—Maintains firmness.

Toronto.

Iron Pipe—Prices reduced.
Stove Bolts—Discounts increased.
Copper—Quoted at 14 cents.
Ingot Tin—Continues at 31 cents.
Tinned Sheets—Down ½-cent.
Pig Lead—Decline.
Spelter—Holding firm.

MONTREAL HARDWARE MARKETS

Montreal, Feb. 21.—Owing to the improvement in the weather, trade has brightened up considerably this week. Travelers are losing no time in making up the delay caused by the snow blockades, and the country roads are now more passable. This, combined with the gradual approach of March, when orders will take rush proportions, induces a growing briskness to business generally. Freight likewise is moving more freely, although some shipments are still held up.

Orders from the West continue backward, but the East is showing good promise of assuming normal trade proportions before long. Collections are on the mend, and taking all things into consideration trade conditions are satisfactory. Kitchen utensils and spring cleaning goods are now moving more freely. Egg crates are in strong demand, and it is evident that a good egg season is anticipated. Prices are steady.

Builders' Hardware and Supplies—Orders for future delivery are improving for the various lines, but the quantities are not heavy. Some very effective and practical designs in lock sets by Canadian makers have been put upon the market, and show promise of moving well. Increasing attention is being paid by builders as to style and workmanship in these articles, and the builders' branch of the hardware industry is growing to be an important one. Prices are unchanged.

Railroad Supplies—The demand continues about the same in volume as that of last week. There has been a cessation of construction work lately, and gangs have been reduced. This has adversely influenced the lines moving for immediate delivery, but the prospects are still as good as ever they were. Hammers and shovels are selling, perhaps, the best of all lines.

Lumbermen's Supplies—Boot calks have showed up well this week for immediate delivery. It is evident that there has been a considerable amount of holding off by buyers this season. For future delivery cant hooks and chains are moving well. The demand generally is fair.

Spring Goods—House cleaning utensils, such as carpet sweepers, brooms, mops and buckets are commencing to move. Picks and sidewalk scrapers show increasing strength.

Nails—The price of nails is now quoted rigidly at $2.30. The demand is fair, but it naturally has not been encouraged by the fluctuations which have taken place in quotations. A steady basis will stimulate trade.

Sporting Goods—The lines moving at present are not many. A few orders for guns have been placed. Ammunition is moving better, while sorting orders for shot are fair. Prices are unchanged.

Bolts and Nuts—The demand is improving all the way round, and prospects are encouraging. Manufacturers' stocks are now well assorted, and there seems little fear, as indications show at present, of any shortage being experienced similar to that of last year.

Screws—Screws are still somewhat inactive. Orders for future delivery are coming in slowly, but there will be no strength to the demand until next month. Quotations are unchanged.

TORONTO HARDWARE MARKETS.

Toronto, Feb. 21.—Conditions for the resumption of an average hardware demand are more favorable this week than for some time.

Orders coming in during the week have easily surpassed those of any other week since the new year. The orders being booked are in most cases equal to those booked at the same time last year and on the whole business in Ontario is rapidly gaining a highly satisfactory basis.

From British Columbia reports proved by large orders are coming to hand in increasing numbers and though the middle west is a little behind as yet prospects continue to brighten and when spring opens up business in the provinces lying between British Columbia and Ontario will undoubtedly revive in every case. With the increasing possibilities, which seem to indicate a satisfactory year for the trade dealers should not delay placing order goods for spring delivery.

During the week prices on most lines have remained firm. Iron pipe has been reduced to an appreciable extent and a further reduction in the price of stove bolts has been made.

Iron Pipe—For some time a reduction in iron pipe has been predicted by those in a position to know. Producers have held the prices firm for some time but the present reduction had to come. Stocks are fairly heavy at present and the demand is light at this season. The revised price list will be found under current quotations.

Bolts and Nuts—The demand for these goods is also reviving and on all varieties, with the exception of stove bolts prices are being maintained. An additional discount of ten per cent. has been announced on these goods, quotations now being 75 and 10 per cent.

Nails—Price cutting on nails has come to an end, it is predicted, and the agreement reached by the large manufacturers will probably hold for some time. The demand is steady and increasing. We quote 100 lb. kegs at $2.30 base, f.o.b. Hamilton, London, Toronto, Brantford and Collingwood.

Rope and Binder Twine — The weakness in the hemp market continues, but it has not led to any further reduction in prices. The demand is steady and quotations remain firm.

Screws—There is a small demand for common sizes at present, and stocks are fairly large. Some large orders for future delivery are being received and prices remain unchanged. We still quote 85 and 10 on flat and 80 per cent. on round styles.

Spring Goods—Booking for all varieties of spring goods, garden tools, hose, poultry netting, wire fencing, lawn mowers and builders' hardware, is well under way. Prices remain firm and orders coming in are encouraging.

Builders' Hardware and Supplies—Prospects are favorable. Much building is contemplated throughout the country for this year and as a result a good demand is expected. High class goods are being universally adapted by the mechanics and as a result buyers are far more satisfied with their goods than in the past.

MONTREAL METAL MARKETS.

Montreal, Feb. 21.—Copper is once more the weak spot in the metal markets, and its generally depressed tone is having an adverse influence upon conditions all the way round. Tin in the Old Country dropped a little, but the metal closed firm, so that this market is not to blame for the weakness in the present situation. Although the demand locally is maintaining strength, inquiries by American consumers are disappointing, especially in copper. The continued decline in foreign prices, and the falling off in exports—there being little or no European demand just at present—make it imperative, if a firm figure is to be maintained, that the domestic consumption should rally. This is not taking place, and consequently copper is gradually weakening. A strengthening tone in the Old Country would stiffen the situation, but until the accumulation of stocks is cleared off, this is not likely to happen.

Spelter is the only metal that can be said to be gaining ground with a firmness that promises to be maintained. Much is expected of the European syndicate which is to control the foreign

markets. Whether this combination will produce a strong speculative movement which in the end will prove more of evil than good remains to be seen. For the present merchants are satisfied with the position. Lead is weaker, but pig iron stronger.

The situation generally is not so good as it was last week. Business has received a check, so far as outside markets are concerned. That there is a demand waiting to be launched on the markets, no one denies. The only question is, how long can users maintain this holding back disposition? Until trade conditions force buying, there will be little real firmness to the markets.

Pig Iron—Locally the market is showing improvement. Stocks are moving well, and it is evident that users, by putting off their buying until the last minute in the hopes of price-cutting, have been forced to buy from stock instead of from the mills, with a consequent loss to themselves. Deliveries from the mills are improving, the time taken being much less than it was some months ago. The United States markets continue uncertain. While the larger interests continue to make strong efforts to maintain prices, many of the smaller Southern furnaces are selling at a material reduction on published figures. In the Old Country the market has strengthened a litte, and Cleveland warrants are now quoted at 48 shillings and ninepence, an advance of twopence over last week. Stocks are light, and the demand is improving. Altogether pig iron maintains its strong position, and prospects are favorable. We quote: Middlesboro No. 1, $21.50; exstore, with a shading for large quantities for import; No. 3, $20.50; Summerlee, $25.50.

Tin—This metal dropped slightly in the English market, but not enough to indicate any weakness. Quotations are now £127 10s. here, and in New York $29.75. The advance in the latter price is explained by the great spot scarcity that exists. Conditions will probably improve during the next week. Although speculative interests control the primary markets at present, there are indications that a general shortage of tin may occur in the future. Some of the Far Eastern mines have been worked out, and during the low prices of tin many producers stopped operations, or reduced their labor force. The result of this will be that the output from the Federated Malay States will be a diminishing one. When one considers the important part that this tin mining centre has played in the world's production, it is evident that a decreasing output will have a serious effect upon the future tin situation. We still quote tin at the advance of last week, 32½c.

Copper—Copper continues to weaken in New York, and in the Old Country, and the markets are in a very depressed state. The mainstay of copper has been the foreign demand, but this has fallen off and has left the market very weak. Consumers' orders and inquiries have been less this week than last, and the general situation is bad. Stocks must be heavy in Europe, which probably accounts for the slump in the English quotations. Prices across the Atlantic are now £57 12s. 6d., a decline of £1 15s. over last week. The only hope of the market generally, is a revival in the domestic demand. The estimated production in the States for January was 2,000,000 pounds in excess of December, but this was 18,000,000 pounds behind January of last year. If this relative restriction is maintained for some time there may be a chance for a strong recovery, providing, of course, that the consumptive demand increases to the extent that trade conditions should demand. With copper ranging around 12¾c in New York, the price locally cannot be maintained, and we now quote 14¾c with a further shading for large lots.

Spelter—Spelter maintains its strong position and has advanced £1 2s. 6d. in the English market, the price quoted now being £21 15s. Quotations at East St. Louis maintain strength at last week's advanced price of $4.80. The speculative movement abroad still continues, but the market is strong as the price ruling is still too low for profitable trading. We continue to quote 5½ for foreign and 5¼ for domestic.

Lead—Lead is still falling, and the price now quoted is £14 2s. 6d. The market is dull, and unless conditions improve there will be a shading of prices locally. At present we continue to quote $4.50 for imported pig.

Antimony—Antimony is strengthening in the foreign markets, but there is no change locally. Conditions are dull, and there is very little doing.

Old Materials—The market is dead. Prices are unchanged as follows: Heavy copper and wire, 11½c; light copper, 10c; heavy red brass, 11c; heavy lead, 2¾c; wrought iron, $12; No. 1 cast $13; No. 2 cast, $10.

TORONTO METAL MARKET.

Toronto, Feb. 21.—Dullness continues in metals owing to the irregularity in price quotations, copper particularly being chaotic. Locally, 14 cents is being freely quoted with the market anything but strong. The effort to force an advance in refined copper by sheer trust strength has met with flat failure. Increasing output, notwithstanding the curtailment by trust interests, the light melting both in America and abroad, and the continued increase of stocks has been too strong a combination of forces to be combated successfully even by the copper trust, supported by relatively easy money for financing surplus supplies both here and abroad. The result has been that independent producers, as well as second hands, have forced sales recently, bringing about a break of ½c a pound in New York prices, and between £2 and £3 in the European market.

Metal merchants are chiefly busy at present in looking after collections, the bookkeepers having far more work than the shippers or salesmen. Foundries, wire fencing manufacturers and others who have shipped large quantities of metal products to the Northwest, have found collections slow and their condition is naturally reflected upon the jobbers who supply their raw material. Such sales as are being made at present are small and for present consumption, buyers generally declining to book ahead under existing conditions, and sellers not being more desirous of holding up the market than to sell goods.

Pig Iron—Buyers continue to hold off and sellers are waiting for something to happen. Furnaces in Canada are curtailing production while still keeping their fires burning. We still quote $22.50 for Canadian foundry iron, and $21 for No. 3 Middlesboro.

Copper—Prices have dropped half a cent, following a break in the foreign markets. Sheets are also lower. For casting ingots we quote 14 cents.

Tin—The strength of the market for tin at London and the Straits in the face of the unfavorable statistics is attributed to the fact that the United States Steel Corporation became a buying factor in those markets early in the month. It is predicted that as soon as the Steel Corporation buying ceases the market will drop. At present tin is firm at 31 cents in Toronto.

Lead—A weaker market prevails with $4.15 quoted locally for imported pig. Buying is very light and a further shading seems likely.

Spelter—This metal stands alone this week in firmness. Both in America and Europe the market is strong and advancing, with the metal somewhat subject to speculation. We quote from 5 to 5¼ cents.

Antimony—Supplies are heavy and demand light. We quote 10½c per lb.

Old Materials—The scrap market continues dull and heavy, with lead prices decidedly weak.

LONDON, ENG., METAL MARKETS.

London, Feb. 18.—Cleveland warrants are quoted at 48s 7½d, making prices as compared with last week 3d higher.

Tin—Spot tin opened easy at £127 5s, futures at £126 5s, and after sales of 270 tons of spot and 450 tons of futures closed weak at £126 10s for spot and £125 10s for futures, making price compared with last week £3 lower on spot and £3 15s lower on futures.

Copper—Spot copper opened weak at £57 2s 6d, futures at £57 7s 6d, and after sales of 600 tons of spot and 1,500 tons of futures, closed weak at £57 for spot and £57 5s for futures, making price as compared with last week £2 10s lower on spot and £2 12s 6d lower on futures.

Lead—The lead market closed at £14 1s 3d, making price as compared with last week 6s 3d lower.

Spelter—The spelter market closed at £21 10s, making price as compared with last week 18s higher.

Don't get discouraged. A discouraged salesman is on the toboggan for the down and out club.

Quebec and Maritime Provinces

A $2.35 Base on Wire Nails at Halifax—Mining News From Newcastle.

HALIFAX.

Halifax, Feb. 17.—The feature of the hardware business last week was a decrease in the price of wire nails. The drop was very unexpected and all the jobbers were completely taken by surprise, when they received notice at the close of the week that the price had been cut fifteen cents. They were quoted at $2.50 base, but the present market price is $2.35 base. This rapid change has upset the calculations of the jobbers, who had quoted nails at $2.50 and were filling their spring orders at these prices. As the result of the change they will now have to allow their customers a rebate to make up the difference and it will mean quite a loss. The cause of this sudden change is difficult to solve. The cut was made by the St. John nail manufacturers and it is presumed for the purpose of holding the Maritime markets against the Montreal manufacturers. Two weeks ago the latter were quoting nails here at $2.50 base, but it is stated that since then no quotations have been received from these parties. Trade at the present time is a little quiet, but nothing out of the ordinary for the season of the year, and it is expected to brighten as soon as the spring opens.

* * *

Samuel Atwood Crowell, one of Yarmouth's foremost business men, and whose name has been identified with the hardware trade of that town for many years, died at his home at Milton last week, of apoplexy, aged sixty-five years. He first engaged in business for himself, then entered into a partnership with William Cann, under the firm name of Crowell & Cann, conducting a general business. At the dissolution of his firm he went into the hardware business with Samuel Killam, under the firm name of Killam & Crowell. In 1876, on the retirement of Mr. Killam, Mr. Crowell purchased his partner's interest and conducted the business up to his death under the name of S. A. Crowell & Co. Mr. Crowell was for some years a director and afterwards vice-president of the Bank of Yarmouth, a director of the Yarmouth Steamship Company, the Yarmouth Duck and Yarn Company, the new Burrell-Johnson Iron Co., the Yarmouth Gas Co. and the Grand Hotel. His business career was successful throughout. He is survived by his widow and three sons.

* * *

The re-organization of one of the best known manufacturing concerns in Truro on a solid basis, has been accomplished, and this old firm of manufacturers will hereafter be known as the Truro Foundry and Machine Company, Limited. The authorized capital is $100,000. Less than $50,000 of this stock will be issued, and the balance will be retained as treasury stock for future development. The property on Young Street, Truro, and the good will of the business has passed over to the new company. $20,000 of the stock will be offered for public subscription and the proceeds of this sale are to be used in improving the present plant, especially the machine shops, which will place the foundry in a position to do any work of the iron monger that there may be a demand for in the Maritime Provinces. The firm will make a specialty of gold mining and mill machines. The provisional directors are: Frank Stanfield, C. E. Crowe and W. J. Kent. The officials are: Superintendent, Duncan MacDonald; foreman of pattern department, John Patton; foreman of molding shop, Angus McDonald; foreman of boiler shop, Daniel McCarthy; foreman of stove and furnace department, Wilfred Roebuck; mechanical draughtsman, Geo. J. Mosher.

NEWCASTLE.

Newcastle, N.B., Feb. 12.—In a few weeks the Dalhousie Lumber Company will begin the erection of a large new saw and rossing mill there. It will be 135 by 75 feet and furnished with all modern machinery, at a cost of about $100,000. It will employ 175 men. A new shingle mill will be built at the upper end of the town. The total output of the company will be about 25,000,000, and 1,000 men will be employed in the woods, and some 200 in town. Their output of shingles will be from 40 to 50 millions. The directors of the company for the ensuing year are: James Manchester, of St. John; W. T. Whitehead, ex-M.P.P., Fredericton, and Henry Hilyard, Mr. Griffin and Mr. Underwood, of New York.

* * *

It looks as if the Drummond Company, who have acquired the Nepisiquit iron mines, will build their smelter at, and ship from the port of Bathurst. The harbor will be dredged the coming season. Bathurst has some 2,000 people already, and if, as is highly probable, the iron works go there, instead of to Newcastle, it will soon be a city.

Important Meeting of Hamilton Stove Manufacturers and Molders—Changes in the Trade at Goderich—Winter Fair Buildings at Guelph to Cost $35,000—Ingersoll Board of Trade Reorganized—Bright Views Taken By London Manufacturers.

KINGSTON.

Kingston, Feb. 18.—The Kingston Shipping Company, recently incorporated, is having a steamer built at Dumbarton, Scotland, the vessel to be named the "Cataraqui." Her general dimensions will be: Length, over all, 256 feet; beam, 43 feet; depth molded, 22 feet. The officers of the company are: President, H. A. Calvin; vice-president, H. W. Richardson; secretary-treasurer, S. C. Calvin, all of this city.

* * *

The Angrove Foundry, of Kingston, has received the contract for the castings for fifty box cars for the Rathbun Company, of Deseronto, who have secured the contract to supply the above number of cars for the Intercolonial Railway. This makes 250 box cars that the Rathbun Company have been called upon to supply for the I.C.R. Co.

* * *

One of the front plate glass windows in John Corbett's hardware store had a narrow shave from being smashed to atoms on Monday afternoon, when a delivery horse attached to a sleigh ran away down Princess street, colliding with the corner of the building and smashing the sleigh, luckily, no damage was done to Mr. Corbett's store.

* * *

Trade in general has brightened up considerably the past week. The farmers are again able to reach the city and are coming to the city each market day in goodly numbers, owing to the severe storms we had recently a great many of them were snow-bound for some time and unable to reach the city, which interfered greatly with the country trade. This, together with the fine weather at present and the approach of spring, has marked a great improvement in business generally. The chief amount of trade done during the past month was in sporting goods, such as skates, hockey sticks and snowshoes, There was also quite a demand for snow shovels for a time. The merchants are, however, expecting a much brighter outlook in the near future, as things have been very quiet now for some time.

HAMILTON.

Hamilton, Feb. 19.—The stove manufacturers here are endeavoring to have the molders consent to a reduction in their wages. They contend that the rate of wages among this class of workmen here is much higher than in other cities which puts them at a disadvantage with the manufacturers in those places. A conference was held a few days ago between representatives of the union and the manufacturers, and a formal request made that they consent to reduction of wages and a return to the figures of 1904, which are about 17 per cent. lower. The molders are considering the proposition, and will give a definite answer near the end of the

week. Orders are commencing to come in now, but they are mostly for lines of stoves which the manufacturers claim at the present rate of wages there is little profit on. As many of the molders are without work, the stove manufacturers consider that it would be better for them to agree to work at a reduction than to be idle.

* * *

In conversation with your correspondent, a member of one of the leading stove manufacturing firms said with reference to the above matter: "The wages paid in 1907, as compared with 1904, represents an actual increase of 20 per cent., including the increases granted the molders, mounters, polishers, etc., while the actual increase in the selling price of stoves varies from 1 to 8½ per cent., according to the revised price lists and catalogues. It is evident that stove prices based on manufacturers' cost, are far too low, and this is undoubtedly responsible for some stove makers going into liquidation. It is also evident that either a reduction has to be made in the price of labor or stoves will necessarily have to be advanced. Continuing, the person in question referred to the number of small stove manufacturers who had gone to the wall within a very short space of time, and said that this was mostly attributable to the fact that they had been trying to keep down prices while their pay lists were increasing. There was no doubt that the financial depression in the United States had a very serious influence on the conditions, but while the manufacturers were being hard hit for payments the farmers and a few other classes who were not being affected by the pinch were taking advantage of the situation to get out of paying their debts.

It is thought that the result of the negotiations for a reduction in the wages of the molders will materially effect conditions of a like nature in every city of importance in the country. It is thought that the union men will see the fairness of the proposition, in so much that when times were good they got good wages, and that when conditions have been reversed they should not expect the manufacturer to treat them the same. If such is the case it is a foregone conclusion that the unions in a spirit of fairness will undertake to submit to a decrease in the wages in other cities, and, therefore, cause a change all along the line. The result of the negotiations will doubtless be watched with interest by the trade all over the country, but it is not expected that there will be anything definite in the matter before next week.

* * *

There has been a slight picking up in the retail hardware trade during the past week. A period of mild, refreshing weather has prevailed, with the result that the constant fluctuation in business at this time of year has temporarily, at least, resulted for the better. One hardware dealer in discussing the financial and labor situation laid the blame for the conditions at the doors of the banking institutions of the country, which send their money across the line instead of keeping it here to develop home industries.

* * *

The D. Moore Stove Company has made a change in its traveling staff whereby J. L. McMartin will represent the firm in Western Ontario, which was formerly covered by A. Denny. Mr. McMartin is well and favorably known to the hardware trade, and the company feels that its interests will receive careful attention at his hands.

* * *

Stanley Mills, manager of the Stanley Mills hardware store, left this week with Mrs. Mills for a vacation in Florida.

* * *

The annual meeting of the Dominion Power & Transmission Company was held on Monday. The president, Col. Gibson, referred to the success of the company, the radial railway enterprises, and, in particular, the erection of the terminal station. He said it would likely cost about $2,000,000 to tunnel into Toronto, one of the schemes in contemplation. The net profits for the year were $3,000,000. All of last year's officers were re-elected.

* * *

The Moresby Island Lumber Company, owning large limits on two of the large islands of the Queen Charlotte group, will be perhaps the first to erect a large sawmill in the north. This week the party of directors of the company, who were up to have a look at the property, returned, and it was announced that construction was to begin on a $400,000 sawmill on Moresby Island, to be completed by next fall. Members of the company also hold options on coal and oil lands, so that if the article proves to be in the ground there will be something doing. Some of the most prominent of the party were, President Earling, of the Chicago, Milwaukee & St. Paul; Stanley Field and Potter Palmer, of Chicago; A. Uhrland, vice-president of the Central Trust Company of Illinois; H. R. Williams, president of the Washington State section of the Chicago, Milwaukee & St. Paul; H. H. Field, attorney, Seattle; J. Q. Adams, capitalist, Chicago; S. C. Slosson and F. A. Blackwell, capitalists, Spokane; Thos. D. Merrill, lumberman, Duluth; R. D. Miller, banker, Spokane; Senator Hobson, of Montana; J. E. Corlett, Decatur, Ill., and T. S. Ives, of La Crosse, Wis., president of the Moresby Island Lumber Company.

* * *

At Grand Forks, in the Boundary district, there are also extensive operations proposed; eastern companies to erect mills. The Kettle Valley railway will be continued to provide the transportation necessary for the success of the enterprises.

* * *

In the lead mining districts of British Columbia, prospects are very encouraging, in view of the present activity. Around Slocan Lake, a number of properties are being worked. At Ainsworth the Maestro is shipping, and on the opposite side of the lake, the Blue Bell is employing nearly 100 men. The St. Eugene is a steady producer on a large scale, and the North Star and Sullivan are constantly in operation. At Marysville several properties are being opened up. North of this, along the upper valley of the Columbia, many propositions more or less developed are awaiting the construction of the long-promised Kootenay Central Railway.

GUELPH.

Guelph, Feb. 19.—Wm. Sunley is showing a nicely-fixed window of granite and tinware.

* * *

The installation of heating in the new armory building has been completed. The plastering and other work will now be proceeded with at once, and it is expected that it will be finished in the spring.

* * *

The local shareholders of the National Portland Cement Co. have received cheques for the annual dividend.

* * *

The plans of the provincial architect for the extension of the Winter Fair are for a building to cost at least $35,000, of which the Government will grant $25,000.

* * *

L. Walker, superintendent of the Raymond Mfg. Co., who has been at the hospital for some time, has recovered sufficiently to be removed to his home.

* * *

H. Penfold and wife were in Toronto on Friday.

* * *

The separator shop of the Raymond Mfg. Co., defeated the stone shop at hockey by six goals to one.

* * *

The tenders for the lighting and wiring of the city hall, and for the metallic ceiling for the same, have been awarded by the markets and public buildings committee. The contract for the lighting and wiring was awarded to Stevenson & Malcolm, and that for the metallic ceilings to H. Occomore & Co. The firms will commence work immediately.

* * *

The "Old Home Week" for the residents of Guelph, which will be held in August next, promises to be a big success. The local merchants expect that a large amount of trade will result from the influx of visitors. A number of former employes of local hardware stores have promised to be in the city for that week.

* * *

The bachelors won the return game of hockey from the married men of the J. B. Armstrong Mfg. Co. by a score of one to nil.

* * *

The Guelph Axle Works on Friday shipped a carload of springs to Australia. The shipment was made via G. T.R., and the car contained twenty-five tons of springs.

* * *

The factory of the Page-Hersey Iron & Tube Co. has closed down for a week or two, while some repairs are being made.

LONDON.

London, Feb. 18.—Jobbers report a distinct improvement in business since last week. Retailers are busy getting in their stocks and preparing for a brisk spring trade.

* * *

Interviews with representatives of the leading manufacturing concerns furnish strong evidence of the prevailing feeling of optimism as to the business outlook. The directors of all the industrial establishments seen had but one story to tell, and that one optimistic. At McClary's it was learned that the feeling throughout the country is decidedly hopeful. Trade is picking up and orders are coming in briskly. As yet collections are somewhat slow, but by spring we will forget there has been such a thing as financial depression. Geo. White & Sons admit that the depression hit their customers, but things are shaping for spring better than expected. The outlook is considered hopeful. Ald. Geo. W. Armstrong, of the London Brass Works, says that although that concern has been practically closed down for two months, it is now running at full blast. Orders are coming in rapidly, collections are good and trade looks better than it has for three months back. A representative of the International Harvester Company said: "We have yet to meet any great evidence of depression so far as our company is concerned. Collections have kept up, and the farmers throughout Western Ontario, our special territory, apparently are not troubled about money matters. Business is as good to-day as it was a year ago, and we have good cause for optimism."

* * *

At a meeting of the Manufacturers' Committee a communication was read from a firm being organized in Canada to manufacture glass. The management wants to know what inducements London is prepared to offer the concern to locate here. The firm expects to have a pay roll of $1,175 weekly. The City Clerk was instructed to write the firm and report at next meeting. It was decided to grant the National Light Company free water for a period of two years.

* * *

It is understood that the Grand Trunk intend to extend their yard still further east in the spring, to meet the growing demands of business.

* * *

The belief is growing that London offers a splendid field of operation for a firm desirous of engaging in the manufacture of structural iron and steel. The general impression, locally, is that the work on the big Smallman & Ingram building is being done by an American concern, whereas the fact is that the contract was let to a St. Thomas firm, who saw the opportunity and believed they were equal to the job, as they are proving. Said a well-known local contractor. "It is altogether likely that in most buildings of importance to be erected here in future steel will take an important part, and the man who has the facilities will be the man who will be successful in competition with American firms. Mark my words, a structural steel factory has got to come, for the opening is here."

CHATHAM.

Chatham, Feb. 18.—The retail hardware trade is rather quiet just now, though not more so than had been generally anticipated. Work is keeping up very well, tinsmiths and plumbers being quite busy. Prospects are very good for the coming season, however, and the future looks bright.

* * *

An important change has taken place in the management of the C. W. & L. E. electric railway, in the appointment of D. A. Gordon, M.P. for Wallaceburg, to the post of general manager, rendered vacant by the resignation of Geo. J. Fielder. The change goes into effect on March 1, and it is understood that Mr. Gordon, though a busy man, will give the office his personal attention. Mr. Gordon is manager of the Wallaceburg Sugar Company and one of the big men of Western Ontario.

* * *

The city assessors state that they expect to place an increase of $100,000 on the city's assessment rolls this year, judging by the increases in the wards already assessed.

* * *

The firm of Lendon Bros., hardware merchants, of Leamington, has been dissolved by mutual consent, Mr. Chas. Lendon retiring. The business will be continued at the present stand by Mr. Harry Lendon.

* * *

The Wallaceburg Brass Factory, which recently shut down for a short time, has resumed operations.

* * *

J. E. Guild, the Highgate hardwareman, is having a metallic ceiling and walls installed in the second part of his store, John Murray having the contract for the work.

* * *

G. D. Dobbyn has sold his Foster St. property in Wheatley to Enoch Watson and intends, it is understood, purchasing a new hardware stock and returning to active business life.

* * *

W. S. Marshall and Frank Mount, of the Canadian Gas Power and Launches Co., Limited, of this city, were in Toronto on business last week.

* * *

W. C. Crawford's Big Store at Tilbury has inaugurated a strenuous campaign for business, covering the month of February. The campaign takes the form of a prize contest sale and will continue till Feb. 29, the prizes ranging from a grand piano downward. Each cash purchaser spending $1 at the store receives a numbered coupon. Duplicate coupons are kept, and the holders of the lucky numbers drawn from these at the end of the sale receive the prizes. Customers who have accounts but settle them before the end of the contest are entitled to one coupon for every three dollars paid. The contest is being liberally advertised in the local papers within range of Tilbury. The circular literature sent out contains a comprehensive list of articles which can be purchased for $1 which should prove an aid in securing business.

* * *

The hardware firm of Drew & McCallum, of Chatham, which has been in existence for some years past, has been dissolved by mutual consent. The business will be continued by Mr. A. McCallum at the present stand. Mr. W. P. Drew has not as yet announced his intentions for the future.

INGERSOLL.

Ingersoll, Feb. 17.—More than the usual building activity is looked for this spring. Last fall preparations were commenced for a number of new buildings, among them some fine dwellings, and the hardwaremen and the plumbers are looking forward to a brisk spring trade. Despite the severity of the weather during the past couple of weeks, there was no serious interruption of business. The plumbers in particular were busily engaged attending to frozen pipes, while in hardware lines there was a keen demand for all seasonable articles.

* * *

At the re-organization meeting of the Ingersoll Board of Trade, J. A. Coulter, president and manager of the John Morrow Screw, Limited, was elected first vice-president. Mr. Coulter has lent very valuable assistance during the past few years in connection with the upbuilding of the town, and being connected with two of Ingersoll's leading industries, he is truly a man of influence. The feeling is widespread that much important work can be accomplished by the Board of Trade during the year, and the indications generally were never so encouraging. Every effort will be made to secure at least one new industry, but with the hearty cooperation of the business men, as a whole, even better results are anticipated.

* * *

It is indeed gratifying to make the assertion without fear of contradiction that times have been good here during the past few months, notwithstanding the money stringency which has so seriously affected labor elsewhere. In the course of his remarks at the meeting of the Board of Trade, J. A. Coulter stated that he believed that there was less poverty and fewer men idle in Ingersoll than in any other place of similar size in the Province. He gave it as his opinion that not over fifty men were out of employment here at the present time, while in many places hundreds were out of work. In view of these facts it is thought that the spring trade in all lines will be the equal of, if not ahead of, the average.

GODERICH.

Goderich, Feb. 16.—"How many changes do you suppose there have been in the hardware business in Goderich during the past fifteen years?"

"Oh, about nine or ten, I suppose," was the off-hand reply. A hardwareman had done some close figuring and produced the following list of individuals and firms who have hung out their shingle in that period. There are just thirty-one on the list. Here it is:

James Yates, C. C. Crabb, J. Ralph, G. N. Davis, Saunders & McIntosh, Harper & Worsell, McIntosh & Harper, R. W. McKenzie, McKenzie & Howell, McIntosh & Lee, Lee & Harper, Lee & Shephard, C. C. Lee, R Wilkinson, A. B. Davison, N. D. Rougyie, J. B. Hawkins, E. P. Paulin, the Howell Hardware Co., G. Allan, Allan & McIvor, Filsinger & Robinson, J. H. Worsell, H. C. Filsinger, C. J. Harper, W. R. Pinder, J. Nicholson, Worsell & Son, Allan & Co., Cattle Bros.

West of the Great Lakes

Fine Window Displays at Saskatoon—Edmonton Plans Extensive Industrial Strides—New Industries in British Columbia.

SASKATOON.

Saskatoon, Feb. 15.—Some snow and winter weather has made good sleighing once again and created a slight demand for seasonable goods, which up until now were slow in moving.

* * *

Hardwaremen are paying not a little attention to window trimming these days, and this week two displays are worthy of mention. A spacious window in the store of James Clinkskiff is divided into two parts. In the left half a number of washing machines, wringers, tubs, and other kitchen necessities, indicating that spring is near and that these articles will soon be required in the household. On the right, in the background, is a steel range, while in front is a collection of enameled cooking utensils and nickel plated ware. The whole is a well arranged exhibition and is a fair representation of what is kept in a hardware store.

* * *

A splendid display of heaters is to be seen in the Second avenue window of the departmental store of J. F. Cairns. In all there are about a dozen heaters shown of various sizes from the small ones up to the large base burners. In the evening the double heaters are lit by means of electric globes, which gives them an attractive and comfortable appearance from the street. The heaters are not crowded plenty of space being left between each and the window is of the proper height to display goods to advantage.

* * *

Both the displays mentioned are in departmental stores. The windows are not only spacious but are of a suitable height from the street, from which they are intended to be seen. There is only one fault to be found with these departmental store displays, and that is that they are not left in long enough. Many people are only able to visit the business part of the town about once a week, and surely a week is not too long for a well trimmed window to be left in.

* * *

The hardware department of J. F. Cairns' store is now in charge of E. Biglow, who reports that business is good for the season of the year. Mr. Biglow informed your correspondent that some alterations would take place on the premises at once and that the hardware department would be extended considerably. Only a few months ago the space occupied by the department was doubled, but it has been found necessary to still further expand in order to show a full line of goods.

* * *

The tinshops are practically at a standstill and are likely to remain so for a couple of months. In plumbing and heating too only a few small jobs are engaging the attention of the plumbers.

* * *

This week a tall smoke stack is being placed on the Saskatton Milling and Elevator Company's premises. One is also being erected on the C.N.R. roundhouse.

* * *

In a recent issue of Hardware and Metal your Chatham correspondent brought up the subject of house numbering. This is a matter which could be dealt with to advantage by most towns in the west. The numbering of houses would save a great deal of time to merchants and drivers in the delivery of goods and should be seen to when a city has attained a certain population. Just recently it was proposed to get up a directory of this city, but such an undertaking would be of very little use unless the streets were previously numbered.

EDMONTON.

Edmonton, Alta., Feb. 10.—The hardware business in Edmonton is very satisfactory at the present time, according to the reports of the hardware merchants in Edmonton, interviewed by the representative of Hardware and Metal during the past week. Trade is probably not so good as last year, but considering the conditions prevailing throughout the country it is satisfactory. With the opening of the spring a great deal of work that was of necessity stopped during the winter will be resumed, and the direct result of this will be to stimulate trade and increase business generally. Collections are good and there have been very few hardware failures in the West.

At the Supreme Court this week Edward Morgan was tried before Mr. Justice Harvey on the charge of arson and of attempting to defraud the British American Insurance Co. out of the insurance on his store and stock. Morgan was a hardware merchant at Mannville, a small town on the C.N.R., near Edmonton. According to the charge, he removed a large quantity of goods from the store, secreting them in his boarding house. He then set fire to his store and put in his claim for the full amount of the insurance. The case was watched with a great deal of interest by the residents of Mannville and by others who knew the circumstances of the case and the accused. After a lengthy trial he was acquitted by the judge on both charges.

* * *

A. G. Harrison, secretary of the Board of Trade, received a letter recently from Mr. Birch, secretary of the Fire Underwriters' Association, of Winnipeg, to the effect that a reduction would be made in the fire insurance rates in Edmonton. The Board of Trade has been fighting for this for several months and the news is very welcome to Edmonton business men. The reduction will mean a saving of $22,000 a year in premiums to business men in the city. The increase has been brought about by the passing of a by-law defining the fire limits and prohibiting the erection of any buildings within this area that are not of certain dimensions and that are not constructed of stone or brick. A new and up to date fire fighting apparatus has also been installed and two new fire halls opened, so that the city is well protected from fires. It is probable that the Board of Trade will demand a further reduction in the rates in the near future, when the new auxiliary fire engine is installed, as this will greatly increase the efficiency of the fire protection in the city.

* * *

Some quiet but effective work has been done during the last few months regarding the matter of industries by the Edmonton Board of Trade. The first step taken was to ascertain, not what the good points that Edmonton had were, but in what way it was at all handicapped from becoming an industrial centre. First, there appeared the question of the high price of sites; second, the question of the price of fuel; third, the question of taxation; fourth, the question of sufficient skilled labor at a fair wage; fifth, the question of freight rates; and, sixth, the manner in which the advantages that Edmonton has to offer to manufacturing concerns should be made known to the world at large.

* * *

While the city offers to the users of a large amount of power, rates that are as low as the lowest, still the users of a small amount of power feel that they are entitled to a lower rate. This matter, no doubt, will be dealt with in due

course, and, in fact, steps are being taken by the Board of Trade to call together all the local manufacturers to discuss this matter.

"It is, however, all very well for us as citizens of Edmonton," said Secretary Harrison, of the Board of Trade, "to know that we have or will have these advantages, but steps must be taken in order that the manufacturer, the kind whom we think will succeed here, shall be posted in regard thereto. General literature which has been a credit to the city, and of value, has been distributed from year to year in large quantities, but when trying to reach a manufacturing concern it is obvious that statistics, showing the rapid growth of the city, its clearing house returns, its custom house returns, its financial condition, the amount of wholesale business done, and many other similar matters are required. Statistics of this kind are being tabulated, and bulletins show the growth of such industries as the coal industry, the brick industry, the lumber industry, the concrete industry, and the flour milling industries are being issued to members of the Board of Trade and will be embodied in next year's literature for the use of the general public."

* * *

R. F. Miller, a popular business man of Edmonton, has gone to Calgary, where he has entered into partnership with his father in the hardware and heating lines.

* * *

The demand for high-class stoves, both in Edmonton and in all parts of the West, is steadily increasing. People are beginning to realize that it is good policy to purchase good stoves, even although they cost more money at first. One noteworthy feature about the stoves being sold now, said a hardware merchant, is the fact that more stoves of a plain and sensible ornamentation are being purchased in preference to the more elaborate ones. Less nickle is used in ornamenting the stoves, and the effect is more in keeping with the use of cook stoves.

VANCOUVER.

Vancouver, B.C., Feb. 14.—Hardwaremen report an improvement in business, which is a good feature. This is in a general way, and, while it can be noted, it is difficult to particularize. Although money may not be as free as a year ago there is an opening up in mining and even in lumbering, which indicates a good trade. Building, too, is good in all the coast cities, with several bridge constructions in prospect.

* * *

The matter of the agreement with the Grand Trunk Pacific came up in the Legislature this week, and from the statement of the Premier, it is probable that a definite announcement will be made shortly. The matter will be laid before the eastern heads of the company and when their decision is given, details will be made public. The point of this is that the adjustment of the differences between the company and the British Columbia Administration will be followed by activity at Prince Rupert and in the north, which will mean much for the hardware trade, as construction of various kinds will be the order of the day. Not much has been done at Prince Rupert up to the present, but all is in readiness for rapid progress. Coupled with the building up of the new city will be the construction of the line from Prince Rupert. East. The opening of new districts will come as a natural consequence, and as mining propositions have been advanced to the point of waiting for railway transportation facilities, the progress should be marked. One thing to be noted, is that Americans are largely interested in the north, and sawmill and mining machinery orders are liable to go to firms on the other side, unless Canadians get in early after the business.

W. H. GINDER,

President and Managing Director, The Ontario Lantern and Lamp Co., Hamilton, Ont.

LANTERN COMPANY HAVE GOOD YEAR.

The annual meeting of the shareholders and directors of the Ontario Lantern & Lamp Company, Limited, Hamilton, Ontario, was held on Tuesday at the head office in Hamilton. This firm during the past year have added one-third floor space to their entire manufacturing plant, which shows a wonderful increase not only for their brass and tinware departments, but also their incandescent lamp department for the manufacture of Shelby and Brilliant Electric Lamps, which are known to the trade throughout Canada.

The following officers were elected for the ensuing year:

W. H. Ginder—President and Managing Director.

F. W. Gates—Vice-President.

J. T. Connor—Secretary.

Mr. Ginder, president and managing director, is still a young man, and his success is due to his thorough knowledge of both the practical and sales end of the lantern business. He came to the Ontario Lantern Co. four years ago from Waterbury, Conn., where he was interested in the same line of business.

Mr. Connor, secretary, has been with the firm for 13 years, and was located in Montreal up until about two years ago, when he was transferred to the head office in Hamilton.

A new catalogue is now on the press which will show that the company have added a large number of new lines. This catalogue will be ready for mailing within a month.

DUTIES ON WIRE ROPE.

From our special Ottawa correspondent.

Ottawa, Feb. 19.—The Canadian Board of Customs had an open sitting for two days this week, at which several matters of importance were argued. Chief amongst these was the question as to what constitutes well drilling machinery not made in Canada. Item 469 of the tariff states that "Well-drilling machinery and apparatus of a class or kind not made in Canada, for drilling for water, natural gas and oil, and for prospecting for minerals, not to include motive power," shall enter free of duty, no matter what the country of origin may be. Messrs. D. A. Coste, C. E., of Niagara Falls, and J. Kelly, of Victoria, B.C., contended that wire rope or cable for well-drilling purposes is not made in Canada. Mr. Coste is connected with the Provincial Natural Gas & Fuel Company, of Welland, while Mr. Kelly has successfully carried out boring operations for oil in the Province of Alberta. These gentlemen also held that manilla rope, as required for well-drilling purposes, was not made in the Dominion, in the requisite lengths, namely, from 1,500 to 3,500 feet long.

With reference to their former contention these gentlemen had to admit eventually that the wire cable rope, such as they require, is made in Canada. The evidence upon this point, as submitted by the representatives of a number of firms, was indisputable, and therefore, it will not be a matter of surprise if the Customs Board decides not to place wire rope for well-drilling on the free list. With regard to the manilla rope of the great lengths insisted upon, the question is surrounded with more difficulty, and possibly the board will give a liberal interpretation on this subject.

Another moot question which was presented to the board had reference to the tools required for well-drilling machinery. Messrs. Armstrong and Pardee, M. P.'s, contended that all the required tools were made in Canada, and this was met with the objection that they were not made in sufficient quantities that supplies could be obtained upon short order when wanted. The decision of the board on all these questions will be announced next week.

Somebody has said the telegraph is the nervous system of civilization, and the salesmen are the operators. We want more shocks in our factory—we will risk our nerves.

Hardware Letter Box

Any questions on trade subjects will be answered by the editor in this department. Do you want any address, any special line of goods, anything relating to the hardware trade? Ask us. Letters from manufacturers, jobbers, travelers, retailers or clerks are solicited. Suggestions for trade improvement or discussions on trade evils are invited.

Wire Goods.

M. S. Sutton, Andover, N.B., asks for the names of different firms in Canada making wire goods such as wire baskets suitable for making display stands, shown on page 220 in "The American Hardware Store."

Answer.—Partridge & Sons, Kingston, Ont., and the Canada Wire Goods Manufacturing Company, Hamilton, Ont. —Editor.

Electros of Cuts.

R. F. Johnstone & Co., Acton, Ont., write: "Where can we secure electros of articles sold in hardware stores?"

Answer.—The Iron Age, 14-16 Park Place, New York, and the National Hardware Bulletin, Argos, Indiana, carry stock electros for illustrating ads. The Toronto Engraving Co., and the Grip Engraving Co., Toronto, make the cuts, but do not carry made-up stocks. —Editor.

Advertising Novelties.

J. H. Worsell & Son, Goderich, ask for the name of some firm making advertising novelties such as yard sticks, etc.?

Answer.—Cranston Novelty Co., Stair Building, Bay street, Toronto, and the Advertising Novelty Co., 295 King St. west, Toronto.—Editor.

Moving Buildings.

Stillman Bros., Keene, Ont., write:—"Inform us through your letter box the name of a firm who make or are agents for rollers suitable for moving buildings."

Ans.—Any planing mill can turn out rollers adapted to your needs. R. Laidlaw & Co., St. Lawrence avenue, Toronto, have turned out rollers for Toronto concerns.—Editor.

Thermometers.

B. F. Bray, Foam Lake, Sask., writes: "Let me know the address of firms who could supply thermometers of a better class than those generally handled by the hardware trade."

Answer.—The following firms manufacture high-grade thermometers: Negretta & Zamber, Hatton Garden, London, Eng.; R. Horn & Co., New York, and Taylor Bros., Rochester.—Editor.

PARTNERSHIP DISSOLVED.

The partnership constituting the Canadian Sewer Pipe Co. has been dissolved. The Canadian Sewer Pipe Company was formed a few years ago, and consisted of the Standard Drain Pipe Co., St. Johns, Que., and New Glasgow, N.S., the Hamilton & Toronto Sewer Pipe Co., Hamilton and the Ontario Sewer Pipe Co., Toronto. Each branch will now carry on its own business independently.

CONDENSED OR "WANT" ADVERTISEMENTS.

RATES.

Two cents per word first insertion; one cent per word subsequent insertions.

Five cents additional each insertion where box number is desired.

Contractions count as one word, but five figures (as $1,000) are allowed as one word.

Cash remittances to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

RULES FOR COPY.

In addressing replies care of HARDWARE AND METAL don't fail to give box number.

Replies addressed to HARDWARE AND METAL boxes are re-mailed to advertisers every Monday, Wednesday and Friday.

Requests for classification will be followed where they do not conflict with established classified rules.

Orders should always clearly specify the number of times the advertisement is to run.

All "Want" advertisements are payable in advance.

AGENTS WANTED.

This is the problem of many manufacturers who are anxious to get a foothold in Western Canada. It will be easily solved if HARDWARE AND METAL is given the opportunity to solve it.

WANTED—Hustling agents to sell Weldarine, the only compound that will weld cast-iron, making the joints stronger than the original metal; tremendous demand. Will sell to responsible parties the rights for Ontario and Quebec. Weldarine Agency Company, D.S. Morgan Building, Buffalo, N.Y.

AGENT wanted to push an advertised line of Welsh tinplates; write at first to "B.B.," care HARDWARE AND METAL, 88 Fleet St., E.C., London, Eng. [tf]

FIRST-CLASS English firm, manufacturing A1 line of metal polish, wishes to secure Canadian agents for Maritime Provinces, and Western Canada. Have already secured agents for Ontario, who have handled their line for nearly a year, and have found it very ready seller. For full information apply Box 690, HARDWARE AND METAL, Toronto. (4tf)

AGENCY WANTED.

WANTED ONTARIO AGENCY for stoves, hardware specialties, refrigerators, metal beds, etc., manager of a large manufacturing establishment is opening an office and sample room with storage facilities in Toronto, March 1st; has large experience, thoroughly acquainted with the trade, two traveling salesmen, and out for business. Will be pleased to interview or correspond with any firms open to be represented in above lines in Toronto and Ontario on commission. Address S. & Co., HARDWARE AND METAL, Toronto. (9)

SITUATIONS WANTED.

Travellers, clerks, or tinsmiths, wishing to secure new positions, can engage the attention of the largest number of employers in their respective lines, by giving full particulars as to qualifications, etc., under "Situations Vacant."

WANTED—By experienced hardwareman, position in first-class retail hardware store or in wholesale house. Good Winnipeg references. Box 2, HARDWARE AND METAL, Winnipeg. (10)

You can secure a "five-thousand-a-year" manager, or a "five-hundred-a-year" clerk, by stating your wants under "Situations Vacant."

WANTED—Experienced Invoice Clerk for Wholesale Hardware. Must be quick and accurate at figures. One who has had experience in this line preferred. English. State references and salary expected. P.O. Box 2345, Montreal. (8)

SALESMAN wanted for hardware trade to carry good selling side-line on commission; give references Box 906, Galt, Ont. (10)

WANTED—An up-to-date hardware man who has a thorough knowledge of tinsmithing and furnace work; one who can work and manage either department when required, must be a hustler and not afraid of work. Apply at once giving reference and stating salary required. D. Hall Sutherland, Conora, Sask. (10)

WANTED by April 1st practical man who can superintend the erection of steel water works stand pipes and push the work along with dispatch. Must be experienced man, sober and reliable and be able to furnish recommendations from reliable firm he has worked for. Apply Box 695, HARDWARE AND METAL, Toronto. (10)

BUSINESS CHANCES

PARTNER WANTED—To take half interest in a good new hardware and harness store; location, Saskatchewan; would like one with some experience as harness-maker, and invest about $2,000 in money; will give full particulars on application. Box 694, HARDWARE AND METAL, Toronto. (9)

WANTED—Good live hardware business in Manitoba, Saskatchewan or Alberta. Owners only. Box 22, HARDWARE AND METAL, Winnipeg. (10)

BUSINESSES FOR SALE.

Somewhere in Canada is a man who is looking for just such a proposition as you have to offer. Our "For Sale" department brings together buyer and seller, and enables them to do business although they may be thousands of miles apart.

HARDWARE, stove and tin business in one of the best manufacturing towns in Ontario; stock nine thousand; clearing two thousand yearly. Principals only dealt with. Address Box 693, HARDWARE AND METAL, Toronto. (8)

HARDWARE business for sale in live town near Toronto; established over 30 years; includes store building and tinsmithing department; good reasons for selling. Box 686, HARDWARE AND METAL, Toronto. [8]

FOR SALE—A well-established hardware, tinware and furniture in a good town in Ontario; stock about $6,000; yearly turnover about $16,000; satisfactory reasons for selling. Apply Box 681, HARDWARE AND METAL, Toronto. (8)

FOR SALE OR RENT—Well-established hardware, tinsmithing, roofing and furnace heating stand without stock in a small town situated in a rich farming community in Eastern Ontario, five minutes walk from G.T.R. station acytelene gas and hot air heating plants, also good dwelling in connection. For particulars apply to D. Courville, Vankleek Hill, Ont. (7)

HARDWARE and tinware in good growing village. Stock about forty-five hundred. Turnover ten to twelve thousand, easily increased. No opposition. Building for sale or rent. Death of owner. Principals only dealt with. Box 696, HARDWARE AND METAL, Toronto. (9)

Business for Sale

AS we intend to confine ourselves to the Wholesale Hardware business in future, we have for sale our retail general hardware business. This business has been established for over twenty years and always has been and is now a profitable one. Correspondence solicited, but as it will require $10,000 cash at least to swing the transfer, we expect evidence of your good faith when you write.

McLENNAN, McFEELY & CO.
Limited
VANCOUVER, B.C.

When writing to advertisers, kindly mention having seen the advertisement in this paper.

MANITOBA HARDWARE AND METAL MARKETS

Corrected by telegraph up to 12 noon Friday, Feb. 21, Room 511, Union Bank Bldg, Winnipeg, Man.

A marked improvement in general business is reported by the trade, wholesale and retail. Prospects for spring business are bright.

Wire—Barbed wire, 100 pounds, $3.25; plain twist, $3.40; staples, $3.40; annealed wire, $2.90 base; oiled, 10c extra; bright iron, $3.10 base; brass spring wire, 32c base; plain galvanized wire, 6, 7 and 8, $3.70; No. 9, $3.25; No. 10, $3.70; No. 11, $3.80; No. 12, $3.45; No. 13, $3.55; No. 14, $4.10.

Poultry Netting—The discount is 57½ per cent.

Horseshoes—Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

Horsenails—No. 10 and larger, 22c; No. 9, 24c; No. 8, 24c; No. 7, 26c; No. 6, 28c; No. 5, 30c; No. 4, 36c per lb. Discounts: "C" brand, 40, 10, 10 and 7½ p.c.; "M.R.M." cold forged process, 50 and 10 p.c. Add 15c per box. Capewell brand, quotations on application.

Wire Nails—$3 f.o.b. Winnipeg, and $2.55 f.o.b. Fort William.

Cut Nails—Now $3.20 per keg.

Pressed Spikes—¼ x 5 and 6, $4.75; 5-6 x 5, 6 and 7, $4.40; ⅜ x 6, 7 and 8, $4.25; 7-16 x 7 and 9, $4.15; ½ x 8, 9, 10 and 12, $4.05; ⅝ x 10 and 12, $3.90. All other lengths 25c extra, net.

Screws—Flat head, iron, bright, 80, 10, 10 and 10; round head, iron, 80; flat head, brass, 75; round head, brass, 70; coach, 65.

Rivets—Iron, 60 and 10 per cent.; copper. No. 7, 36½c; No. 8, 37½c; No. 9, 38c; No. 10, 40c; No. 12, 43c. Assorted, No. 8, 38½c and No. 10, 41½c.

Green Wire Cloth—$1.75 per 100 square feet.

Coil Chain—¼-in., $7.25; 5-16, $5.75; ⅜, $5.25; 7-16, $5; ½, $4.75; 9-16, $4.70; ⅝, $4.65; ¾, $4.65.

Shovels—Discounts are 40 and 5 p.c.

Harvest Tools—50, 10 and 5 p.c.

Axe Handles—Turned, s.g. hickory, $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

Axes—Bench axes, 40 and 5; broad axes, 5½ to 7½, $21.00 per dozen; 7¾ to 8¾, $23.00 per dozen; Royal Oak, per doz., $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.50; Copper King, $8.25; Columbian, $9.50; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.75; Copper King, $10.50 per dozen.

Auger Bits—"Irwin" bits, 47½ per cent., and other lines, 70 and 10 per cent.

Blocks—Steel blocks, 35; wood, 60.

Hinges—Light "T" and strap, 65.

Hooks—Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

Files—Arcade, 75; Black Diamond, 60; Nicholson's, 62½ per cent.

Locks—Peterboro and Gurney 40 p.c.

Stove Pipes—6-in., per 100 feet length, $9.25; 7-in., $10.

Tinware, Etc.—Pressed, retinned, 70; pressed, plain, 75 and 2½; pieced, 25; japanned ware, 35; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; White, 70 and 5; Diamond, 50; Granite, 60 per cent.

Galvanized Ware—Pails, 37½ per cent.; other galvanized lines 33 1-3 per cent.

Solder—Quoted at 22c per lb.

Lanterns—Cold blast, per dozen, $7; coppered, $9; dash, $9.

Churns—45 and 5; list as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

Wringers—Royal Canadian, $36; B.B., $40.75 per dozen.

Lath Yarn—10¾c.

Rope—Sisal, 10½c per pound, and pure manila, 14¾c. British manila, 11¾c.

Building Paper—Anchor, plain, 60c; tarred 62½c; Victoria plain 67½c; tarred 84c; No. 1 Cyclone, tarred, 84c; No. 1 Cyclone, plain, 66c; No. 2, Joliette, tarred, 69c; No. 2, Joliette, plain, 51c; No. 2 Sunrise, plain, 56c; Jubilee plain, 75c; Jubilee tarred, 88c; Buffalo plain, 66c; Buffalo tarred, 69c; Lion plain, 55c.

Corrugated Iron and Roofing, Etc.—Corrugated iron, 28 gauge, painted, $3; galvanized, $4.10; 26 gauge, $3.35 and $4.35. Pressed standing seamed roofing, 28 gauge, $3.45 and $4.45. Crimped roofing, 28 gauge, painted, $3.20; galvanized $4.30; 26 gauge, $3.55 and $4.55.

Ammunition, Etc.—Cartridges, rim fire, Canadian, 50 per cent.; American, 33 per cent.; pistol sizes, Canadian, 25 per cent.; American, 5 per cent.; military, Canadian, 20 per cent. off. American, 10 per cent. advance. Primers, $1.55. Loaded shells: English and Canadian makes, 12 gauge black soft, $18; 10 gauge, $22.50; 12 gauge smokeless, chilled, English, $24; Canadian, $23; 10 gauge smokeless, chilled, English, $28; Canadian, $27. Shot: Drop, per 100 lbs., $6.75; chilled, $7.15; buck, $7.55; 28 ball, $7.95. Powder: F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.

Iron and Steel—Bar Iron basis, $2.70. Swedish iron basis, $4.95; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel: Black Diamond, 100 lbs., $9.50; Jessop, $13.

Sheet Zinc—$8.50 for cask lots, and $9 for broken lots.

Pig Lead—Average price is $6.

Lead Pipe—Quoted at $7.25.

Copper—Planished copper, 29½c per pound; tinned, 26½c.

Iron Pipe—Black pipe, ¼-in., $2.70; ⅜, $2.85; ½, $3.75; ¾, $4.75; 1, $6.75; 1¼, $32.30; 3½, $40.50; 4, $46; 4½, $54. Galvanized: ¼-in., $3.65; ⅜, $3.80; ½, $4.50; ¾, $5.80; 1, $8.40; 1¼, $11.40; 1½, $13.80; 2, $18.40.

Fittings—Wrought couplings, 55 per cent.; nipples, 70 per cent.; classified malleable fittings, 25 per cent.; malleable bushings, 50 per cent.; malleable unions, 55 per cent.

Galvanized Iron—Apollo, 16-gauge, $4.15; 18 and 20, $4.40; 22 and 24, $4.65; 26, $4.65; 28, $4.50; 30-gauge or 10¾-oz., $5.20; Queen's Head, 20, $4.60; 24 and 26, $4.90; 28, $5.15.

Tin Plates—I.C. charcoal, 20x28, box, $10; IX charcoal, 20x28, $12; XXI charcoal, 20x28, 14.

Terne Plates—Quoted at $9.50.

Canada Plates—18x21, 18x24, $3.50; 20x28, $3.80; full polished, $4.30.

Lubricating Oils—600 W. cylinders, 80 cents; Maple Leaf cylinder, $1 per gal.; 700 A. cylinder, 75c; Sterling cylinder, 55c; 600 A. cylinder, 50c; Capital cylinder, 59c and 54c; Solar red engine, 32c; Atlantic red engine 29c; heavy castor, 29c; medium castor 28c; Ruddy harvester 30c; standard gas engine oil 36c; Renown engine oil, 38c.

Petroleum and Gasolene—Silver Star, in bbls., per gal., 20c; Sunlight, in bbls., per gal., 22c; per case, $2.45; Eocene, in bbls., per gal., 24c; per case, $2.60; Pennoline, in bbls., per gallon, 25c; Silver Light, 22c; Starlight, 20c per gal.; Sterling Light, 24c per gallon. Engine gasolene, in barrels, gal., 24c, f.o.b. Winnipeg, in cases, $2.60.

Bluestone—7c lb.

Paints and Oils—White lead, pure, $6.50 to $7.50, according to brand; bladder putty, in bbls., 2½c; in kegs, 2¾c; turpentine, barrel lots, Winnipeg, 77½c. Linseed oil, raw, Winnipeg, 65c; Calgary, 77c; Lethbridge, 77c; Edmonton, 78c; boiled oil, 3c per gallon advance on these prices.

SPRAMOTORS IN DEMAND.

The Spramotor Co., of London, Ont., has made most rapid advancement during the last ten years, commencing in a small way, making only hand sprayers. They have each year added to their line until now they claim to be the largest manufacturers of their line in the British Empire. From a small trade occupying three months of each year, it has been expanded by remarkable energy, until its products are sent into nearly all the countries of the world. The latest orders coming from far away India, where in contest by the India Tea Association, the Spramotor proved 50 per cent. more effective and economical than others of the best foreign manufacture.

Six years since the trade in the United States demanded attention and the company started a branch at Buffalo, N.Y., which bids fair to outstrip the home factory at London, where, notwithstanding the general shrinkage of business lately, has been advancing every month. The company now makes machines for spraying fruit trees, vineyards, potatoes, and weed destruction, ranging in size from the smallest hand machine to the largest gasoline and horsepower outfits. W. H. Heard, the manager, has in the last ten years perfected twenty distinct patented improvements, all of which are marketed under the trade name "Spramotor."

When duty and diligence is a delight to a salesman, his success is assured, no matter what hardships he must face.

TO MAKE AN IDEAL PAINT

that will stand the trying weather conditions of Western Canada has been our object.

Stephens'
HOUSE PAINT

is our attainment—it is right because

IT covers wears looks **WELL**

It is always in stock!

You would have no difficulty in proving this, by ordering at once any of the numerous shades. It is a paint that has become a favorite with hundreds of retailers, because it has always pleased their customers.

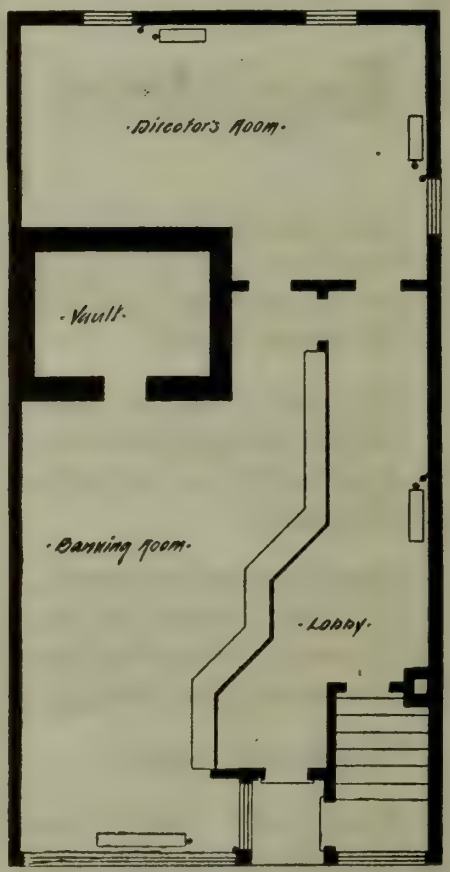
Practical Talks on Warm Air Heating

The Fifteenth of a Series of Articles by E. H. Roberts.

As there are limitations to the practicability of furnace heating, so there are to hot water heating as well. Theoretically, hot water heat can be adapted to almost any building and there are central hot water plants that satisfactorily supply heat to scores of houses, but in large, high buildings the pressure of the water is often so great as to make it impossible to prevent the boiler and pipes from leaking. It is also a difficult matter to secure anything like an even temperature of the water through long mains and a complex system of radiators without keeping the water under a high pressure.

Water boils at a temperature of 212 degrees Fahrenheit and, therefore, the water in an open tank hot water system must necessarily be carried at a somewhat lower temperature. Ordinarily 180 degrees is considered the most satisfactory maximum and this is the temperature on which most rules for estimating water radiation are based.



Basement Plan.

Steam, on the other hand, does not form until the water in the boiler has reached the boiling point, and being so much hotter than the water in a hot water system, steam radiation is much more efficient than hot water radiation.

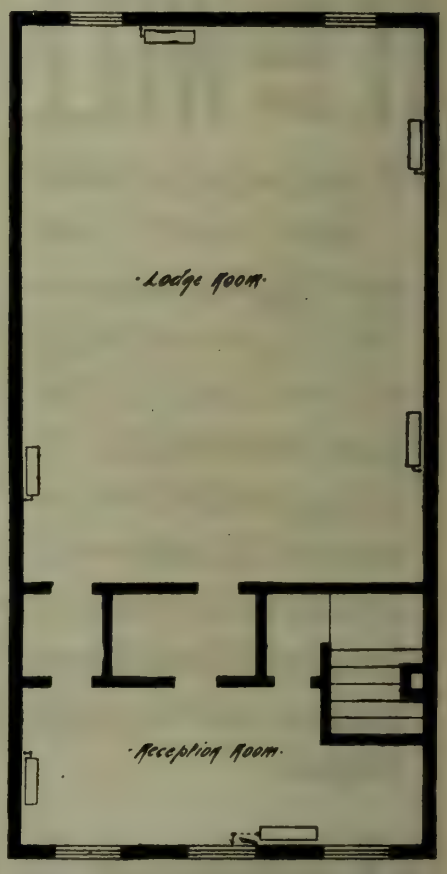
Advantages of Steam.

The advantages of steam may be briefly summed up as follows; First, it circulates much more rapidly than hot water and can be adapted for all classes of buildings from the largest to the smallest—second, it requires less piping, less radiation, less labor for installation and is, therefore, cheaper than hot water heat.

But, although steam is so universally

First Floor Plan.

possible and considerably cheaper than hot water, it does not necessarily follow that it is the ideal heat for all buildings. There are buildings which can be heated better and more economically with warm air than with any other system, in some hot water is the preferable and logical heat and then there are a very large class of buildings in which it is better to use steam.



Take this bank building as an example. The first floor will be used continually with the exception of Sundays and holidays, but the second floor is to be used as a lodge room and no heat is required there more than perhaps two or three times in a week, and then only during the evening.

Hot Water Not Satisfactory Here.

It seems clear that hot water would not be satisfactory here, for, on account of the by-passes in the hot water radiator valves, so arranged to avoid danger from freezing, the upper part of the building would be moderately heated just as long as the heating plant was in operation. Steam, however, can be closed off from any radiator or the entire second floor without danger, and moreover, the lodge room and reception room can be heated, whenever heat is wanted, in less than one-fourth the time with steam that would be required to accomplish this result with hot water.

The Basement Plan.

Now, referring to the accompanying basement plan, you will notice that the boiler is located quite near the chimney.

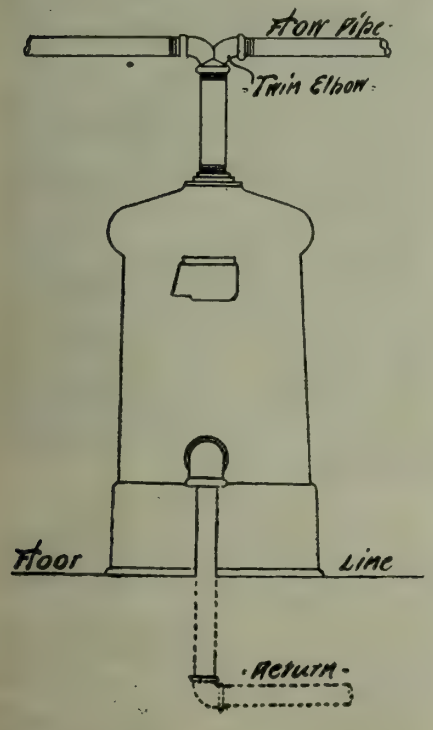
Second Floor Plan.

for with steam particularly a strong fire is necessary in order to raise steam quickly. The boiler shown is of the round type and has a single steam outlet directly at the top.

Unlike hot water, steam mains should

be graded down from the boiler so that the condensation will travel with the steam instead of against it. The old practice was to grade steam pipes from the boiler and this usually resulted in much pounding and hammering caused by the water working back against the steam.

Danger of Pounding Reduced.



Of course, in a one-pipe steam job such as we are studying, it is necessary to grade the branches up from the mains in order to draw the condensation back, but the danger of pounding as a result of friction between the steam and returning water may be greatly reduced, if not entirely eliminated, by making the horizontal arms of one size larger pipe than the connecting riser.

For example, if the radiator for which the branch is made requires a 1¼ inch pipe, it would be proper to use a 1½ inch horizontal branch in basement. It is also advisable to make these horizontal branches as short as possible. Some fitters do not advocate branches longer than five feet, except, perhaps, near boiler, where the amount of condensation will be very small.

Usually a steam plant is laid out with two mains running in opposite directions around the building, as two comparatively short steam mains are preferable to one long one unless several returns or bleeders, as they are called, are used to separate the water from the steam.

The Steam Plant Here Shown.

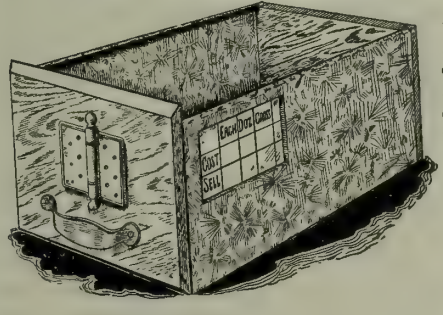
The steam plant shown here has two mains and at the extreme end of each the pipe drops to the floor and runs

underground, as indicated by dotted lines, to connect with the return opening at the back of the boiler. These returns should be considerably smaller than the steam mains as the volume of

Fly Time is Coming—Be Sure to Order Plenty of *S-W. Screen Enamel.*

Don't underestimate the demand for this popular specialty. When Spring comes people want to brighten up old screens that are rusty and dingy and make them look like new.

At the proper time have a little Screen Enamel Campaign—display the goods prominently in the front part of your store—trim your windows—talk the goods at every opportunity—advertise them well. The amount of business you can secure in this way will surprise you—and some of the customers you start will continue to buy from you.



Made in two colors, Black and Green. Put up in convenient sized packages, ready for use.

Every dealer ought to have a stock of Sherwin-Williams Screen Enamel. Write us for prices and full particulars.

THE SHERWIN-WILLIAMS CO.
LARGEST PAINT AND VARNISH MAKERS IN THE WORLD

Some Goods Sell Themselves

that is if they are properly displayed. Articles like wrenches, floor spring hinges, expansion bolts, squares, rules, automatic awls and screw-drivers, etc., should be accessible to customers ; not hidden away in packages. Keep them in view if you want to sell them.

The best salesman is the man who creates a demand for goods, convinces customers they want articles they had not thought of buying. Display your goods well and they will act as silent salesmen for you.

They will suggest articles customers had not thought of buying.

The Bennett Steel Shelf Box

is the strongest and most serviceable box made. It has steel sides and wood front and back. There are no nails on the outside, the steel is locked into the wood by our own patented process.

Write for Price List and Full Description.

SOLE MANUFACTURERS :

Cameron & Campbell, - Toronto, Ontario

condensed steam is small as compared with steam in its original state.

It is not necessary to run the returns under ground, but if they are below the water line of the boiler there is less danger of the water from the boiler being forced out, either through the steam outlet or the return opening.

Space does not permit us to explain every detail of work for installing a steam plant of this kind, but enough has been said to enable anyone of a mechanical turn of mind to grasp the essential principles.

PLAINER STOVES.

The trimmings and decorations on stoves of the better class, especially on high grade ranges, is running to extremely plain designs this season among some of the country's leading stove manufacturers' makes.

The nickel is not being eliminated by any means ; but it is not used to excess, and that used is of rather a plain character.

The reason for this is due largely to the fact that so many poor, cheaply gotten up stoves have been placed on the market during the past few years, which to make them sell, have been literally covered with nickel or fancy design, that elaborate decorations are beginning to make the product look cheap ; and the makers of the better class of stoves are striving to get away from this cheapening appearance.

What is true of stoves in this regard is true of many things in the house-furnishing line just now. The general tendency of the people with refined tastes is to get away from the gaudy and flashy, which has been so much used to disguise really cheap goods ; so that the very plain and substantial is having the call.

The plainly designed stoves will, without question, meet with the hearty approbation of the housewife, not only from the point of general appearance, but also because it will be so much more easily kept clean.

CULTIVATE THE BUILDER.

Hardware dealers who have determined to get some furnace business this year, should keep in close touch with the local builders and contractors, as well as with the lumber dealers.

The time to begin to sell the furnace or other heating plant is when a party is starting to build.

Not only is it important to interest the prospect at this early stage of the game in order to ultimately make the sale ; but it is more important that, in the building, provisions be made for the installation of the plant.

If a furnace is to be installed, the chimney should be built larger and started at the bottom of the cellar, with this end in view. The hot air ducts for the upstairs apartments can be much better and more economically placed when building than afterwards.

Possibly, too, the arrangement of rooms and partitions could profitably receive consideration to some extent if the heating plant were in mind.

Usually, too, contractors, builders and lumber dealers are cognizant of the advantages of the modern heating plant, and by keeping in friendly touch with them, their influence will be used to your good on the heating question.

BUILDING AND INDUSTRIAL NEWS

For additional items see the correspondence pages. Information is solicited regarding building and industrial news, the incorporation of companies, establishment or enlargement of mills, factories or foundries, municipal water works and sewerage systems, railway or mining news, etc.

Recent Inventions.

F. A. Delph, New Orleans, has invented and received a patent on an attachment for the fireplace or grate frame. The improvement consists of a supplemental frame, to which the plate having the heating pipe or flues attached is hinged in such a manner that the whole can easily swing to any desired position.

W. H. Callihan, Beaumont, Tex., has invented an improved heater of the kind which consume crude oil or other hydro-carbon oil as fuel and its object is to insure complete combustion and to produce a uniform heat at a minimum expenditure of liquid fuel and to prevent the escape of obnoxious gases and soot into a room where the heater is in use.

Industrial Development.

The Canadian Steel Rolling Mills Company will erect a foundry at Campbellford, Ont., to cost $60,000.

A writ for $51,300 was taken out at Toronto this week against The Northern Iron & Steel Co., Collingwood. The action is being taken by H. K. Wood, New York. As a result the company will probably be compelled to foreclose.

Large deposits of iron ore of the hemalite variety have been discovered near Port Arthur during the week. Assays show the deposits to be from 50 to 67 per cent. iron. The new discoveries are extensive and are near the line of the G.T.P.

Prospects are exceedingly bright for the opening of Blairton iron mines in the spring. Very good ore has been met with so far. A diamond drill has been placed in operation now, and it will soon be found out what the mine really does contain.

A big lime plant is to be established on Tyendenaga Reserve, near Shannonville this year. The plant, which will cost about $25,000, is to have a capacity of 1,000 bushels of lime a day. The company have secured 200 acres of land from the Mohawk Council.

The modern plant of the Canadian Billings & Spencer, Limited, of Welland, Ont., which has been in course of erection since May, 1907, is now in full running order. This is practically the first drop forging plant in Canada, and it is welcomed by all users of drop forgings, which are used for intricate parts of machinery where strength and durability are very essential. They will also manufacture machine wrenches, lathe dogs, machinists' tools, locomotive forgings, railroad supplies, etc. This firm located in Welland, where they could procure cheap electric power and natural gas, the latter being used entirely for fuel. With these natural advantages they are in a position to compete with any drop forging plant on the continent.

Building Notes.

H. Hutton, Toronto, will erect brick houses to the value of $12,000.

Wickson & Gregg, Toronto, will erect a two-storey brick factory at a cost of $16,000 this spring.

Hugh Springer, Vancouver, is forming a company to build an apartment house at a cost of $250,000.

Alterations to the Sterling Bank, Toronto, have been started. The cost will be $4,000.

The National Finance Co., Limited, Vancouver, will erect a new three-storey office block at that city. Building operations will start March 1.

The congregation of the Lutheran Church, Stratford, have decided to build a new edifice this year. The site has been purchased and tenders will be called this month.

It has been decided to erect an auditorium on the front of the College Street Methodist Church, Toronto. The estimated cost is about $20,000. The Westmoreland Avenue Church, Toronto, recently destroyed by fire, will be rebuilt at a cost of between thirty-five and forty-five thousand dollars.

Companies Incorporated.

The Watson Carriage Company, Limited, has been incorporated to deal in and manufacture carriages. The company's charter also provides for the carrying on of a lumber business and a blacksmith shop. The capital stock is $60,000. The provisional directors are, R. E. Watson, J. T. Mexley and R. G. Code, all of Ottawa.

The Queen City Construction Co., Limited, has received a charter to build all kinds of edifices by contract and to deal in building materials. The new compafiy is capitalized at $50,000, and the head office is at Toronto. The provisional directors of the company named are, J. P. Holden, J. A. Jackson and J. E. Denise, all of Toronto.

Samuel Trees & Co., Limited, is the name of a company recently incorporated, with head office at Toronto, for the manufacture of saddlery, saddlery hardware, harness, whips, horse blankets, etc. The capital stock of the company is $50,000, and the provisional directors are, Samuel Trees, J. D. Trees, Samuel Lee Trees, C. F. Trees and Jane F. Trees, all of Toronto.

Municipal Undertakings.

Another new water pipe will be purchased by Winnipeg, which will add about 2,500,000 gallons daily to the capacity of the service.

London will purchase a paving plant for use on the streets of that city. With a $500 equipment the city saved $3,500 on repairs to the roads last year.

Weyburn, Sask., is installing a municipal water supply system. A large supply of splendid water will be brought from an impounding reservoir to a standpipe in the town from where it will be distributed by gravity. Willis Chapman, of Toronto, is engineer.

IVER JOHNSON
SAFETY AUTOMATIC REVOLVER

A revolver that can be discharged in any other way than by pulling the trigger is a mechanical absurdity as well as a constant danger.

The things you can do to an Iver Johnson Safety Automatic Revolver without discharging it would keep you busy all day. The one thing you can't do to it is—fire it in any other way whatever than by pulling the trigger.

Handsome in appearance, made in many styles—like a rifle for accuracy—hard-hitting and speedy—but always safe to handle.

We advertise our revolver on a national scale. It is never sold by mail where a dealer will handle it. And we guarantee the goods. Be sure of the owl on the grip and our name on the barrel.

Send for Dealer's Catalogue or order from your jobber.

WHITE LEAD

"TIGER" WHITE LEAD is popular with the painters all over Canada by reason of its absolute purity, which enables them to get the best results from its use.

Made from strictly pure White Lead and pure Linseed Oil, containing no adulteration whatever.

Every package bears the yellow label of the White Lead Association of Canada, guaranteeing its purity.

Made by

The Montreal Rolling Mills Co.

THE WANT AD.

The want ad. has grown from a little used force in business life, into one of the great necessities of the present day.

Business men nowadays turn to the "want ad." as a matter of course for a hundred small services.

The want ad. gets work for workers and workers for work.

It gets clerks for employers and finds employers for clerks. It brings together buyer and seller, and enables them to do business, though they may be thousands of miles apart.

The "want ad." is the great force in the small affairs and incidents of daily life.

The City of Winnipeg has purchased an entire section on the east side of the city for the benefit of industrial developments. Companies will be given free sites on certain building and operating conditions being filled. The section is easily accessible to the C.P.R.

TRAVELER CHANGES POSITION.

Emile Dansereau, for the past six years Montreal city and Eastern Townships representative of Warden King & Sons, Montreal, has accepted a position on the traveling staff of the Taylor-Forbes Company, and will hereafter sell Sovereign radiators and boilers in the cities and towns throughout Quebec Province.

Before joining the Warden King &

EMILE DANSEREAU, MONTREAL.

Taylor-Forbes Co.'s New Traveling Representative in Quebec Province.

Co.'s staff, Mr. Dansereau had been for some years book-keeper for Jos. Thibeault, one of Montreal's best known master plumbers, looking after the heating contracts and making up of estimates. He is, therefore, well equipped for his new position, having in addition a splendid connection with the French-Canadian trade throughout Quebec. Mr. Dansereau also speaks both English and French fluently.

A DURABLE WHITEWASH.

The following is the formula for a very durable whitewash for shop use. To ten parts of freshly slaked lime add one part of best hydraulic cement and mix well with salt water. This whitewash produces a clear white that does not easily rub or wash off.

Character is easily read by the shrewd merchant as well as by the clever salesman.

Trade Announcements

Catalogues, booklets and other printed matter issued by manufacturers, jobbers, etc., for distribution to the retail trade will be reviewed in this department. Senders of catalogues, etc., for review should draw attention to new lines and retailers, when sending for samples, etc., should mention this paper to show that they are in the trade.

A Fine Calendar.

The Taylor-Forbes Company, Guelph, have presented their customers and friends with a calendar showing a number of "Sovereign" boilers manufactured by them. The calendar will be mailed on request by mentioning this paper.

An Attractive Calendar.

The Intercolonial Railway has issued an attractive calendar for 1908. In addition to the company's trade mark which is attractively displayed for each month a view is shown of special points of interest in Quebec and the provinces. The calendar is printed in colors and reflects credit on its publishers.

Novel Advertising Card.

The Canada Metal Company, Toronto, are supplying customers with a "coon's" head, which is a good sample of "novelty" advertising. In its normal shape the features bear the appearance of a southern negro, but by pressing the jaws he appears to talk, his words being printed on his month and lips. Send for samples.

Saw Show Card.

Spear & Jackson, Sheffield, England, makers of saws, etc., have presented their friends and customers with a colored show card which contains the company's trade mark consisting of a work brench and saw containing the company's guarantee. If your jobbers cannot supply you the above firm will send their handsome show card free by mentioning this paper.

Kitchen Utensils.

An attractive catalogue has recently been received from the Potter Mfg. Co., Geneva, Ohio, describing the kitchen utensils, garden tools, building outfits, etc., manufactured by this firm. The book is carefully compiled and well illustrated with engravings of the company's various lines. Many useful hints are embodied in the publication which will be mailed free to the trade by mentioning this paper.

On Electric Wiring.

Electric wiring and fitting for plumbers and gasfitters is the title of a recent addition to our technical library. The book was compiled by Sydney F. Walker and in simple language makes many technical points clear which will be found of interest to members of the above trades and any others interested in electrical works. The author deals with his subject from the standpoint of a practical man and the book is addressed to plumbers and gasfitters, who in the opinion of the author, will replace the electrician in the near future in work done in the wiring of new buildings. The book will be found of interest and should prove a help to all interested in the subject of electricity and all its branches. The price of the book is 5s. 6d. When writing address The Technical Book Department, MacLean Publishing Co., Toronto.

A Pointer on Cement.

The Hanover Portland Cement Co., Hanover, Ont., have presented the trade with a striking hanger. A barrel and a number of sacks of cement are displayed on top of them appearing a perfect cut of a "pointer" at attention. The background of the hanger is sky blue and the title "A Pointer on Cement" cannot fail to attract attention. The hanger will be sent on request by mentioning this paper.

New Carpet Sweeper.

The Shirreff Manufacturing Co., Brockville, have installed a complete molding equipment and will in future do all their own molding. They have now ready for the trade their newly patented carpet sweeper and are willing to send descriptions on application. The Shirreff Company report business excellent with orders in hand to keep their factory running for several months.

Wire Goods.

The Wire Goods Company, Worcester, Mass., have issued a new and attractive catalogue describing the products of their factory and explaining their trade motto, which reads, "Everything in Wire." The new catalogue contains 240 pages and is well compiled. Many engravings and etchings appear, showing the company's goods and descriptions of the various lines are arranged below the cuts. The new catalogue will be sent on request to dealers on mentioning this paper.

Ramsay's Paint Book.

A. Ramsay & Son Company, paint makers, Montreal, have recently issued their annual spring catalogue. A feature of the catalogue is the reproduction of the cans in which their paint is sold. These illustrations are all done in color and the proper uses for each variety are explained. At the back of the book a large range of painters' supplies, brushes, easels, fancy lines, etc., are described with illustrations. This season's catalogue is especially attractive and will be sent to the trade on request by mentioning this paper.

Booklet on Ventilation.

"Ventilation" is the title of an attractive booklet describing the Patent Cane Rotary Ventilator, manufactured by G. D. Pearson & Co., Montreal. The book contains much information about their product and a number of cuts show the different sizes. Testimonials are also reproduced in the book and as they originate from well known Canadian firms who are using the Pearson system, they will be found of interest to the trade. The book will be mailed free on request by mentioning this paper.

A Paint Catechism

By G. B. Heckel.

Summary.

From the foregoing it will be seen that paint manufacture is a progressive industry, dependent for success upon the knowledge and skill at the command of the manufacturer. The constant addition of new pigments and other materials to the list of available products and the keen competition between manufacturers insures progress. Sixty or seventy years ago there was but one white pigment generally available as a paint base. This was the carbonate of lead. The fact that its use precluded the use of many beautiful tinting colors, its well recognized sanitary conveniences and its deficient durability, led not only to improvements in its handling and application, but also to its very general extension with inert pigments and to a diligent search for other white bases. This research has given us oxide of zinc, sublimed white lead, zinc-lead, white and lithopone—all white pigments of great importance to the paint-consuming public. The field of paint production has thus been vastly extended, and the manufacturer has it within his power to vary his paint base as the conditions of use and the chemical nature of his tinting colors require.

The history of oxide of zinc in this connection is familiar. Since the middle of the last century its consumption has grown from nothing to something like 70,000 tons annually in the U.S. alone. The history of sublimed lead is another less familiar instance. The important and rapidly growing use of this pigment as one of the raw materials depended upon by the paint manufacturer for prepared paint is an excellent illustration of the advantages to the public at large resulting from the development of the paint industry, for the reason that sublimed white lead would probably not be in use to-day at all as a pigment, if its use had depended upon its being able to replace corroded lead in hand mixing while, on the other hand, the paint manufacturer has been able to give the public the very real values and advantages of this pigment in the can of paint.

White lead—that is the ordinary hydro-carbonate—owing to the long-continued use of the term to describe all kinds of white paints in paste form, has acquired an undue importance in the popular mind. While an extremely useful and valuable pigment, it is only one of the many, and in a large proportion of the dark shades commonly used neither it nor any of the other white bases (excepting the inert pigments) has any place whatever. Furthermore, as has been shown, it is absolutely misplaced and injurious in many of the popular tints produced from chemical colors—the greens, blues, yellows, pinks, lavenders, salmons, delicate grays, etc., to cite only a few examples. In these cases and many others the tint

Have You Got It?

The Western Wire and Nail Co., Limited, - London, Ont.

can be safely produced only with zinc oxide, sublimed white lead, zinc-lead or some similarly inactive white base. Even when white lead can be safely used, either by itself or in combination with the "limited palette" recommended by lead manufacturers, expert testimony strongly inclines to the opinion that its value for painting requirements is considerably enhanced by the addition of other white pigments and inert materials.

In the present state of our knowledge it is absolutely impossible to assert with authority that any given formula is "the best.' We can say, however, that many formulas in common use are excellent and that it is surprising that from so great a variety we should obtain results so nearly identical. As before stated, the "best paint" is that which produces the most uniformly satisfactory results—for paint is bought to produce results, not to demonstrate technical theories.

In conclusion let us bodly and confidently asert that prepared paints are the sum of paint progress; that the hand of progress moves forward and not backward on the dial; and that the American people having once realized the economy, convenience and common sense of the sealed can with its completed product will not voluntarily return to the paint pot and paddle.

(The End.)

Paint and Oil Markets

MONTREAL.

Montreal, Feb. 11.—Trade improved somewhat last week, despite the continuance of the unfavorable weather. The advent of spring is beginning to assert itself, and the orders are coming in more freely. The volume, as yet, is not large, but is encouraging. There has been no change in prices, and the market situation is dull. Turpentine and ground white lead are showing firmness under a quiet demand.

Turpentine—This article continues dull with no change of prices in the primary markets. Stocks in the South are small, so that a renewal of business will probably send prices up. We quote: Single barrels, 75c; wood distilled turpentine, pure, 69c.

Linseed Oil—The market is unchanged as regards prices, but the undertone is very firm. There is not much business doing, and shipments are still on the light side. We continue to quote: Raw, 1 to 4 barrels, 57c; 5 to 9 barrels, 56c; boiled, 1 to 4 barrels, 60c; 5 to 9, 59c.

Ground White Lead—This article is still a leading seller, and a steady trade has been done. The effect of this has been to impart a strengthening tone to the market, and although prices have not yet been advanced by manufacturers, the outlook seems to point that way. We continue to quote: Government Standard, $6.25; No. 1, $6.

Red Lead—This article continues firm, and is in somewhat better demand. We quote: Genuine red lead, in casks, $5.75; in 100-lb. kegs, $6; in less quantities at $6.75 per 100 lb.s No. 1 red lead, casks, $5.50; kegs, $5.75, and smaller quantities, $6.50.

Dry White Zinc—Dry white zinc is without change. Supplies are still light but there is no strength to the demand. Prices are: V.M. Red Seal, 7½; Red Seal, 7c; French V.M., 6c; Lehigh, 5c.

White Zinc Ground in Oil—Prices are maintained, and although the demand is quiet, there is a firm tone to the market. We quote: Pure, 8½; No. 1, 7c; No. 2, 5¾c.

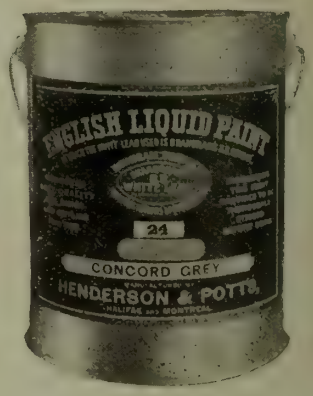
Varnishes—There is little to note with regard to varnishes. The demand may be a little heavier, but on the whole, the situation is dull.

Putty—The market is very quiet. The demand shows a little improvement but not enough to make grinders work at full time. We quote: Pure linseed oil putty, bulk, in 800-lb. casks, $1.75; in 25-lb. iron drums, $2.05; in 25-lb. tins (3 in a case), $2.15; bladder putty, in barrels, $1.95.

TORONTO.

Toronto, Feb. 18.—Business has recovered from the inactivity caused by the weather conditions which tied up the railroads two weeks ago. Though orders for immediate use are still few and small, a good booking business has developed for future delivery. The conditions governing the elementary products of the market remain firm. Stocks in some centres are reported low and no change of note has occurred since last writing.

Turpentine—The market in the Southern States is unsettled and it is impossible to say for any time in advance what changes may take place. The demand having been for limited quantities only for some time seems to indicate that buyers are holding back for better prices. The supply on hand at southern points is gradually diminishing. We still quote single barrels, 75c; 2 to 4 barrels, 74c. Less than barrels, add 5c per gallon.



Linseed Oil—Linseed oil remains stationary, the English price indicating firmness. The demand up to the present is not quite equal to that of last year and the large jobbing houses have not placed many orders for future delivery but if the present prices are maintained in Great Britain when we get nearer to the spring trade and there is a demand for oil for actual use prices may likely advance. The supply on the local market at this time, while amply sufficient for immediate needs, is not sufficient for any demand. Prices for the week are unchanged. We quote: Single barrels, 60c; 2 to 3 barrels, 59c; 4 to 9 barrels, 58c. Add 3c to this for boiled oil, f.o.b. Toronto, Hamilton, London,

Stevens-Hepner Company

Port Elgin, Ontario

Guelph and Montreal. Terms, net, 30 days.

White Lead—An increasing demand exists for this commodity and the prices are being firmly maintained. Stocks in the city are low at present and a change in prices does not seem probable for the near future. Booking for spring delivery has been started and orders coming in at present are satisfactory to local jobbers. We again quote : Genuine white lead, $6.25; No. 1, $6.

Red Lead—The demand is on the increase at present and a change is predicted in the near future. Some cutting has been indulged in during the week but to date prices generally have been maintained. We quote : Genuine, in 100-lb. kegs, $6; genuine, in 560-lb. casks, at $5.50; No. 1, $5.

Petroleum—An average demand exists at present and prices are unchanged. Pratt's astral, 17½c; water white, 15c, and prime white, 13½c.

Glass and Putty—The demand is rapidly picking up and spring booking for these goods has received an important start. Prices of putty remain : Bladders, $1.95 per 100 lbs., less than barrels, $2.10 per 100 lbs.

Shellac—Prices are steady and the demand is slack. Prices remain : Pure white, in 5-gallon lots, $2.25; pure orange, $2, and No. 1 orange, $1.90.

Varnish—The demand is slow but prices remain firm. Quotations are as follows : No. 1 furniture, in barrels, 65c; elastic oak in barrels, $1.25; light hard oak, in barrels, $1.05.

PAINTS IN PASTE FORM.

A new departure of the Paint Manufacturers' Association, which, if successful, will soon be adopted by Canadian manufacturers, is the preparation of what are known as base paints, or paints put up in the form of pastes for the use of master painters.

This method of handling paints is new, economical, and handy, and will probably do much to change the present custom of numbers of master painters, who mix all their own paints. The Paint, Oil and Drug Review says in a recent issue :

"Composite base paints will be put up full measure in convenient packages. They are designed expressly for the master painter and to insure economy and durability they must be prepared, to meet each condition, by a man with a practical knowledge of painting requirements.

"The Century Dictionary defines the word 'composite' : 'Made up of distinct parts or elements ; compounded ; especially, so combined as to manifest a diversity of origin or make-up.' 'Made of parts so combined as to lose their distinctive characters.'

"They are not what were heretofore known as paste or semi-paste paints, but are paints made by the expert for the expert—for the master—ready for his skilled manipulation and because they avoid the necessity of 'breaking up' are eminently suited to fulfil the largest proportion of his needs. Economical for him because they eliminate many of the expensive troubles to which his shop is heir and not antagonistic to his best interests because they demand the master's touch before they become finished products. The possibilities in the manipulation of composite base paints are practically unlimited."

To quote further :

"The use of dryers has been avoided in the production of composite base paints because these paints are for the exclusive use of the master painter; and because of the varied conditions which he must constantly meet in his work it has seemed best to put the question of dryer entirely up to him.

"The master will at once recognize the possible economies to be obtained by producing tints from colors and bases of such consistency.

"The manufacturer with his powerful machinery having done the 'breaking up,' it but remains for the master with his expert workman to produce by the simple process of intermixing that practically unlimited variety of shades and tints which must ever come within the province of his art.

"Practical tests have demonstrated that, contrary to all past experience, the colors and whites as now submitted, can be intermixed one with the other, in given proportions, to produce the desired standard tints and the same tints reproduced from time to time as required by observing the same proportions of the respective colors.

"It is not claimed on the part of this association that these tints can be so exactly reproduced that simply weighing or measuring out specified quantities of the various ingredients and mixing them together, will reproduce the exact tint desired ; but it is a fact that each tint can be duplicated so nearly that the master painter finds himself in exactly the position of the manufacturer, who reproduces certain colors of paint by using an exact formula, but who always finds himself forced to 'tone up' or 'let down' on account of weather or other local conditions which, however, are of but slight consequence and cause little or no inconvenience or waste.

"It will be readily recognized that this characteristic of composite base paints makes them immediately economical and valuable to the master."

CHANGE IN PACKING PAINTS.

The Sherwin-Williams Paint Co. announce a change in the manner of putting up paint in paste forms which will be of interest to the trade in Canada.

Heretofore all paste goods sold by the pound have been put up by this company in gross weight and the new schedule provides that all goods will hereafter be put up in net weight packages.

This step establishes a definite standard, regardless of shape, size or weight of package. It enables the consumer to know exactly how much material he is buying. This involves no actual increase in the cost of the goods to the consumer. The price in either case covers the contents of the package. The slightly increased cost of net-weight packages gives more material that can be used, not more tin can that must be thrown away.

It provides an accurate amount of material in various packages so that the master painter can make up any amount of material on a basis of the actual contents of a can. It prevents selling short-weight goods at reduced prices and taking advantage of large packages which deceive the purchaser as to the actual amount of the contents.

"VERONICA"

VERONICA COVERS WELL

The **VERONICA** is a soft rich green, of great covering power. It is very durable, and manufactured especially for Window Blinds, Shutters, Verandahs, Screen Doors, Engines, Agricultural Implements and all kinds of Wood and Metal Work. See that each package bears the name of **The Canada Paint Company, Limited.**

▪ ▪ ▪

VERONICA IS A TRADE MARK

The **VERONICA** Blind and Shutter Green is made only by **The Canada Paint Company, Limited,** of Montreal, Toronto and Winnipeg. The word **VERONICA** is copyrighted as a Trade Mark with the Department at Ottawa, Canada.

▪ ▪ ▪

VERONICA IS IN FOUR SHADES

The **VERONICA** Green is made in four shades, viz.:—Light, Middle, Deep and Extra Deep. Insist upon the **VERONICA,** as the undoubted superiority of this Green has led to imitations.

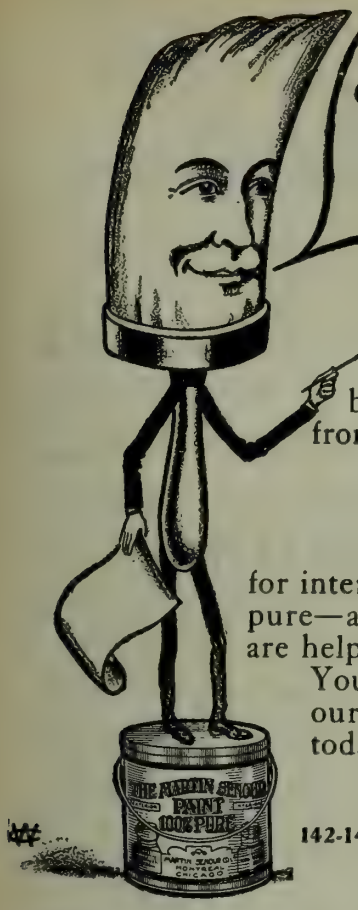
ALABASTINE

is the only Wall Coating which is extensively and persistently advertised to the general public and is what the people call for when they want anything in the line.

No persuasive argument is required from the dealer to sell it. People know its merits and ask for it because it is *ALABASTINE THEY WANT.*

A well-selected stock of *ALABASTINE* is "as good as the wheat," for repeat sales are invariably the rule once the customer uses it.

Our publicity campaign for 1908 is sure to more than double the already large trade for *ALABASTINE.*



Our illustrated Catalogue, *"HOMES, HEALTHFUL AND BEAUTIFUL,"* handsome Counter Show Cards, Cloth Banners, Tint Cards and other literature, which we supply liberally with every shipment of *ALABASTINE* help the dealer to create new trade.

The new two-sheet Poster showing an enlargement of the illustration of the Dining Room in *"HOMES, HEALTHFUL AND BEAUTIFUL,"* which we propose posting in large numbers on all the Bill Boards in Canada during the Housecleaning Season will be a *"SURE WINNER."*

To any dealer who will promise to display and distribute this advertising matter, we will be pleased to send a complete outfit, free of charge, express prepaid, on receipt of request for same.

Get ready to supply the large and growing demand of *ALABASTINE* by ordering a full assortment either direct or through your nearest Jobber and *DO IT NOW.*

The Alabastine Co., Limited, - Paris, Ont.

Let Us Advertise Your Store

There is nothing like good advertising as a tonic for business. We are persistent and painstaking advertisers. As soon as a dealer begins to handle **Martin-Senour Paint,** we begin advertising in his behalf. We make it decidedly to his interest to handle our goods, both from a profit-making and trade-building point of view.

WE HAVE PLANS

for interesting, discriminating paint buyers in **Martin-Senour Paint**—100 percent pure—and at the same time influencing their trade in your favor. These plans are helping others, and there is no reason why we cannot do as well for you. Your name and address on a postal card will open the way for us to explain our methods and show you how we can be mutually helpful. Write to us today.

Mistakes and Neglected Opportunities

MATERIALLY REDUCE THE PROFITS OF EVERY BUSINESS

Mistakes are sometimes excusable but there is no reason why you should not handle Paterson's Wire Edged Ready Roofing, Building Papers and Roofing Felts. A consumer who has once used Paterson's "Red Star" "Anchor" and "O.K." Brands won't take any other kind without a lot of coaxing, and that means loss of time and popularity to you.

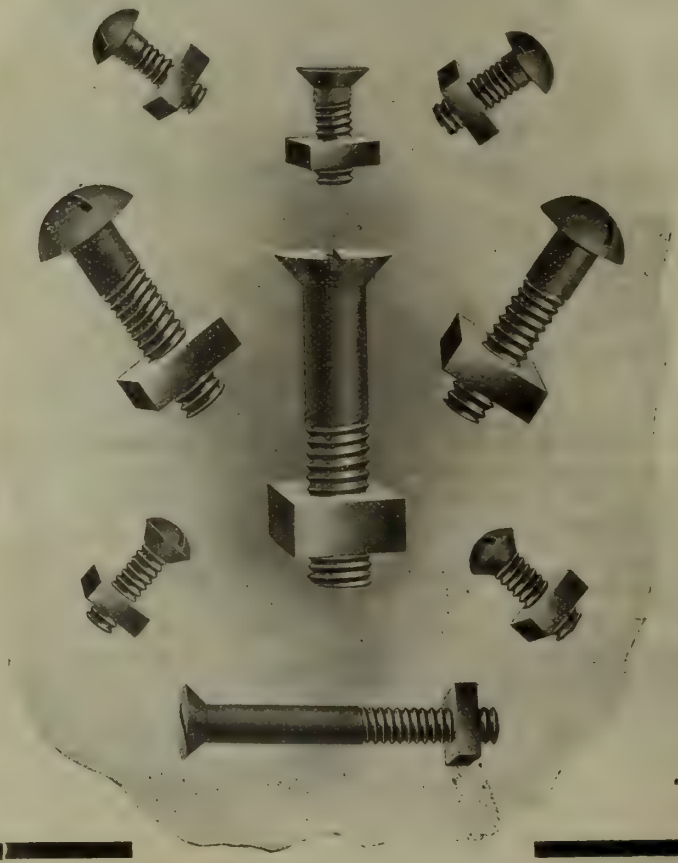
"Seeing is Believing"

¶ As the Ross Sporting Rifle represents the best in modern rifle manufacture, the highest grade materials and minute accuracy in workmanship, it is to your interest to learn fully about this Canadian Rifle—



¶ The Ross Straight Pull 303 Sporting Model M is one of our leaders to retail at $26. The barrel is the celebrated Ross high pressure, non-fouling, gun-barrel steel — The breech action is dependable.

Our representatives are now demonstrating the merits of this rifle—It places you under no obligation to drop us a line to make sure you will be on their calling list.

Our advertising policy is co-operative.

Something You Ought to Be Selling

The New Century method of washing has succeeded, not because of its ease, speed and simplicity only, but because it gives better results than are possible with any other method.

This machine has a wringer stand too, not a rickety affair, but a convenient, strong, rigid attachment, always in position, never in the way.

New Century Style "B"

The experience is in the machine. You'll hear no complaints of it and have no excuses to make.

They are the best there is.

Dealers, don't load up with experiments, it is a losing game

The Dowswell Mfg. Co., Ltd.

Hamilton, Ont.

W. L. HALDIMAND & SON, MONTREAL, Eastern Agents

Freezes two flavors of Ice Cream or an Ice or Sherbet and Ice Cream at one and same time, in one freezer.

SOMETHING ENTIRELY NEW —NEVER DONE BEFORE.

THE can is divided in two parts by a vertical partition. One flavor is placed in one, the other in opposite side of can, in each of which the scrapers, etc., operate. The can cannot be turned as in old style freezers, because of the partition. It is therefore swung to and fro by a rocking motion of the crank. This is a more comfortable and much easier movement. It is very much less tiresome than turning a crank. One can sit back in a chair with freezer alongside and rock the crank to and fro without discomfort or undue exertion and even read at same time. Although two flavors are frozen at once and with less exertion, no more time is required than in old style freezers.

The **Pails have electric welded wire hoops,** which are guaranteed not to break or fall off; Cans are of heavy tinplate with **drawn steel bottoms** that are guaranteed not to fall out or break and do not leak, the strongest and most durable Freezer Can made; the **Automatic Twin Scrapers** by their positive action insure perfect scraping of frozen particles from side of can. All inside parts are heavily coated with pure block tin, and outside parts all thoroughly galvanized.

SOLD BY LEADING JOBBERS

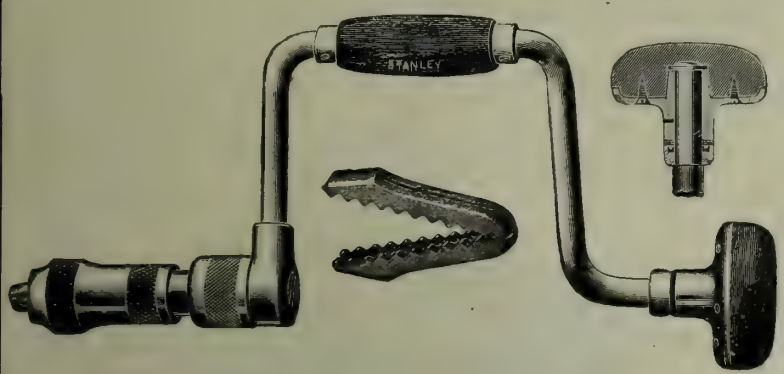
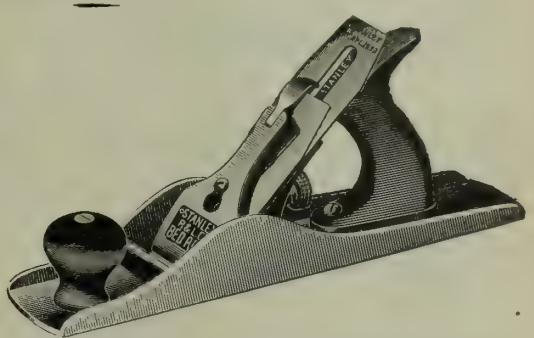
Tools it Pays to Sell



No. 37.—Stanley Metallic Level and Plumb. "V" bottom for use on shafting. In three sizes, 12, 18 and 24 in.



No. 9½.—Block Plane. The line of Stanley and Bailey block planes includes planes for every purpose and of every useable size.

No. 49.—Stanley Adjustable Auger Bit Gauge. Can be quickly attached to or removed from the bit. Its use will not bend the bits.

No. 921.—Stanley Concealed Rachet Braces. The most perfect braces on the market. Made in five sweeps, 6, 8, 10, 12 and 14 in.

Stanley "Bed Rock" Planes are the highest perfection in plane construction. They are made in all desirable sizes of smooth, jack, fore and jointer planes, plain or corrugated bottoms.

All the above tools are Stanley Tools. A new catalogue has just been issued, showing the complete line. We will send you one if you so desire.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines These enquiries come from Wholesalers, Manufacturers and Retail Dealers, who usually intimate they have looked through Hardware and Metal, but cannot find any firm advertising the line in question. In the majority of cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay them to advertise in larger space.

Are You Selling
EUREKA RAKES?

The advent of the Eureka Rake has set a new standard of strength for wooden hay-rakes. The handle and the braces of Eureka Rakes are sawn in *one piece*. This alone greatly adds to its strength. There is another point—the handle is firmly mortised to the head, instead of being stuck loosely through a hole. When a farmer sees the Eureka Rake he wants it. Can you supply him?

Send for List and Discounts.

Retail Hardware Association News

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding Association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

B.C. CONVENTION POSTPONED.

The conventions of the British Columbia Wholesale and Retail Hardware Associations have been postponed for about six weeks, and the gatherings are expected to be held at New Westminster during April.

NEW YORK STATE CONVENTION.

Treasurer John Caslor and Secretary Wrigley of the Ontario Retail Hardware and Stove Dealers' Association, attended the sixth annual convention of the New York State Retail Hardware Association at Buffalo last week, G. H. Clark, Niagara Falls, also attending one of the sessions. The convention lasted from Feb. 18 to 21, and about 300 prominent retailers from western New York were present, a particularly large delegation being present from Rochester in an effort to secure next year's convention for that city.

One of the largest halls in Buffalo was secured, the meetings being held in a small hall, while the body of the building was used for the exhibits of about 70 manufacturers and jobbers, the displays made being decidedly interesting to the delegates to the convention. Interviewed by the Canadian delegates, many of the exhibitors expressed a desire to have displays at the fourth annual convention of the Ontario association at Hamilton next year. Some fine souvenirs were distributed to the delegates by the exhibitors.

About 50 new members were enrolled at the convention, greater interest being taken in the organization each year. At this year's convention the chief visitors were S. R. Miles, president of the National Retail Hardware Association, and R. R. Williams, hardware editor of the Iron Age. Other visitors who spoke at the open meetings of the convention were, E. J. Cornish, president of the Carter White Lead Co., Chicago and Montreal; H. J. Fueller, Philadelphia, E. W. Heath, Chicago, and George F. Bradford, editor of "Hardware," New York. Extracts from the addresses of these gentlemen will be given in these columns in future issues.

A smoking concert on Wednesday night and a banquet on Thursday night were both largely attended, and a "Question Box" discussion on Friday morning was very interesting, though not nearly so much of a success as the same feature at the Ontario convention.

The big features of the convention itself, from a visitor's standpoint, were the addresses of National President Miles, and R. R. Williams, Mr. Bradford also making a practical suggestion as to how to fight the parcels post question to best advantage, he urging the establishment of a central news bureau to gather information as supply matter for publication in the country papers, pointing out the ill effects of parcels post legislation upon farmers and property owners in the country towns and farm districts.

Mr. Miles' address also dealt chiefly with the parcels post question, outlining the various reasons why retailers should be alive to support every organized effort to counteract the influence of the catalogue houses. "How many of you use the mail order catalogues when buying your goods?" asked Mr. Miles. Very few hands went up, so the speaker urged that all dealers study the catalogues before buying from travelers, and if the prices quoted by jobbers and manufacturers were too high to allow successful competition with the department store prices, don't buy from the salesman. "It isn't the catalogue houses that keep the jobbers and manufacturers going," said Mr. Miles. "The catalogue houses only buy surplus stocks and if the retailers stand together they can soon stop the mail order concerns from cutting prices on any lines sold through the regular trade."

Mr. Williams gave an encouraging address on the value of national, state, and local organization, the real rock upon which success can be built being the getting together of competitors in their own towns. The state conventions get the trade together and are helpful in many ways, but the real practical work of overcoming the many existing small annoyances must be done by the dealers in each town realizing that it is more profitable for them to work together than to be eternally fighting each other and drinking in all the lies told about their near-by competitors.

D. BROCKLEBANK, ARTHUR.
Elected First Vice-President of the Ontario Association for the Coming Year.

The Ontario delegates to the Buffalo convention returned with many helpful ideas, which will be passed on to the executive committee at its next meeting in April.

DO NOT SELL BLACKSMITHS.

One of the questions discussed at the recent convention at Toronto dealt with the sale of horsenails, and as the Capewell Horse Nail Co., Toronto, recently added the sale or horseshoes to their line they feel that reference may have been made to them in the discussion. They state that they have not, do not, and have no intention to sell to any buyers outside the hardware trade, except sales to blacksmiths for which credit is given to some dealer. Any member of the association knowing of sales out of keeping with this rule is requested to send a complaint to the company or the secretary of the association.

WINNING CONFIDENCE.

"Your association seems to be on a sound foundation now," said the manager of a large Toronto house selling to the hardware trade a few days ago. "The men who attended the convention this year were a creditable lot of men of good financial standing. The association ought to be a power for the good of all branches of the trade if it keeps on gaining strength."

General approval seems to have followed the decision to keep the organization exclusively for retailers, the travelers themselves being amongst those who freely express their approval of the decision. "It was one of the best things your association ever done," said a representative of one of the Toronto jobbing houses last week.

A criticism has been heard of the smallness of the comvention hall, but as the attendance this year was nearly twice as large as on any previous occasion, it will be seen that provision was made for a larger gathering. Next year an even larger hall will, of course, have to be secured, as the attendance at Hamilton should be larger than at the 1908 convention.

PARCELS POST AGAIN.

That the mail order house influences are determined to keep on agitating for a parcels post c.o.d. law in Canada is evident by the numerous articles appearing in Canadian daily papers reproduced from the departmental store owned papers in the United States.

It seems probable that another effort will be made next winter to establish new parcels post regulations, so it is necessary to strengthen the association of merchants in order that intelligent action can be taken to protect their interests.

ANOTHER MERCHANT PLEASED.

J. Rothaermal & Son, Milverton, write: "We are in receipt of your letter containing a cheque for $2.87 from one of our customers, for which accept our thanks. We had some debts in our books which we considered lost. We tried everything from threatening suit to making drafts on them, and all failed. Then we sent them the association collection letter No. 1, and in a couple of days they came and paid up. Too much cannot be said in favor of them. Wishing the association every success."

MUTUAL INSURANCE PROFITABLE

At the last quarterly meeting of the Retail Hardware Mutual Fire Insurance Company of Minnesota, the directors announced that the return premium or dividend for 1908 would be 50 per cent. This is a noteworthy event in the history of hardware mutual insurance companies, as it is the first time the return premium has been so large as to effect a net saving to the policy holder of one-half the premium paid. The Minnesota company, of which M. S. Matthews, Minneapolis, is secretary, is the oldest of the hardware mutuals, and has now been in operation for a period of eight years. At the close of the first year the directors felt justified in returning to the policy holders 25 per cent. of the premium paid. Since that time there has been no diminution in the size of the dividend returned, but in most years an increase of 5 per cent. The officers of the company naturally feel elated over the result of their economical and efficient administration, and are entitled to congratulations. The company's total insurance in force on November 23 amounted to $5,890,706.

CARTAGE CHARGES INCREASED.

It is announced that on March 1st Canadian railways will increase the cartage charge on the delivery of consignments of freight from one and a half to two cents per hundred pounds. This increase has been rendered necessary, the railways say, by the enhanced cost of delivery due to the greater cost of wages, keep of horses, and other expenses, which have led the big delivery companies to increase their charges to the railways. G. M. Bosworth, of the C.P.R., states that the increase will not meet the amount charged the railways by the cartage companies, which is well in excess of two cents per hundred pounds.

It is now up to the Railway Commission to take up the whole question of cartage charges and adopt some more equitable plan than now prevails, the result of which is to charge cartage at both shipping and receiving ends to the retailers. The retail hardwaremen of Ontario consider the present arrangement a decided injustice, as cartage and boxing charges in the United States are included in the cost of the goods. They are, therefore, likely to be anything but pleased with the additional charge now to be imposed upon them by the railway companies.

NOW A GOVERNMENT MEASURE.

(From our Special Ottawa Correspondent.)

Ottawa, Feb. 27.—Mention was made a week or two ago that the Government was in doubt whether it would be able to carry out its promise made last year to assume charge of Mr. Monk's bill respecting Co-operation. Many of the measures mentioned in the speech from the throne are still to be submitted to Parliament, and it was thought that for this reason the Co-operation Bill would have to go over. As there does not seem to be any likelihood of Parliament concluding its labors until well on in the summer the Cabinet decided at its meeting on Monday to support Mr. Monk's bill, and, accordingly, on motion of Sir Wilfrid Laurier, the measure was transferred from "Public Bills and Orders" in the hands of private members, to "Government Orders," so that whatever the future course of business may be in the Commons as regards public bills in the hands of private members, this particular measure will have precedence with other legislation proposed by the Government. The bill will be in charge of Mr. Lemieux in the House. The Minister of Labor informed me to-day that the measure, as introduced by Mr. Monk, would be accepted by the Government, except that he would have two or three amendments of a minor character to suggest. These have not yet been drafted, but will probably, among other things, provide for the furnishing of annual returns by co-operative societies organized under the Act, to the Department of Labor, and also making the books of any such society subject to inspection at any time by a Government officer.

What to Do Next Month

The merchant who wants to be well placed on the jobbers' shipping list should waste no time now in sending in his orders. There are signs indicating that the rush may at any moment commence, and the man who waits until the last minute runs the danger of experiencing a delay that may prove serious, not only financially, but in loss of repute as a progressive retailer, "Be ready with the times" is the motto that all should adopt, and then less grumbling would be heard as to the slowness of this or that wholesaler in despatching goods, or as to the ineffective transportation facilities of the railways. Trade has opened slowly, and some manufacturers are many carloads behind their total at this time last year. The result is easy to foresee. Presuming that the demand reaches normal proportions before many weeks are out—and there is every reason to believe that this will be the case—there will be a very heavy strain, not only on the productive powers of the factories, but upon their shipping, as well. This will affect the jobbers, who, in the best of circumstances, never have much time to lose, and through them the merchants. Thus there is the prospect of an unusually heavy stagnation in delivery in all directions, and the merchant is wise who this year places his orders somewhat in advance of his usual time.

* * *

All the worry of stock-taking is now over. The merchant knows exactly how his stock stands, what lines sold best, and what lines carried the most profit. He is in a good position to order, and to order wisely, the mistakes of last year acting as a safeguard against any being committed in the same direction again. In filling stock again, the hardwareman must not forget to take into account the growth of his district. The increase in trade that a store may have experienced—even though it holds a monopoly—is not an exact gauge, by any means, of the development going round, or a criterion of the amount of trade which can be extracted from that development. Probably many families have become residents, who, for the time being, were fully stocked with hardware and their demand has not yet begun to make its appearance. The dealer should make a careful review of his field of operations, should consider thoroughly the various points of the situation, and then there would be less likelihood of rush repeat orders being necessary. For instance, the hardwareman who only orders the same number of wringers he sold last year, in spite of the fact that the growth of the district has been proportionately greater than in the previous year, shows a want of business acumen of which his local rival, or the mail order house, may reap the advantage. Make a study of the prospects in the district, and let the buying, to some extent, be guided by the result.

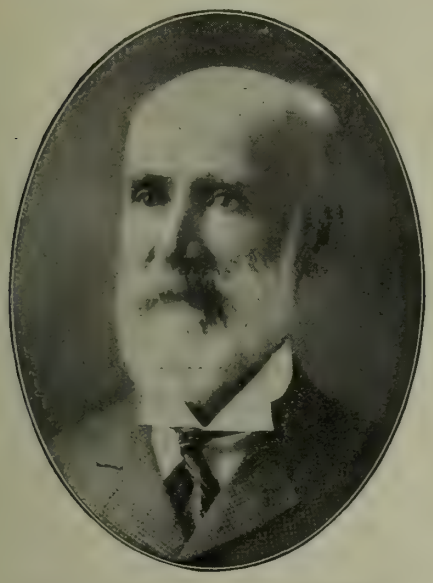
* * *

By this time the merchant should have decided upon the spring and early summer goods he intends to order. House-cleaning utensils, wire netting, refrigerators, ice tongs, garden tools, screen doors, polishes, sporting goods, hammocks, paints and varnishes may be classed among the imported lines to be carried. A hard and fast rule of advice cannot be laid down, and each merchant finds that his trade presents some characteristic that is lacking in another.

* * *

March is a good time to have the store cleaned up and made bright for the spring trade. It is astonishing the decorative effect that a few tins of paint will produce. Discolored walls can be made pleasing, dirty ceilings whitened, silent-salesmen polished, drawers and shelves revarnished, new price tickets prepared to replace those that have done duty so long, and everything made to look as pleasing as possible. Now is the time, too, to make any interior alteration that the exigencies of the trade demands. Labor is cheap, and the work can be done more thoroughly than when the carpenters are hurrying through one contract in order to carry out another. While the men are there, do not neglect the exterior of the store. A handsome outside appearance is a good advertisement. It is an effective frame to a window display, and attracts the attention of the passerby. It can thus be seen that the merchant can give himself plenty to do while waiting for the spring to open, and can conduce, by efforts rightly applied, greatly to the success of his business.

When others fail, it is your opportunity to make good.



The Empress of India, which sailed this week for the Orient, had on board among other things, 300 tons of pig lead from the smelter at Trail for Yokohama and Shanghai, and two carloads of machinery. This latter was also mostly of Canadian manufacture.

THE LATE JOHN CAMERON

An Appreciation of a Faithful and Old Employe of the MacLean Publishing Company.

By W. L. Edmonds, General Manager

John Cameron, who for twenty years was on the advertising and subscription staffs of the MacLean Publishing Company, died at his home, Durham, Ont.,

THE LATE JOHN CAMERON.

on Monday, February 24. He was 76 years of age.

Mr. Cameron was well-known by the business men of Canada, and particularly by those in Ontario, to which province his territory had been chiefly confined during the last few years. During the twenty years of his service

The Late John Cameron in His West India Garb.

he not only several times covered Canada from ocean to ocean soliciting subscriptions for the MacLean trade newspapers, but he visited Great Britain and the West Indies with the same end in view. His trip to the West Indies was taken three years ago. His health was failing at the time and the company insisted that he make the journey. He would only go, however, on condition he was permitted to solicit subscriptions. He not only visited the principal islands, but spent some time in British Guiana on the mainland. How thorough his work was may be gathered from the fact that before he was away a month he sent a rush order for more subscription blanks. The supply he had taken with him was exhausted.

The Late John Cameron When in Scotland in the Interest of the MacLean Trade Papers.

This was typical of the man. He could not rest. His heart was in his work up to the very last. Work was as breath to his body. Last winter the company wished to send him to Florida for a rest. "What is the use of my going there," he remarked to the writer when the subject was broached. "I'm afraid I won't be able to get many subscriptions there." And because he did not think Florida was a good subscription field he would not go there for his health. He simply could not be induced to take a rest for purely rest's sake. Five years ago the company proposed to retire him on full pay, but he scorned the idea.

Mr. Cameron was a persistent as well as a hard worker. He had faith in the MacLean's trade papers and firmly believed it was in the best interests of the retailers that they should read them and that manufacturers and wholesalers should advertise in their columns. He was nothing short of an enthusiast in this respect. In his quiet, pleasant and unostentatious way he would never let up when he thought a man should either be an advertiser or a subscriber until he had obtained his signature to an order. Some years ago there was a business man in a certain town whom he had all day been unable to see. He had to leave by early train next morning and so after ten o'clock at night he located the merchant's private house. The place was in darkness. Nothing daunted he vigorously rang the bell. The merchant stuck his head out of the window and enquired who was there. "It's the representative of The Canadian Grocer," replied Mr. Cameron, "and I want your subscription." And he got it.

Mr. Cameron was one of the most likeable of men. He was as true as steel. No one can remember him saying an unkind word of anyone. He was always looking at the best side of people, not at their worst. Those who knew him loved him. He did not blow hot one day and cold the next. He was always the same. The MacLean Publishing Company will miss him, not only as a valued and trusted employe, but what is more valuable still, also as a trusted and tried friend.

Deceased was unwell the greater part of last year. He spent the summer in Muskoka, but in September he insisted on again taking the road in quest of advertising, but was only out a few days when he had to give up and return to his home in Durham. A few weeks ago he was stricken with paralysis from which he never rallied. His remains were interred in Durham on February 27

ADVERTISING HOLD-UPS.

One of the topics discussed at the New York Retail Hardware Association convention at Buffalo last week was that of merchants being held up to advertise in church and concert programs and similar questionable productions too familiar to all readers of this paper. As in Ontario the retailers of New York State have been forced to call a halt on this wasteful expenditure, the only remedy for which is united action on the part of all the retailers in every town and a decision to refuse to buy tickets or place advertising in anything but legitimate publications, confining all charitable contributions to their proper place. If the retailers of a town are not organized into a local merchants' association or board of trade steps should be taken to get them together to deal with this question and other local problems, such as the regulation of peddlars' licenses, early closing, etc.

Retailers who object to being held up on fake advertising schemes in their own town should be above holding up jobbers or manufacturers for space on programs or souvenir books gotten out under the auspices of merchants' associations. The Ontario Retail Hardware Association has on more than one occasion refused to accept contributions of this kind and the New York State Association at the convention at Buffalo took the same high stand, issuing a neat printed program without an advertisement of any kind. Payment was accepted for spaces at the trade exhibition in the convention hall, but in this case full value was given and the exhibitors expressed themselves as being well satisfied to spend money to make displays, although they objected to paying for ads. in programs or similar printed matter.

Two examples of what ought not be are on the editor's desk. One is a "hand-book" issued by the Retail Merchants' Association of Canada, loaded to the hilt with ads. from which the results to jobbers and manufacturers will not be a fraction of the expenditure. It is a straight hold-up made by an association which urges its members to refuse to be held up on local schemes. The second is a "souvenir" issued by the Michigan Retail Hardware Association, containing a convention program and a large number of expensive advertisements, the results from which are certain to be infinitesimal.

Still another objectionable "hold up" is that made by some jobbers upon manufacturers when catalogues or other printed matter is being published. One large jobbing house publishes a monthly house organ containing advertisements from manufacturing concerns the jobber buys from; some of the advertising appearing in no other publication, trade or general. As the manufacturers sell their goods to other jobbers the "donation" to the house publishing the house organ is an unfair discrimination against jobbers who are above asking for such special privileges. Another well-known jobbing house recently published a new catalogue and boasted of having made money out of it instead of the book having cost them money. Here again an unfair discrimination was made by manufacturers who contributed cash and illustrations to one customer for a new catalogue, while only contributing cuts to other jobbers who refuse to accept more when issuing their catalogues. This subject was discussed by the American hardware manufacturers and jobbers at Atlantic City last fall and it was decided to discourage all such "advertising expenditures."

Too often business men who ought to know better condemn advertising as unnecessary, their experience having been gained in such questionable schemes as programs, billboards, handbooks or catalogues. They throw away money which could be spent to good advantage in a selected list of publications reaching the men who handle the product of their factories or the lines stored in their warehouses. The ads. could be written to so instruct the retail salesman that he would know all about the article he is selling and so familiarize himself with it that he will not want to sell any other. And if the advertising is done in times of prosperity, when money is plentiful, the hold on the trade will be so strengthened that new competitors entering the market or offering cut prices on special lots will find it hard to make headway.

Advertising is not given a fair test unless it is done intelligently, with copy carefully prepared and the ads. placed in carefully chosen papers reaching the class of men who buy the goods the advertiser has to sell.

BEST GOODS MOST PROFITABLE.

That it pays best to talk quality has been the experience of most successful merchants, and it is emphasized by a story told of a Western Ontario hardwareman by one of Canada's most successful saw manufacturers.

Meeting a customer recently to whom he knew an unusual number of high-grade saws were being shipped, he asked if building was active in his town. The reply was that only the average amount of construction work was being done. Further conversation developed the fact that the sales of high-grade saws were not being made to carpenters at all, but to farmers who had been educated up to buying the higher priced lines by the hardwaremen's talks on quality.

The incident illustrates the wisdom of always trying to sell the best class of goods on which the longest profit can be made. Too many dealers follow the line of least resistance, and, taking it for granted that the farmer wants cheap goods, makes no effort to sell him the more expensive grades of tools, of scales, stoves or similar articles.

The best is the cheapest in the long run and by selling the best the merchant not only makes a satisfied customer, but secures the largest amount of profit with the least effort. One sale of high-grade goods at a good profit takes less time and is better for the merchant than a dozen sales of cheaper goods on which the margin of profit is small.

"The memory of quality will remain long after the price is forgotten."

METALS SINCE NEW YEAR'S.

Taking a review of the movement in metals during January and February, it cannot be said that the result shows any great indications of the approach of stability to the markets. On several occasions since the first of the year the situation seemed to be shaping itself towards a permanent restoration of strength, but subsequent events falsified hopes, and confidence can no more be placed in the markets now than when prices rallied after the great decline of 1907. The only advantage we have at present is that two months of slack buying have elapsed, and the date at which buyers must come into the market freely is to this extent correspondingly nearer, although at present the disposition to hold off seems to be as strong as ever. Buying from hand to mouth, and only completing those orders which must be attended to, may keep the factory going, but it certainly will not bring about stability to the markets. It is possible that in the end users will wish that they had shown less hesitancy in buying, as in the case of many who are now paying the increased cost of steel from stocks because they held off purchasing from the mills in the hopes of coming in on the lowest price.

Comparing the opening and closing prices of metals for the two months of January and February, only two metals close at a higher price than that which obtained at the commencement of the year. Tin opened in January at £121, and closed at the end of the month at £124 5s., after going 30s. higher than this during the four weeks. With the quotation we give in this issue of tin at £130 10s., there is a decided gain in both months. Those who have followed the markets know that this favorable comparison does not mean that tin has been steadily strengthening all the time. The market has been as fickle as the rest of the others, but taking the average there has undoubtedly been an improvement, and with present stocks light there seems to be some hope of the continuance of this better state of things.

Spelter is the other metal which has gained upon the opening of the price of the year. Commencing at £19 7s. 6d., London, and $4.20, St. Louis, spelter closed at the end of the month £20 10s. and $4.60 respectively. Taking the figures now at £21 7s. 6d. and at $4.75, a steady gain is shown. Spelter has made the most consistent advance, and although it has suffered a slight reaction this week on the previous one, the metal seems to be making the greatest progress of any towards stability.

Copper and lead have been distinctly disappointing, although the former metal is closing firmer than at one time seemed possible. Taking the New York opening price of copper at $13.50 and £61 10s. London, there is a distinct loss of ground with the present quoted prices of $13 and £57 17s. 6d. The closing price at the end of January was $13.60 and £61 2s. 6d. Copper undoubtedly has been most disappointing. Reviewing at the commencement of the year under a heavy export trade it was hoped that the demand would become stimulated in time to off-set any falling off in this eastward bound tonnage. But when Europe became glutted there was still no domestic demand, and prices have suffered in consequence. At the present time of writing there seems to be brighter prospects in store for copper but it would be wise not to place too much reliance on them.

Lead has gone the way of copper. Opening at £14 12s. 6d. it is now at £14, although it has reached a point £1 higher. This metal is most unstable, and although it is unquestionably cheap at the ruling price, there has been no stimulation to the demand.

Taking everything, therefore, into consideration, the markets cannot be said to have made the progress which the rally round the commencement of the year gave promise. Speculative interests have bulled and beared the markets, but the sturdy demand upon which the stability of the markets rest has been most conspicuous by its absence. Wo do not mean to say that there has been no improvement in the demand from time to time there have been encouraging signs given of developing trade, but the improvement has not been of the strength that present conditions should warrant, and certainly not of the strength to bring stability to the markets generally.

BENEFITS OF FRENCH TREATY.

The new Franco-Canadian treaty, whose conditions were given in detail in these pages some weeks ago, has been discussed at considerable length in the House of Comons during the last couple of weeks. While some points seem to afford possibility of disadvantage to Canadian trade, a careful study of the discussion and the schedules of the treaty seems to show that, taken as a whole, the treaty will be decidedly beneficial to Canadian interests. All in all, Messrs. Fielding and Brodeur are to be complimented on the success of their negotiations.

Mr. Zimmerman, of Hamilton, brought out a couple of striking instances of benefit last Friday when he mentioned that as a result of the new treaty the International Harvester Company had practically decided to manufacture the whole of the machinery for their export trade, now amounting to over $2,000,000 annually, in Canada, and again, when he told of being assured by a prominent pork packer that the new treaty would probably result in restoring the large canned meat trade which Canada enjoyed with France some years ago.

The treaty seems to offer rather a material discouragement to Canadian wine growers, as has been strongly represented by the trade, and it seems that it might be advisable in this connection to advocate a bounty for the production of Canadian wines of certain standards. This matter is one which might well be considered.

A PRACTICAL SUGGESTION.

Discussing the working of heating plants during severe weather conditions the Metal Worker points out that the heating contractor may use good judgment and install an amply large heating system, but he cannot escape, any more than his less capable and conscientious competitor, the many who know little how to run a fire to get the best results in severe weather.

People are apt to reach the conclusion that they have a good fire when the surface of the fire shows red hot coals, though they should have the firepot full of burning coals from the grate level to the fire door, and not half full of ashes, as is frequently the case. The excessively economical think they are practicing their hobby when they put a little coal on the fire very often.

While it may not be justly a part of the duties of the heating contractor to look into the service rendered by his equipment, he will strengthen his standing if during severe weather he looks up his customers and sees how they are getting along, and instructs either the caretaker or the servants, as well as the head of the house, as to the proper way to run the fire to get the best results when even the zero mark is lost sight of by the mercury.

THE SITUATION IN THE WEST

The Western Viewpoint by our Special Winnipeg Correspondent.

The bill amending the charter of the Winnipeg Grain and Produce Exchange has passed the House and now the members of the Exchange are trying to find out where they are at. As soon as the bill is assented to it becomes law and all private rights of the members in the trading room and the quotations posted therein cease. The Exchange has made no official statement in the matter as yet, one general meeting has been held for the purpose of obtaining the views of the members but nothing has been given out for the public.

The effect on business is very apparent already. New York brokers with big connections in the West are anxious to close out open trades fearing they know not what as rumors have been strong in New York that the price of the seats has dropped from $2500 to $1,000. As a matter of fact a seat that was bought at $2,500 was sold last week for $1,600, though this is the only one that has been traced so far. It is worthy of note that the Hon. R. P. Roblin, before bringing forward this confiscatory legislation took the precaution to sell his seat. The price received it is understood was $2,700. The business of one house from the south; namely, Chicago, New York and Minneapolis, which has been heavy for months, running from 500,000 to 1,000,000 bushels a week has dropped off to less than 10,000 bushels in two days. There is every indication that until something more definite is known of the effect of the bill that business in wheat will be seriously affected.

It is quite among the possibilities that the Exchange not being able to control the quotations may cease to post them and close the trading room. Judging from the talk of members in the trading room and round the pit this method is favored, as it would at once reduce the heavy expenditure which is almost valueless if it is to be the property of Tom, Dick and Harry. About all the farmers have accomplished is to eliminate the small commission men who certainly increased competition and to throw business more than ever into the hands of the big elevator concerns. For a time at least it looks as if there would be chaos in the grain trade, without any resulting benefits whatever.

* * *

The annual Bonspiel has drawn to a close and has been well attended. Retail merchants report that the Bonspiel trade has been excellent several of the larger houses declaring that it has been fully up to last year. As an indication of trade one of the large department stores, The Robinson Co., who make a practice of holding an opening for spring suits during the last week of the Bonspiel, report that they did a larger and better trade than they have ever done before, selling in one day 75 suits, ranging in value from $35 to $125, beside many spring coats.

This is a far cry from wheat but all these things tend to show the actual condition of trade.

* * *

Implement men are considering the outlook for spring. Collections have been pressed this year much more rigorously than ever before and large amounts of money have been gotten in, though there is still a large amount outstanding. Purchases were lighter than usual last spring in these lines, and while none of the implement houses seem keen on incurring heavy lines of credit, there is no doubt they are very keen on short date business and will go after it with a rush, once spring is opened.

* * *

Real estate business continues to show signs of revival though the inquiry is confined almost exclusively to inside properties with the exception of building lots near the new transcontinental railway yards in St. Boniface where practically a new town is springing up.

* * *

Preparations for new buildings are becoming quite active and among the number that will certainly be erected this season is a new elevator and linseed mill for The Manitoba Linseed Oil Mills Company, which will also be located in St. Boniface near the east end of the C.P.R. bridge over the Red River. The machinery has already arrived and the plant complete is expected to cost $75,000 and to be ready for the crop of 1908.

Returns from various bureaus for the purchase of seed grain for the Dominion Government show that it will be impossible to get all the seed oats required, even by importing them, indeed the bulk of oat seed wil have to be imported this year. There will not be much difficulty in getting sufficient wheat, though the price will be high, and the efforts of W. D. Matthews, of Toronto have materially assisted in the matter of a supply of really good seed barley.

During the week the Seed Grain Fair under the auspices of the agricultural societies of Manitoba, was held at the Agricultural College. For the purposes of this fair the province was divided into three districts, the northwestern, southwestern and eastern. The number of entries was very large and while not a few of the samples could not be scored owing to the presence of wild oats, there was an excellent display of very fine wheat. No man can compete who has not at least 50 bushels of the same kind of wheat which he can offer for sale. Many of the exhibitors had from 100 to 500 bushels for sale. It was worthy of note that the first prize and grain championship for Manitoba went to Thomas Thomson, of Roden, near Harding, in the northwestern part of the province, a section, by the way, that 20 years ago was supposed to be too frosty to raise wheat. Mr. Thomson is one of the men who went into the Dominion Association of farmers who raise registered seed, he has been working away for eight years and the sample offered for competition was one of the most perfect ever seen in this land of good wheat, being uniform in size and color and very plump and hard. Mr. Thomson was able to offer 300 bushels of this wheat for seed and the price was $2.50 per bushel and was eagerly sought for at that figure.

A great deal has been said from time to time about this growing of registered seed being a fad, but this looks like a very profitable fad. If country merchants were as enterprising as they ought to be they would never let such an opportunity go past their doors. What a splendid chance to advertise, "We keep the Thomson registered seed wheat" and handle it exclusively. Busy men like Mr. Thomson who have many other interests would no doubt be willing to sell in bulk to a merchant who was willing to take all the trouble off his hands. In this way the merchants would advertise their own business, he would encourage the purchase of good seed and in this way improve the crops of his district and indirectly the purchasing power of all the farmers who came to him for seed.

* * *

One of the interesting things in connection with the convention of representatives of agricultural societies, held at the same time as the seed fair, was the number of country merchants who were working hand-in-hand with the farmers to improve the local agricultural exhibition.

Their interest was largely in getting out better stock exhibits and making the dairy exhibits larger and having them more carefully arranged. The writer has attended a number of these conventions in the past but has never seen the spirit of fellowship between farm and town so marked before and it certainly augurs well for the future of the country fairs.—H.

CANADIAN WHO HAS RISEN.

D. Findlay, manager of the sales department of the L. S. Starrett Company, Athol, Massachusetts, paid a visit to old friends in the trade and shook hands with many of his old school companions in Toronto this week. He began his business career with Samuel Benjamin & Company about twenty years ago. After receiving a thorough training there, he began to attract the notice of business men, and when Mr. Starrett wrote to a friend here asking him to recommend a promising young Canadian who knew the hardware business, was absolutely reliable, and would be loyal to his firm, Mr. Findlay was recommended. From a junior he has risen steadily to the important position of sales manager. He has read Hardware and Metal constantly since the first number was issued, and was amazed when he visited the office this week to see what a big organization it had become.

HARDWARE TRADE GOSSIP

Quebec.

E. M. Lapierre, of Buckingham, Que., has been visiting hardware circles in Montreal.

I. England, of England & Sons, Knowlton, Que., has been on a visit to Montreal.

C. P. Tucker, of Alex. McArthur & Co., manufacturers of paper and roofing materials, Montreal, has just returned from trip to the Old Country.

Alex. McArthur & Company, Montreal, manufacturers of tarred building papers, felt and asphalt roofing, report that the volume of business done in 1907 established the year as a banner one in the history of the establishment. Their "Genasco" brand of two and three-ply ready roofing papers has found a universal market, and is decidedly popular with building contractors, and other users of the material.

The Starke-Seybold Montreal hockey team played Lachute seniors, ex-champions of the Lower Ottawa League, at Lachute, Que. The game was one of the best exhibitions of hockey played at Lachute this year, and ended in favor of Lachute by 6 to 4. Mr. Blair, manager of the local club, entertained both teams at supper after the match. C. E. Wood, of the Dominion Cartridge Co., Montreal, invited the hardwaremen to visit the works, and the day after the match they drove to Brownsburg, near Lachute, where the factories are situated, and were given a good reception. After dinner, the visitors were shown over the factories. The paper works of J. C. Wilson & Co., Montreal, were also visited.

Ontario.

G. C. Denton & Co., Sprucedale, Ont., general merchants, have assigned.

Robert Waiver, stove merchant and plumber, Orillia, has assigned.

Knight & William, hardware merchants, Maple, Ont., have sold their business to Gavin Lawrie.

A. T. Pennington, Bowmanville, has sold his hardware business to Charles Brown, grocer, of the same town.

Lendon Bros., hardware merchants, Leamington, Ont., have dissolved partnership and the business will be continued by H. Lendon.

The Brooks-Sanford Hardware Co., Toronto, are suing Joseph Hoops for $296.63 for hardware supplied for the Dewson Street School.

H. B. Dale, who formerly represented H. S. Howland, Sons & Co., Toronto, has joined the traveling staff of Lewis Bros., Montreal. He will make his headquarters at North Bay, and succeeds C. L. Devitt, who has been transferred to his old territory. Mr. Dale for ten years was connected with the Aikenhead Hardware Co., Toronto.

An application for a winding up order for the Aylmer Iron Works, Aylmer, has been served by the executors of the Sovereign bank. The total assets of the company are stated to be about $96,000, consisting of real estate, machinery stock, and book debts, while the liabilities are Sovereign Bank, $96,958.26 and other debts said to amount to about $10,000. The order will not be issued until March 1.

Western Canada.

W. T. Speed, hardware merchant, Austin, Man., suffered a small loss by fire last week.

W. D. Cameron, of Lauder, Man., has bought Mr. Maguire's hardware business at Elgin.

John Kehler, hardware merchant, Rosthern, Man., has sold his business to Jacob Knechtel.

Leon Akramovitch, hardware and furniture merchant, Winnipeg, has made an assignment to C. H. Newton.

Pollard's hardware store, Wawanesa, Man., was destroyed this week in a fire which wiped out about one-half of the business section of the town.

W. W. Rutan, Melfort, Sask., was in Winnipeg last week, enjoying the bonspiel and incidentally attending to some business matters. He was seen by a Hardware and Metal representative in one of the wholesale houses.

H. T. Price, Boissevain, was in Winnipeg last week. He is one of the many hardwaremen who have adopted the cash system in their business and speaking to Hardware and Metal he expressed himself as being well satisfied with results so far attained.

LEAD BOUNTIES.

A motion to extend the bounty on lead mined in Canada for another period of five years was made in the House of Commons, Ottawa, this week. About five years ago the Government set apart a sum of $2,500,000 for this purpose which expires next spring. The bounty was governed by the price of English lead, and as the product rose in the British markets the bounty became less for Canadian mines. As a result of only $750,000 of the total sum has been used and the Boards of Trade in British Columbia where the mines are situated have asked the Government to agree to extend the bounty for another five years.

A ROOFING SPECIALTY.

Among the comparatively new specialties in the hardware trade, Amatite roofing has come to assume considerable importance. It is made with a mineral surface requiring no painting; and after it is laid, calls for no care whatever. This feature of the roofing is a powerful selling argument. The manufacturers are spending for advertising $100,000 a year, they receiving many requests for free samples, and these are always turned over to the nearest local dealer for consideration—the manufacturers refusing to sell except at a higher price than that which would be charged by the local dealer. The Canadian agents are the Paterson Mfg. Co., Ltd., Montreal, Toronto, Winnipeg, St. John and Halifax.

BRIBED—NEED NOT PAY.

Rather a novel decision was that handed down recently by a court in New York City. In New York State there is a law making it a misdemeanor to bribe a purchasing agent, or other employe of a firm making purchases of goods from the person who offers the bribe. The penalty is a fine of $500 or a year in prison, or both.

It appears that one firm sold a large retail store a $1,555 bill of goods, paying the purchasing agent a 5 per cent. commission on the transaction. The agent's firm learned of this and refused to pay for the goods, and further refused to return them. The matter was brought into court with the result that the retail firm was upheld. The court decided that since the goods were placed with them in a criminal manner, the contract need not be carried out by the purchasers.

STEEL SQUARES.

The large steel squares used by carpenters are such a common tool that perhaps few know when and where they were first made, and how they came to be used, or even give the matter a thought. The making of them is a great industry now, but when the last century came in there was not one in use, says the Hardware Dealers' Magazine. The inventor was a poor Vermont blacksmith, Silas Howes, who lived in South Shaftsbury.

One dull, rainy day a peddler of tinware called at his shop to have the blacksmith fasten a shoe on his horse. These peddlers traveled up and down the country, calling at every farmhouse, buying everything in the way of barter. This one had a number of wornout steel saws that he had picked up in various places. Howes bargained for them by shoeing the peddler's horse and receiving the saws in payment, and each thought he had an excellent trade.

His idea was to polish and weld two saws together, at right angles, and thus make a rule or measure superior to anything then in use. After a few attempts he succeeded in making a square, marked it off into inches and fractions of inches, and found that it answered every purpose that he intended it for.

In the course of a few weeks he made quite a number during his spare hours. These he sent out by the peddlers, who found every carpenter eager to buy one. Soon he found orders coming in faster than he could supply the demand. One of his steel "squares" would sell for $5 to $6, which was five times as much as it cost him.

He applied for and obtained a patent on his invention, so that no one else could deprive him of the profit it gave him. It was just after the war of 1812, and money was scarce and difficult to get. But he worked early and late, and as he earned money he bought iron, and hired men to help him. In a few years he was able to erect a large factory and put in machinery for the making of squares which by this time had found their way all over the country and had made their inventor famous.

Markets and Correspondence

(For detailed prices see Current Market Quotations, page 66.)

MARKETS IN BRIEF.

Toronto.

Turpentine—Advancing.
Linseed Oil—Declined one cent.
Ingot Tin—Strengthening.
Copper—Continues very weak.

Montreal.

Ingot Tin—Stronger at 32½c to 33c.
Copper—14¾c shaded for large lots.
Spelter—Unchanged.
Lead—Cut for large orders.
Pig Iron—Firm.
Ground White Lead—Cut of 25c per 100 lbs.

MONTREAL HARDWARE MARKETS

Montreal, Feb. 28.—During January we anticipated that trade would quickly revive as spring approached, and these anticipations have been well founded, judging from the improvement that is taking place in the demand for goods. While the orders placed in this district since the first of the year may not have been of very big bulk, the business transacted leaves no doubt as to the upward tendency of trade. Tools are moving out better, and the retail trade report that orders for machine shop and factory supplies are growing more plentiful, and are of a character that indicate every prospect of strong activity as the season advances.

A careful review of the situation, taking into account present and prospective conditions, tends to encourage the prevalent belief in the early development of a good trade in all lines.

Orders have shown an improvement on the previous week, and although the West is still holding back somewhat, the east is showing unmistakable signs of awakening to the near approach of spring. The roads are now in fairly good condition, and the travelers are keeping well within their scheduled time. House cleaning goods are showing most activity at present, and sad irons, double pointed and other carpet tacks, clothes line pulleys, wringers, washers and step ladders are moving well for future delivery.

Builders' Hardware and Supplies—The various lines are moving well, especially window trimmings, lock sets, bolts and butts. Most of the orders are for future delivery, but some good sized ones are for immediate shipment, showing that building construction is still going on despite the weather conditions. As showing the state of the building prospects for Montreal, reports are to hand that the realty sales for January reached a total of over $400,000 in excess of the figures for the same month last year. This not only indicates that money conditions could not have been half so stringent as they were made out to be, but gives promise of good building activity in the city and district. The present supply of business premises and private houses is away below the demand.

Railway Supplies—The different lines are still feeling the effect of the curtailment of railroad construction work, and are moving but slowly. There is no doubt, however, as to conditions improving later on. Shovels are now quoted lower, owing to manufacturers cutting prices.

Lumbermen's Supplies—There is still a good call for boot calks, cant hooks, and chains for immediate delivery. Orders will soon be falling off, however, as the commencement of rafting operations will not now be long delayed.

Spring Goods—As we have said, these lines are moving the best of any just at present. Plated and fancy sad irons, household cleaning utensils, wringers, washing machines, step ladders, and tacks, are in excellent demand. Sidewalk scrapers are still moving.

Nails—Prices on nails are still being maintained. The demand is fair, and general conditions unchanged. We quote $2.30.

Sporting Goods—Articles in this department are moving slowly, guns and ammunition being in but little demand. Shot and cartridges for immediate wants are in fair request, but trade has not yet shown any real signs of opening up.

Bolts and Nuts—These lines are moving fairly well for immediate delivery. Tapped nuts in the place of blank ones are increasing in demand, owing to the fact that makers can do the tapping process much more cheaply and better than the user can by hand. In addition the dealer can sell them to farmers who are not equipped with threading devices.

Screws—The movement in screws is better. Makers again appear to be short of a few sizes, after every indication seemed to show that stocks were well assorted. Prices are unchanged.

TORONTO HARDWARE MARKETS.

Toronto, Feb. 28.—Business continues to improve on all lines and collections are more encouraging. In Ontario business for spring delivery is going ahead in a satisfactory manner and though the provinces in the middle west are still behind hand there has been an improvement noticed. Building prospects throughout the west, together with the large amount of railroad construction contemplated for this year, will make a demand for hardware in most centres equal, if not greater, than that of last year. The re-opening of navigation is being awaited in shipping circles and present indications point to large quantities of goods being forwarded by water during the season. Prices on all lines remain firm and as the price lists have been revised on spring goods it is thought most lines will remain steady for some time.

Builders' Hardware and Supplies—Orders for future delivery are increasing owing to the nearness of the building season, but the quantities being booked are still below last year's average. The new styles of goods offered this year are of a better grade than in the past, and a feature of the business to date is the call for high class tools. Prices are unchanged.

Oakum—There is a good call for oakum from plumbers and boatmen at present. We quote: $4.50 to $4.75 in 100-pound lots.

Iron Pipe—Stocks are fairly heavy at present and a seasonable demand exists. Some cutting is being done but we continue to quote: One-inch black, $5.28; on-inch galvanized, $6.23.

Building Paper—A moderate business is being booked at present and the prospects for a good summer trade are bright.

Spring and Summer Goods—Garden hose, garden tools, poultry netting, lawn mowers, and all lines of spring and summer goods are being booked in satisfactory quantities for spring delivery.

Sporting Goods—Dealers are replenishing their stocks with baseball and football outfits, fishing tackle, boating supplies, etc., for the spring and summer demand. A few lines of winter goods are still selling but as the skating and hockey season draws near a close the usual between season dullness is being felt.

Nails—The price of wire nails is still rigidly quoted at $2.30. The demand is fair but has not quite recovered from the effects of the recent cutting.

Rope and Binder Twine—These lines continue to improve and an average demand exists at present. Quotations remain unchanged.

Bolts and Nuts—The demand for these goods is reviving on all varieties and prices are firm.

Screws—There is a small and steady demand for common sizes at present and stocks are fairly large. Booking is assuming satisfactory proportions and prices are unchanged. We still quote 85 and 10 on flat and 80 per cent. on round styles.

Miners' Supplies—An increasing demand for miners' supplies is coming to hand and as these goods are for immediate shipment there is quite a satisfactory bustle about jobbing circles. Picks and shovels, handles, drills and machinery are being shipped in large quantities. Prices continue firm.

MONTREAL METAL MARKETS.

Montreal, Feb. 28.—The metal situation, taking everything into consideration, is slightly stronger this week but the improvement is one, in prevailing circumstances, that cannot be relied upon. It is evident from the colorless character of the general demand—the

promise of a fortnight ago not being fulfilled—that a stage has not been reached at which any improvement can be reckoned upon as being likely to last for more than a few days at t stretch. Speculative interests may bull the market, and sudden scarcity in available metal creature a spot premium, as in the U. S. tin situation lately, but these inflations have no stability. The next day may see a corresponding decline. Until buying opens out freely there can be no strength.

It is extraordinary how the demand holds off. At the commencement of the year it was freely asserted that users were at the end of their stocks, and that any day would bring them into the markets in determined fashion. But practically eight weeks have gone by, and there has been no movement of this description. The demand has shown signs of increasing strength, but in nothing like the proportions that estimates as to the consumptive needs of Europe and America at one time legitimately seemed to promise. Buying is going on in a tentative way, but it has no bulk. Industrial activity has not fallen off to the extent to warrant this lack of purchasing, and over and above the fact that users are continuing to buy from hand to mouth—and, therefore, paying a higher price—stocks must have been more ample than was generally considered to be the case.

Tin has strengthened again in the Old Country, but has slightly weakened in the States, the premium on spot having disappeared. Buyers should take warning from the recent state of things. and hold better quantities of metal. Stocks are light, and a scarcity of spot metal may be looked for at any moment. Copper has strengthened in the Old Country, and there are reports of large sales taking place to far eastern buyers. If this is so, there should be a firming tone to copper, with a corresponding movement in the States, as producers have been refusing to meet the price prevailing across the Atlantic. There is no feature of any moment in the other metals, except a rise and fall in lead, leaving the price in the end weaker than the week previous. Locally, general conditions are uncertain, but there is one good feature and that is, that large inquiries for spring shipment are coming to hand.

Pig Iron—The English situation is stronger. There has been an advance of 1s. during the week, making the price of Cleveland warrants now 49s. 9d. Makers have booked some good export orders, and the heavy foundry trade is in a satisfactory condition absorbing the bulk of the present make. Stocks continue low with good shipments, the result being that makers are asking somewhat higher prices. Good Scotch brands are also showing strength, and providing that there is no further reduction in the cost of fuel, are likely to maintain present level if they do not show the same upward tendency as the English grades. The finished steel situation is weak, owing principally to the cessation in shipbuilding. This also influences the steel-making grades of pig iron which are on an extremely low level, and in poor demand. The finished steel industry in the States is improving and showing good activity. About 75 per cent. of the mills are now working, and if present conditions continue, all the mills should be running shortly. Prices are steady. Locally, fair shipments from stock are taking place. We quote: Middlesboro No. 1, $21.50; ex-store, with a shading for large quantities for import; No. 3, $20.50; Summerlee, $25.50.

Tin—Tin is slightly stronger in the English market, being quoted at £130 10s., an advance of 3s. In the States the price has dropped to $29.15, and the tension for the time being has relaxed. The situation of tin generally bears resemblance to that of last week. With stocks light in the Old Country, and heavy tonnage booked for export, the present strong tone of the market should be maintained. The spot scarcity in New York has disappeared, but even with the heavy shipments coming, the late situation may be repleted again, as stocks here are short. Nothing but the lightness of the demand prevented a higher figure than that which recently prevailed. Locally, the situation has strengthened, and we now quote 32½ to 33c.

Copper—Copper after going up during the week to £58 17s. 6d. closed firm in the English market at £57 17s. 6d., an advance on last week's closing figure of 5s. Heavy buying in coper, which would account for the strengthened position is reported to have been made by Chinese and Japanese interests. If this is correct, it will clear up a lot of copper supposed to have been held unsold, and the financing of which caused so much weakness to the market. Although the sale may be only for speculative purposes, it will tend to strengthen the markets considerably, and if the buyers can hold the metal long enough, the reselling on a stronger market should not have disastrous effect. The demand in the States shows signs of improvement, some good sized orders being placed, and the market closes much stronger with the price around 13c. Locally, the situation is steady, and we still quote 14¾c with shading for large lots.

Spelter—Spelter is weaker in the Old Country, being quoted at £21 7s. 6d., while it has dropped 5c East St. Louis, being now $4.75. This falling off is not a sign of weakness, a reaction being only to be expected after the recent higher prices prevailing. It may be, too, that the intentions of the European producers to combine have received a set-back of some description. We continue to quote 5½ for foreign and 5¼ for domestic.

Lead—Lead has fluctuated in the English market, going up to £14 5s., but closed at £14, which leaves it weaker than last week. The market seems to be without character, and there is little to indicate as to how the situation will tend. We quote imported pig $4.50, with shading for good sized lots.

Antimony—There is no feature to note in this market. No business is doing and quotations are unchanged.

TORONTO METAL MARKETS.

Toronto, Feb. 28.—No change of note has developed and buying continues light, local merchants not following the many changes made in the speculative markets in New York and London. Tin is a little stronger, but copper has not gained any strength during the week. Pig iron is not in evidence so far as big business is concerned and lead and spelter are likewise in poor demand.

The revival looked for after the New Year has not developed, buyers generally lacking confidence in the influences behind the market. Be this as it may, the low prices on the various metals suggest that this is an opportune time to lay in stocks, the buying power of the dollar to-day being in some cases two or three times as great as a year or so ago.

Ingot Copper—The past ten days has seen a big drop in prices, some sales having been made in New York at as low as 12¼c for electrolytic, the lowest price since October, when 11¾c was touched. A reaction has brought the price up to 12¾c and 13c at New York, but another dip down to 11c is a possibility with foreign warehouses filled and American stocks increasing. As showing the course of the standard market at London, which jockeying tactics may be expected to be continued under present conditions, we give the following prices which have prevailed since October 23, 1907, the lowest point for several years. The rises and falls which have governed the price of refined copper are quite significant: Oct. 23, 1907, £55 10s; Nov. 1, 1907, advanced to £67; Nov. 20, 1907, declined to £58; Nov. 27, 1907, advanced to £63 5s; Dec. 17, 1907, declined to £57 10s; Jan. 15, 1908, advanced to £64 5s; Feb. 19, 1908, declined to £56 12s 6d. Locally we quote 14c to 14¼c for casting ingots.

Ingot Tin—Prices continue to fluctuate the net result of the week being a slight gain in England. The United States market is weaker, however, although the Steel Corporation is preparing to export 100,000 tons of sheet bars to Wales. In the local market bookings for tin plates, etc., have been very satisfactory, merchants feeling safe in accepting orders for finished lines at the low prices for ingots now prevailing. The market is not far from the bottom at the worst and the change of a cent or two on ingots cannot make much change on sheets. We repeat our last week's quotation of 31c to 31½c.

Pig Iron—Dullness continues to be the outstanding feature in the iron market, such buying as there is being of very small lots. Some enquiries are being made for future delivery, however, and a buying movement may develop if reasonable concessions can be secured for large orders. The Canada Foundry Co. is keeping about 1,300 men at work at its Toronto plant, and has received a large order for cast iron pipe from the Toronto waterworks department. The British market is in much better shape, public stores being at a low point with a better feeling existing. Sellers are,

therefore, taking a stronger position than for some weeks. We continue to quote: $21 for No. 3 Middlesboro, and $22.50 for No. 2 Canadian pig iron.

Lead—Fluctuations in outside markets has not strengthened local conditions. The demand continues quiet, with from $4.15 to $4.25 still quoted on imported pig.

Spelter—With only an average demand prices keep very firm, we still quoting 5¼c for foreign and 5c for domestic.

Antimony—The demand is small and prices are unchanged at 11c to 11½c.

Old Materials—The market is slow, with small sales and no changes in prices.

U.S. IRON AND STEEL TRADES.

Cleveland, O., Feb. 27.—The Iron Trade Review to-day says: Some concessions on prices of forging billets have been made in the Chicago territory, but as a rule, prices of billets are well maintained. Rumors of cutting on prices of structural shapes seem to have arisen from the low quotations which are being made on fabricating and erecting. The orders of the American Bridge Co. are expected to amount to about 20,000 tons for February, and independent concerns are doing a fair business. In the cast iron pipe market there is a firmer tone, and some fair orders have been taken.

The Great Northern Railway has placed an order for 45,000 tons of rails and further orders are expected. There is a fair inquiry for light rails. Prices on boiler tubes are being cut in the Chicago district.

A slight improvement in the demand for coke is recorded in Chicago and Cincinnati, but in the Pittsburg district prices are demoralized and the demand is light. Dealers in old material are adhering firmly to the advanced prices recently announced.

LONDON, ENG., METAL MARKETS.

London, Feb. 25.—Cleveland warrants are quoted at 50s 6d, making prices as compared with last week 1s 10½d higher.

Copper—Spot copper opened firm at £58 2s 6d, futures at £58 12s 6d, and after sales of 300 tons of spot and 800 tons of futures, closed steady at £58 2s 6d for spot and £58 12s 6d for futures, making price as compared with last week £1 2s 6d higher on spot and £1 7s 6d higher on futures.

Tin—Spot tin opened easy at £129 12s 6d, and futures at £128 12s 6d, and after sales of 140 tons of spot and 180 tons of futures, closed firm at £130 for spot and £129 5s for futures, making price as compared with last week £3 10s higher on spot and £3 15s higher on futures.

Lead—The lead market closed at £13 17s 6d, making price as compared with last week 3s 9d lower.

Spelter—The spelter market closed at £21 7s 6d, making price as compared with last week 2s 6d lower.

A DISTINCTION.

To play cards some men refuse,
Saying gambling is a sin;
It's gambling when you lose,
But business when you win.

Quebec and Maritime Provinces*

St. John Men Interested in Building Scheme at Hartland — Trade Conditions Improve at Halifax.

HALIFAX.

Halifax, N.S., Feb. 24.—Trade is gradually improving and the prospects for spring business are very good. The travelers now on the road are sending in good orders. Prices are now fairly steady and collections are about an average for the season of the year.

* * *

There is something doing in the line of hockey among the hardware clerks in Halifax, and some strenuous struggles are taking place. During last week teams from H. H. Fuller & Co., and George E. Smith & Co. lined up at the arena, and the latter won by the score of two goals to one.. Kelly's, Limited, defeated the team from the hardware firm of Wm. Robertson & Son, four to nil. In the Commercial League the team from the hardware firm of A. M. Bell & Co. defeated a team of electrical workers from John Starr & Co. by a score of 8 to 2. Bell's team is well up in the running for the trophy.

ST. JOHN, N. B.

Business with the hardware trade has been rather quiet of late, and it is expected to continue so for some weeks yet. A good spring trade is anticipated.

* * *

A statement of the winterport business up to Feb. 17, shows that fifty-one steamers have taken away cargoes valued at $11,047,317, divided as follows:

Canadian goods	$7,680,273
Foreign goods	3,367,144

This is an increase of $1,757,855 over the previous season to the same date.

* * *

A number of business men in Hartland, Carleton County, intend erecting a big brick block there during the coming summer. The congregation of the Church of England will also begin the erection of a church and several smaller stores and dwellings are being planned, so that Hartland will have quite a building boom this year.

* * *

The Common Council has decided to pay B. Mooney & Sons, contractors on the Loch Lomond water extension, $20,000 in settlement of all their claims against the city. The contractors have agreed to accept the amount. This puts an end to the lawsuit which has been before the Circuit Court here for nearly a month. Messrs. Mooney asked for $25,000 for extra work on one section, and they also had a claim for a considerable amount on another section.

* * *

John S. Coughlan, plumber, St. John, has assigned to John Keefe, manager of the James Robertson Co., for the benefit of his creditors.

NEWCASTLE.

Newcastle, N.B., Feb. 24.—Frederick T. Siddall, hardware merchant, of Sackville, has assigned to Sheriff McQueen for the benefit of his creditors.

* * *

The Enterprise Foundry Co. of Sackville, had a banner year in 1907. Shipments of stoves were made to every province in Canada.

* * *

The estate of the late Timothy Lynch, the well-known Miramichi lumberman, is valued at upwards of $150,000.

* * *

The Maritime Heat and Power Co., of Chignecto, has purchased the electric light plant of Sackville and will operate it in future.

* * *

The Dominion Iron and Steel Co., of Sydney, N.S., has taken over the iron mines of the N.B. Iron Co. at Lepreaux, and men have started to drill for ore. On the result of this preliminary work depends whether a smelter will be erected there or the ore shipped to Sydney. The ore is of good quality. Hitherto the company has got all its iron from the Banner mine in Newfoundland, where 1,000 men are employed. The Lepreaux mine is easily accessible by water which will make shipment of ore cheap.

* * *

The Truro Foundry & Machine Co., at Truro, N.S., has been reorganized, with a capital of $100,000, all common stock, at $100 a share. Among those named as provisional directors are William J. Kent, lumberman; Andrew J. Campbell, barrister, Truro, and Ernest Crowe, lumberman, of Clifton.

Goods well displayed are half sold—it also is true that a sample presented or demonstrated with careful courtesy makes a much more forceful impression than if tossed or thrown at a buyer.

*Contributions are invited from hardware merchants, travelers or clerks in places where there is not a regular correspondent of this paper.

Told by Ontario Correspondents

Hamilton Industries to Benefit by New French Tariff—Many Factories Resume Operations—London Firm Entertain Their Office Staff—Some Changes Made Amongst the Ontario Retail Trade.

HAMILTON.

Hamilton, Feb. 26.—The question of molders' wages is still hanging fire. So far there has not been any indication of a settlement of the question in this city, although several conferences have been held between the manufacturers and the union officials. The factories are still idle, but the men refuse to accept the proposition of the stovemakers on the ground that they cannot stand a reduction at present owing to the cost of living. On the other hand, the manufacturers claim that while the average molder earns about $1,000 a year at present, with occasional lay-offs, by consenting to a reduction they would earn less on the actual work done, but there would be fewer lay-offs, thus bringing the total earnings up to about the same figure. The stove makers declare that unless the manufacturing expenses are reduced in some way, the situation will be serious and that it may be necessary for some of them to close up shop or seek a place on the map where the rate of wages is lower.

* * *

The enactment of the new treaty between Canada and France, by which this country secures a preference on its exports, will mean a big thing for this city. The International Harvester Company, the Canadian branch of the Deering-McCormick syndicate of the United States, has announced that as a result of the new treaty all of the implements for the French trade will be made here in future. At present the American concern ships about $1,500,000 worth of farm implements to France yearly and this will all be handled by the local plant in future. This will mean that the present plant, which covers forty acres, will be almost doubled and its staff of 1,800 hands greatly increased. The company has a total of 135 acres of land here and will have ample room for extensions.

* * *

The police commissioners have decided to erect a new police station in the west end of the city, at an estimated cost of $6,000. Tenders will be called for shortly.

* * *

The city is planning the building of a technical school to cost between $40,000 and $75,000.

* * *

Assessment Commissioner Macleod, who is also industrial commissioner, has secured another industry for the city and as usual it is a branch of a big American manufacturing concern. The Champion Road Machinery Company of Philadelphia has bought over the stock and premises of the defunct Good Roads Machinery Company, of this city and will immediately open a branch here for its Canadian trade. The Philadelphia company is one of the largest of the kind in the States and it is expected that a big plant will be established here in due time and a large number of hands employed.

* * *

R. A. Robertson, of this city, has been elected a director of the Menzie Wall Paper Company of Toronto, which has been reorganized.

* * *

The plumbers report a comparatively slack winter business. Owing to the fact that the weather had been generally mild as compared with former seasons, there has been a dropping off in repair work accruing from breaks in water systems. A few of the plumbers have already tendered on spring contracts, but the general complaint is that the architects are not making as many preparations for spring work as in former years, the unsettled condition seeming to put a crimp in the building trade.

GALT.

Galt, Feb. 25.—Trade in the hardware line in Galt is fairly brisk, although somewhat behind the same period in previous seasons. People are buying the plainest of everything and the occasional bursts of extravagance in evidence in former years, is lacking. The merchants are hopefully awaiting the opening of spring.

* * *

The industrial situation in Galt is considerably improved. Another large firm has resumed the 10-hour day, and it is expected that another two weeks will see all the local industries running full time.

* * *

Ald. A. J. Oliver, manager of the McDougall Pump & Foundry Company, is spending a week in Quebec on business.

* * *

The James Warnock Axe Works, which has been running on short time for some months, will shortly resume the full day.

GUELPH.

Guelph, Feb. 26.—There have been numerous changes in the clerking staff of the Bond Hardware Co. Morgan White has resigned his position, and George Dawson, who was formerly in their employ, takes his place.

* * *

Fred Pugh, clerk in G. H. Awde's hardware store, Drayton, was operated on for appendicitis in Wingham Hospital last week. From the latest reports he is doing well.

After a holiday of two weeks, the employes of Clare Bros. Foundry, Preston, resumed work last week, and there is no reason to believe that work will not be continuous during the year. The firm have a large staff and while their works were only closed down for stock-taking, the absence of their pay roll amounts to a good deal to the town. For the past three or four years business was exceptionally brisk at this season of the year, and it was only possible to close down for one week to take stock. So far as can be seen at present the men will work eight hours a day until the spring trade opens up.

* * *

Everything is quiet in local circles. Most of the hardware stores have just finished stock-taking and at present trade is dull, and is expected to remain so until the spring trade commences. With the exception of a few repairs in the plumbing line that section is also quiet. The architects of the city report that there are very few plans for new buildings being prepared. The only work at present which is having plans and specifications prepared, is the alterations at the Wellington Hotel.

* * *

Reports from Elmira state that the year 1908 promises to be a stirring one in the building line at that place. Plans have already been drawn up for ten residences, and it is expected that many more will be erected.

* * *

Slimmon Bros., of Drayton, have sold their hardware store to O. B. Henry, owner of the store.

LONDON.

London, Feb. 25.—Both retailers and jobbers appear satisfied with business conditions. The situation compares favorably with this season in the best of years and the outlook is considered most encouraging.

* * *

The Hobbs Hardware Company has presented the star local hockey team with an outfit of hockey sticks, which the boys intend using in the semi-final, and they hope the final games of the intermediate O. H. A. series.

* * *

Col. and Mrs. Gartshore, gave an at-home at their residence, South London, on the evenings of Saturday and Monday last, to the staff in the offices of the McClary Manufacturing Company, of which the colonel is vice-president and general manager. The staff has grown to such dimensions as to make their accommodation in any ordinary residence impossible, so it was found necessary to make two evenings of it. The affair proved most enjoyable to all who attended.

CHATHAM.

Chatham, Feb. 25.—One of Chatham's veteran plumbers passed away on Sunday night in the person of James Watt,

head of the firm of Jas. Watt & Sons. Mr. Watt was 78 years of age. A native of Glasgow, Scotland, Mr. Watt landed in New York at the age of 20, and, after locating in several places, finally reached Chatham. He was a coppersmith by trade, and was for 25 years employed by the old hardware firm of J. & W. McKeough. On severing his connection with this firm, Mr. Watt opened up business on his own account, his firm being for many years one of the best known in plumbing and tinsmithing lines in this vicinity. The heating and plumbing of many of Chatham's largest buildings was installed by the late Mr. Watt. He was an expert coppersmith, the fittings of several local factories and mills being put in by him, and for several years he did all the copper work for the M.C.R. in Detroit. Practically all the oil well casings in use in the old Petrolea, Bothwell and Enniskillen oil fields were manufactured by him. Mr. Watt was a descendant of the famous Jas. Watt, who invented the steam engine. Mr. Watt leaves four sons and three daughters. Geo. Watt, of the Dominion Radiator Company, Toronto, is a grandson.

The funeral took place on Wednesday to Maple Leaf Cemetery, Rev. A. H. MacGillivray officiating.

* * *

The foundry department of the Wolverine Brass Company began operations last week, and, as a result, every branch of the plant is now running.

* * *

Following the dissolution of the firm of Drew & McCallum, A. McCallum, who will continue the business, is conducting a dissolution sale.

* * *

W. M. Lowery, president of the Ontario Torpedo Company, of Petrolea, was in the city last week on business.

* * *

The sale of the assets of the Chatham Motor Car Company, Limited, which recently made an assignment, is billed to take place by public auction at the company's premises here on March 4 at 2 p.m. It is understood that a new company will be formed to take over the property and plant, and many look to see the concern once more running very shortly.

* * *

The Tilbury Village Council last week accepted Thos. Vickerman's offer of $2,750 for the village electric lighting plant, upon certain conditions, one being that Vickerman would be granted a 10 years' exclusive franchise. If the minor details can be arranged, Tilbury, which has been numbered these many moons with "them that sit in darkness," should soon be again enjoying the blessings of light.

* * *

Oil Springs is looking forward to a couple of new industries, in the shape of a canning factory and a flax mill. A party recently approached the village municipal council on the subject, and negotiations are now in progress. The two factories will employ about 100 people.

BARRIE.

Barrie, Feb. 19.—Business is booming up brightly and the warm air causing the snow to thaw in an encouraging way gladden the heart and makes us "almost" forget how the thermometer had been holding its own around the thirty below zero mark. The plumbers have been kept busy running from house to house repairing bursted pipes, while the hardware trade has been confined almost entirely to snow shovels. The cold weather aided by the very severe storms which had rendered roads through the country impassable, has kept the farmers home, but now they are again finding their way into town and receiving the glad hand.

* * *

Stock-taking is fairly well over and the windows are losing their "stock-taking" appearance and taking on a smarter and more up-to-date appearance.

* * *

A branch of the Bank of Nova Scotia has recently opened here and reports business even above the expectation.

West of the Great Lakes

Calgary's Many Factories—Another Railroad at Prince Albert—Big Contract Secured by B.C. Hardware Firm.

PRINCE ALBERT.

Prince Albert is likely to have another branch railway. A petition has been formally presented to the British Columbia Legislature for a provisional charter for the Hudson's Bay Pacific Railway. The proposed route is from Fort Churchill, on the Hudson's Bay, to Port Simpson, on the Pacific coast. From Prince Albert a branch will be run north to meet this line at Green Lake.

* * *

The winter in this district has been perhaps the best since the settlement of the country some thirty years ago, in that there has been a greater proportion of fine weather, though our winters always bring an unbroken round of sunshine. The temperature has been spring-like as a rule, to date, with scarcely enough snow to enable the ordinary teaming operations to be carried on as successfully as they might be, still large quantities of grain have been marketed and recent inquiries made by the board of trade show that at least 60,000 or 75,000 bushels of first-class seed remains in the district avilable for spring use. Much of this has been submitted to the government test and has shown germinating qualities as high as 98 per cent., and even 100 per cent.

The lumber operations are being very successfully carried out. The Sturgeon Lake Lumber Co.'s ice locomotive has been running at her normal speed for many weeks, bringing in from 125,000 to 140,000 feet of lumber and a large sleighload of lathes, several thousand on each of her daily trips.

* * *

The C.N.R. railway and traffic bridge is moving forward rapidly. The abutment and three piers are ready for steel work, two of the remaining piers are within a few days of completion. While the remaining pier is being pushed forward very rapidly. If the steel were here the bridge could be completed very soon after the ice moves out.

* * *

Preparations are being made to erect a large and splendidly equipped collegiate institute at a cost of about $100,000. St. Albans Girls' School will erect a 30,000 or 40,000 dollar building this season. The Hudson Bay Company and the Imperial Bank will both put up large buildings during the summer of 1908. The buildings, together with the bridge construction, will account for half a million dollars' worth of building in 1908. To these must be added a host of smaller buildings, such as residences, warehouses, and smaller business places.

* * *

The prospects for Prince Albert city and district never was brighter than at present. From the inquiries received by this board of trade office and the Dominion lands office, it is certain that a large influx of settlers will come into the city in 1908.

SASKATOON.

Saskatoon, Feb. 20.—The International Harvesting Company have decided to make Saskatoon a wholesale distributing point. In future the Saskatoon Forwarding and Storage Company will be their agents for this district.

* * *

A number of large pipe coils have arrived at the C.N.R. roundhouse. They will be put in position near the fan, which is being installed with the hot blast heating system. The hot blast system is considered the most suitable for heating a building of this sort. The revolving fan is connected to large iron pipes, through which hot air is forced to every part of the extensive building. The rails have been laid between the turntable and the roundhouse and very soon the whole will be ready for use.

* * *

A successful convention of the farmers of this province, lasting three days, has just been brought to a close. During the sittings many important resolutions were passed and weighty questions discussed. Matters regarding oat grading, hail insurance, elevators, coal lands an agricultural college, the Hudson's Bay Railway and other subjects of interest to grain growers came up for consideration.

CALGARY.

Calgary, Feb. 22.—The hockey tournament among the hardware merchants of Calgary this winter is now over and the team of Linton and Hall have been declared champions. The accompanying photo of the winners was taken by one of the staff and shows Mr. Linton, a member of the firm, lending his moral support to the players.

* * *

The following list of factories and large plants now established in the city has been collected by Charles E. Webster, secretary of the Board of Trade, and will give an idea to the eastern business man of the position Calgary occupies at the present time in the manufacturing business. It will be noticed that the C.P.R. car shops covering an immense space and employing hundreds of hands, have not been included. A biscuit factory, a soap factory, a box factory, two candy factories, two iron works, two breweries, two cigar factories, a meat packing plant, a breakfast food factory, a cement

Linton & Hall's Champion Hockey team

works, three harness and saddlery factories, two pressed brick plants, three flour mills, a coffee and spice factory, two tent and mattress factories, a bedding factory, a macaroni factory, two dyeing and cleaning works, two cold storage plants, two electric light and power plants, two electric power (only) plants, a gas plant, a natural gas plant (at present under construction), two lumber mills and several planing, sash and door factories. Ninety-seven wholesalers and thirteen banks.

* * *

E. McBride, of McBride & Company, wholesale and retail hardware merchants, is now on a business and pleasure trip to England and the European continent.

* * *

Norman Morrison, of Morrison & Johnson, hardware merchants, of Lacombe, was one of the wining team in the Grand Challenge at the curling bonspiel which has just been successfully completed here. The Calgary bonspiel, like everything else, is growing by leaps and bounds; this year there were thirty-one rinks.

VANCOUVER.

Vancouver, Feb. 21.—Everett M. Breed, district manager of the Allis-Chalmers-Bullock Company, is very hopeful of the future. "Things are picking up remarkably well all through," he remarked this morning in discussing conditions and the spring outlook. "Mining is going ahead, and that will help the smelter business, and all are using power machinery. The electrical business is also good. The B. C. Electric Railway Company is adding to its plant and equipment, and the use of motors is becoming extensive." Mr. Breed is of the opinion that the slump has not been felt as much out here as in other places in Canada. "Although January was rather quiet, generally speaking," he remarked, "we did better than in the same month of last year. Of course, it meant more hustling, but the results were very satisfactory."

This company deals particularly in heavy power machinery and electrical machinery, paying attention also to sawmills. It was successful in landing two large orders in the last line, that of the new equipment for the Fraser River Sawmills at Millside, and for the Sayward Lumber Company, at Victoria. This machinery is manufactured in the United States, and is sold here by the Canadian branch of the company.

* * *

Those dealing exclusively in sawmill and logging supplies, especially custom work, such as castings, etc., find trade dull. There is not a great deal doing in this line yet, and the prospect is not particularly encouraging. Still, with the opening up of spring the lumber business should take on some of the activity which marked it last year.

* * *

Mining men are of the opinion that the metal outlook will improve considerably during the next two or three months. "At the beginning of the slump in metals, former Senator W. A. Clark, of Montana, who knows perhaps as much about copper as any man in the West, said that in six months conditions would again be normal or nearly so," remarked a man well up in the smelting business here. "It is still some time before that term is up, and I think that when it is the outlook for mining will be far better than at present. It was stated at that time that there was a surplus of 200,000 tons of copper, and, of course, production has continued, although greatly reduced. How much copper remains on the market it is difficult to tell, on account of its being scattered. Much of it is doubtless in Europe in storage for there the demand will be felt as soon as here. The holders of the surplus, too, for business reasons, do not let the public know the exact situation. I think that within the next three or four months the situation will have assumed a much brighter aspect."

* * *

E. G. Prior & Co., Limited, which has head offices in Victoria, and branches in numerous cities on the mainland, has been awarded the contract for the metal required for the superstructure of the new swing bridge over the north arm of the Fraser River, south of Vancouver. The contract price is fixed at the rate of $8.80 per hundred pounds. The bridge will have a total length of 2,300 feet, with pivot pier and draw rest.

* * *

The Board of Works of the City Council at its meeting on Tuesday evening decided not to accept any tender for nails to be used by the corporation this year. One of the aldermen stated that the price would materially decline within the year, and acting on this advice it was decided to buy in the open market. The same course will be pursued in regard to lumber. Two tenders for cement were sent in, that of Evans, Coleman & Evans, for the local article at $2.50 per 350 lb. barrel, and of Robert Ward & Co., for Portland white cement in the same packages at $3.05 per barrel. Both tenders were accepted, and the Board will buy whichever it likes.

* * *

S. D. Martin, who has been identified with boat building in the Province for many years, and latterly in North Vancouver, has organized a company to build boats and engines in this city. The company has a capital of $50,000, and the location will be on Coal Harbor, where so many other small plants are now working. The firm name will be the Pacific Motor Works.

* * *

New Westminster, which during the past few years has been making a claim for the establishment of industries, is taking steps to make good her shipping facilities. The city lies about sixteen miles from the mouth of the Fraser River, and the services of Francis LeBaron have been engaged to draw up a scheme for making a deep water channel to the sea. He has submitted a report which is now being discussed by the New Westminster Council. A large number of industries, principally sawmills and machinery plants, are installed at this point on the Fraser River.

Effective Retail Hardware Advertising

Advertising is said to be printed salesmanship, and the definition is a most appropriate one. That being the case, it is well for every hardwareman to keep the definition in mind every time he sits down to write an ad. If this definition of advertising could be more strongly impressed upon every merchant's mind, it would do a world of good. One of the main functions of trade newspaper like Hardware and Metal is to keep on reminding its readers that advertising really is printed salesmanship. The very best proof that advertising is salesmanship is found in the fact that the men and firms who treat it as such are the most successful in turning over goods at a profit and earning a better reputation with every sale. That is successful merchandizing.

If any average hardwareman had in his employ a salesman who talked to the public after the fashion of a great many of the retail ads. which appear in the press he would fire him out of hand.

* * *

Some bad advertising is the result of a misconception of what good copy consists of, some is the result of great haste in the preparation of copy, and some is the result of indifference. And probably the worst advertising copy produced is found in space belonging to the indifferent advertiser. Why is this? Why on earth should any man be indifferent to the proper use of a commodity which costs him coin of the realm? It is just like a lecturer paying rent for a hall and then hanging around, not caring a continental whether he used it or not. Ever see a lecturer doing that? Not on your tintype! When the average sane man pays out his good money for anything he is extremely interested in getting good value for it.

Sometimes a publisher, by his attitude when canvassing a merchant for a contract, depreciates the value of the space he is selling. Sometimes he conveys the impression to the merchant he is canvassing that he is asking for the contract as a personal favor or for the "good of the home paper." Any publisher who gives out such an impression is really knocking the business of the merchant he is canvassing. For it is a tendency of human nature to regard a contract entered into in such a spirit as something which requires little further attention. And if anything on earth needs proper and continued attention it is advertising space in the press. Any merchant, then, who is led to undervalue advertising by the attitude of a canvassing publisher, is being led away by that publisher from a proper appreciation of the greatest factor in modern retailing.

There is no "favor" about an advertising contract—providing the publication is legitimate, and is read. It is a business transaction pure and simple. The merchant buys from the publisher a certain amount of blank space which will come before the eyes of a certain number of the merchant's possible customers. Why, then, treat that space with indifference?

Upon the proper use of advertising space by retail merchants a great deal of industrail activity depends. The large retail advertisers of the country not only increase their own wealth and power by the most efficient use of advertising space, but materially assist in the upbuilding of countless manufacturing industries and in the steady employment of thousands of people in those industries. These are facts which cannot be successfully disputed. The prosperity of the manufacturer and jobber does, without the shadow of a doubt, depend largely upon the attitude of retail merchants towards the advertising space of their local newspapers.

Buy your space, good hardwaremen, but don't let it go at that. Don't put off the preparation of your copy until the last minute and then write it hurriedly. And, above all things, don't regard it with indifference! It has value if you care to bring it out. And, as is the case with most other things, to bring

BEAUTIFUL XMAS GIFTS

Suitable for Father, Mother, Brother or Sister, in Fact for Everybody,

Are to be found in this store. There is no nonsence about the presents you buy at our store; good sensible presents, of unquestionable quality, all marked at reduced prices that are bound to move the goods with a rush. Our stock was never more complete with "quality" goods direct from the factories of the east. We want to do business with you and are confident that we can satisfy the most exacting.

"1847" Rogers Bro.'s Silverware

This famous line of plated ware needs no introduction, having been on the market over half a century, and is the recognized standard today. Our assortment is right up to date with all the latest patterns and designs. Seeing is believing. We're here to show you.

Four-piece Tea Service, with 15 in. Waiter; special price..... $25.00
Doulton Ware Salad Bowls, with helps..... $10.00
Fruit Dishes, beautifully decorated, from ..... $3.50 to $6.50
Berry Dishes, with spoon, at..... $4.50, $5.00 and $6.75
Lemonade Pitcher, with plated tops, at ..... $3.50 and $4.25
Bake dishes, with removable enameled linings, at $6.25 and $7.00
Cake Baskets from $3.50 to $7.00
Cream and Sugar, several patterns, at ..... $5.00 and $7.50
Sugar Bowls from..$2.75 to $5.00
Pickle Cruets from $1.50 to $5.00

Also a choice assortment of Butter Knives, Sugar Shells, Fruit Knives, Cold Meat Forks, Berry Spoons, Jelly Knives, Coffee and Tea Spoons, Cheese Scoops, etc.

Fancy Parlor Lamps

We have just received a lot of first-class Lamps of beautiful design. These goods arrived a little late, and every one is going at cost price to clear. Prices from $2.50 to $5.50.

The Rayo Lamp, best on the market for office or library .. $3.00
Hanging Lamps, splendid line, from..... $5.00 to $12.00
Mikado Night Lamps, just the thing for children; complete with decorated bowl and shade ...60c

Shaving Supplies

We have every requisite for gentlemen who shave themselves, and in this department, like our other lines, quality is of first consideration.

Ender's Safety Razor in plush lined case containing one triple silver plated holder, one stick soap, one brush and 12 keen-edged blades, ...$5.00
Ender's Safety Razor in paper box with 12 blades.....$2.00
"Carbo-Magnetic" Razors ...$2.00
Bokers' "King Cutter".....$1.75
Also Razor Hones, Strops, Brushes, etc.

Keen Kutter Tools, Etc.

For the boy with an inventive or mechanical turn of mind the wisest thing to do is develop it. To do this he must have tools to work out his ideas in models of wood or iron. Keen Kutter tools are the only complete line of tools in the world under one name and trade mark. Every Keen Kutter is guaranteed to be of satisfactory quality, and the finish on these goods is very much superior to any other line in the world

To anyone purchasing complete or part sets of tools this week we will give a discount of Ten Per Cent.

Bissell's Carpet Sweepers

These sweepers are known the world over as the finest made. Why not take one home to your wife? She will appreciate it more and more every day, besides it saves the carpets, curtains and furniture from dust and wear.

The "Grand Rapids" cyeo-bearing, with oak or mahogany case and nickle-plated trimmings...$4.00
The "Champion," a good, cheap sweeper, at.....$2.50

"Perfection" Oil Heaters

These heaters are made of steel throughout, with handsome nickle-plated trimmings, solid brass oil tanks, and the most improved burner ever devised. They burn absolutely without smoke or smell, and throw an intense heat. Just the thing to take the chill off the dining room in the morning, or to heat isolated bedrooms. Two sizes.

No. 120.....$4.00
No. 160..... 6.00

"Elite" Enameled Ware

Our display of the famous four-coated Elite ware comprises all the commonly used cooking utensils, such as Preserving Kettles, Tea Kettles, Milk and Rice Boilers, Sauce Pans, Teapots, Berlin Kettles, Pails, Dish Pans, etc. We import this ware direct from Austria, Europe, and it is guaranteed acid and poison proof.

Special sale of this ware till New Year's at a discount of Fifteen Per Cent.

Anything in Fine Furniture

As a gift is sure to be appreciated in the home. We have a well assorted stock of high and medium grade goods, all marked at bargain prices for the holidays. Come in and look it over. We have the piece you want.

Sideboards in surfaced oak, plain and quarter cut oak, from..... .....$15.00 to $45.00
Dressers and Stands, from..... .....$12.00 to $35.00
Hall Racks, from $10.00 to $18.00
Parlor Tables, in quarter cut oak and mahogany, from ....$2.50 to $10.00
Oak and Mahogany rockers, from ....$3.50 to $10.00
Rattan Rockers, from $3.50 to $5.00
Baking Cabinets at $8.50 and $10
Medicine Cabinets, complete with bottles, labels, etc..$3.50 and $6

When You Think of Christmas, Think of us.

DeWITT BROS., NAPINKA, MAN.

If You Buy it Here, it's Right.

Dewitt Bros.' Fine Holiday Advertisement in the "New Century," Napinka, Manitoba.

any good results out of it, you've simply got to put some brains into it. Talk through your space. Tell something. Newspaper space can be made eloquent. You can make your newspaper space eloquent if you try.

* * *

Here's where we touch on another point worthy of notice. There are lots of merchants who are fully convinced

A Sample of Good Advertising done by Stanley Mills & Co., Hamilton.

that space can be made eloquent, but whose idea of eloquence is, to say a lot of smart things, and crack a few jokes and incidentally mention their goods. That's not eloquence! Get down to business! When writing an ad. about any particular article imagine you are standing behind your counter, explaining the merits of the article to an inquiring customer. If you know English composition and are acquainted with the merits of the article you are advertising, and are endowed with a fair amount of common sense, you can turn out the kind of advertising eloquence which makes the cash register eternally tinkle. Look at the advertising space of any successful retailer of to-day, and you will have ocular evidence that the successful fill their space neither hurriedly nor foolishly, and regard it with the very opposite of indifference—with the utmost enthusiasm and confidence.

* * *

We have recently come acros a couple of good examples of bad (perhaps indifferent?) use of advertising space. The space in these cases was occupied almost entirely with a heterogeneous mass of cuts arranged in a most haphazard and confusing manner and without a word of explanatory reading matter. While these particular ads. may have drawn some business, they would have drawn much more had the space been properly used.

An example of well used space is found in the ad. (reproduced) of Stanley Mills & Company, Limited, Hamilton, which was mentioned a couple of weeks ago. This ad. brought the people in and moved the advertised goods out in a most effective manner. It is such a good, sane piece of printed salesmanship that it really needs no comment to show its good points. It is a style of advertising followed by almost every successful advertiser on the continent.

Another good ad. which was mentioned a couple of weeks ago is that of DeWitt Bros., Napinka, Man. This also is worth studying.

* * *

In connection with our announcement in the February 1st issue of Hardware and Metal of the award of the prize for the best Christmas ad. to Emerson & Fisher, St. John, N.B., a man standing high in the trade has, while agreeing with our decision, highly commended the holiday ad. of A. W. Humphries & Son, Parkhill, Ont., also shown in the February 1st issue. He pointed out that in many ways the Humphries introduction was similar to the style of advertising done by the Wanamaker stores in New York and Philadelphia, although more information is given in the latter.

McGLASHAN, CLARKE'S FACTORY.

The McGlashan, Clarke Co., Limited, manufacturers of cutlery, electro plate, and solid nickel silver flatware, whose plant is located near the centre of the city of Niagara Falls, on the main line of the Michigan Central Railroad, about ten minutes' walk from the great cataract, is one of Niagara Falls' most thriving industries. The building, as shown by the accompanying illustration, is constructed entirely of concrete, and equipped with the latest and most improved machinery, driven by electric power. Every article put upon the market by this company is made wholly in their own factory under expert supervision, and of uniformly good and tested materials. Each finished article before shipment passes through a rigid inspection, and in consequence the company are in a position to warrant every stage of the process of manufacture, their guarantee being found in every box

The McGlashan Clarke Company's Cutlery Plant at Niagara Falls.

of goods. They carry a large stock and devote their whole attention to taking care of the hardware trade, selling only to the various wholesale dealers.

The McGlashan, Clarke Co. Limited, present a strong combination of capital, experience in business management, and skill in manufacture, and are building up a large and prosperous business. The plant is managed by Lee McGlashan, who is thoroughly experienced in the line of manufacture, in which he is engaged, having had a long experience with his late father, and he has associated with him in the operation of the plant a large number of the most experienced and best trained heads of departments, and it is to their combined practical methods that the success of the company, and the high reputation which the goods are achieving is very largely due. Hardwate dealers who have not already placed a trial order for the McGlashan, Clarke Co.'s goods with the wholesale house with whom they deal, should secure one of the company's catalogues and familiarize themselves with the line before placing their orders for the June wedding trade.

Progress in Lighting

After a good spell of busy trade, the gas and electrical supply houses are experiencing a falling off in demand. There is never much doing towards the tail end of the winter. Householders do not contemplate improvements in their gas fixtures, or the installation of electric light, when they have not made up their minds whether they intend to stay on in the old habitation or not. The completion of new buildings always more or less hang fire during the winter, so that just at this time the field of operation is decidedly restricted. In addition the financial situation has not tended to improve the call this year. The embellishment of a house is not of primary importance, and when the head of the family decides on economy for the time being then the old style of lighting remains. Next month should see an improvement all the way round. With the passing away of unnecessary fear as to trade depression and lack of money, economy will be forgotten in the desire to perfect the lighting arrangements. Preparations for spring cleaning will include new fixtures, new shades, an extra light here, a stronger candle power there, and so on. Work on buildings held up by the severe weather of the past few weeks will resume with greater vigor than ever and gas and electrical supply houses will feel the revival at once. There seems to be an opinion that this year will see a falling off in large lighting contracts, owing to the shelving of many big building propositions, but if this proves to be the case—and we are not certain that it will be so—there will be no diminution so far as the smaller contracts for dwelling houses are concerned. Indications point to the fact that the demand for dwelling houses will be greater than ever, and where there is a demand the supply will make every effort to meet it.

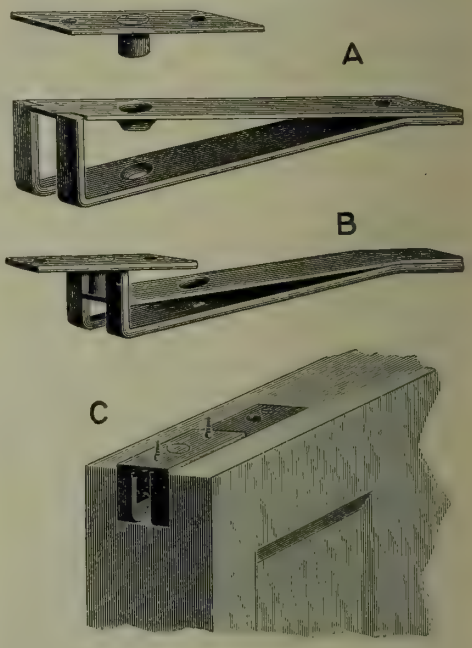
* * *

The development of artistic tendencies in the character of the lighting arrangements of to-day is evidenced from the many chaste designs that are seen in the various stores. The electrical and gas fixtures, as well as the oil lamp, are now most tasteful in design, and so many different patterns are on the market that no difficulty exists in procuring a fixture, or a lamp that will harmonize with the general effect of a room or hall. Especially is this so with electric light fittings. Of the many quaint and beautiful designs that have been produced, one of the most effective, and certainly one of the most popular at the present moment, is the square shaped fixture and globe, to match the mission style of furniture to be met with in every direction. The result of an entirely mission setting is most pleasing to the eye.

* * *

A new device to be put upon the Canadian market by Scott & Rubenstein, Montreal, is one to do away with the worry attached to bells and annunciators —the continual getting out of order of the batteries. It is impossible to place reliance upon the present system. The batteries are not guaranteed in any way, their lives may be short or long, and with their employment the electrician is constantly a visitor to the house. The new device is a low voltage transformer enclosed in a neat cast iron box which can be easily affixed to any of the electrical lighting wires of the house, thus doing away with the necessity of a battery. So long as the house is supplied with power there is no fear of the bell or annunciator refusing to act. A small incandescent lamp is fitted to the device, and acts as a trouble finder. When anything goes wrong with the circuit, the lamp lights up and it is thus easy to locate the bother. When the bell refuses to ring, and the lamp at the same time is not illuminated, then there must be something wrong with the door button, or some minor fixture. The transformer is easily affixed and is practically indestructible. It is also inexpensive, while the cost of running it is practically nothing.

* * *



A novel electrical table fitting has been patented in England. It is a self-contained arrangement designed to do away with the tangling tendencies of the usual flexible wire leads of portable fittings. The cord is contained within the base of the standard lamp wound upon a very simple form of spiral reel. Any desired length of cord can be run out from the base of the standard, and upon a release button being pressed the cord is again returned within the standard by the re-wind action of a spring. The contrivance operates like the usual spring tape measure, and its simplicity insures reliability.

* * *

Direct lighting by gasolene has made great strides recently in the States. These lamps are now used not only in the smaller communities and rural districts where facilities do not exist for a gas or electric light plant, but in cities where this competition has to be faced. The system is now considered safe, efficient and economical. A few years ago, when direct lighting by gasolene was first introduced in rather a crude state, a number of states legislated against it as dangerous. To-day all such adverse legislation has been done away with, because the light is considered as safe as any other. Statistics now prove that with the same amount of precaution used in burning other lights, gasolene is as safe to use as gas, kerosene, lamps, or electric lights. Each burner has its separate generator, which is usually placed just above the light. Heated by the light itself, the generator changes the gasolene as it passes through it into gas fit for burning on the mantles. The generator is a brass or copper tube packed with copper cable or asbestos, as the case may be, with a brass gauze attachment at the end. As the gasolene enters this tube it vaporizes and in the form of gas spreads over the mantles and makes a strong light. It is impossible for the raw gasolene to reach the mantle when burning. The gasolene tank or reservoir is placed in any part of the building, and driven by compressed air, the gasolene passes through a copper alloy tube to each light. A few strokes of an air pump, attached to the tank will make a sufficient air pressure to run the system for a period of from one to two days.

NEW DOOR HINGE.

The Standard Manufacturing Co., of Shelby, Ohio, are offering to the trade their new spring pivot for top of door which is used in connection with their "Champion" and "Standard" double acting spring floor hinges already known to the trade. With this spring pivot applied to a door the same can be set in place or taken down in the shortest space of time. Parts marked "A" in cut illustrate the two parts composing the pivot; the one showing the pivot pin which is placed in the head jam of the door frame and the other into the top corner of the door. The illustration marked "B" in cut shows how the two parts are coupled together when hanging a door; the spring is pressed down to admit the pivot pin through the slot at the edge of the door and when

the pin comes opposite the hole in the spring part it will enter and the spring will go back to its normal position, as shown in cut marked "C." The company have made application for patent on their new device and are the sole owners and manufacturers.

A NOVEL KNIFE.

Among the many new sporting articles in the market is one which is being introduced by the St. Lawrence Sporting Goods Co., Montreal. This firm is sole agent in Canada of a knife which is practically a tool chest in itself. No thicker than many a three-bladed knife, only 3½ inches in length, and weighing but 3½ ounces, the knife contains two ordinary blades, a can opener, a saw, a pair of scissors, a screwdriver, and an ice pick. Another knife, instead of having the saw and scissors, has a shell extractor for 12 and 16 gauges. The usefulness to the sporting man, and to the camper, of such a knife, not only for the tools carried, but also for its handy dimensions and chain hook, is apparent. The dealer who is on the lookout for the new ideas that constantly appear in the market, not only helps forward his sales, but attracts attention to his store.

CHANGES IN SHOPS ACT.

The new shops act introduced into the Ontario Legislature last Friday by Hon. Nelson Monteith, Minister of Agriculture, will cause much additional work for the nine provincial factory inspectors. The act provides that no children under twelve years of age may be employed in shops, and consequently these inspectors are now working under a new system. The entire province is now divided into d'stricts, and each man is assigned to a district.

In this connection it is understood the Government are considering the advisability of another amendment to the shops act, making it unlawful for boys under sixteen years of age to be employed in delivering goods with vehicles.

This section, if passed, would probably mean that a good many small grocers would have to secure delivery boys of a more mature age.

A LESSON IN SUBSTITUTION.

A group of wholesale grocers were the other day discussing how far a merchant could go in offering another line of goods to a customer than that which had been asked for.

"It is a dangerous thing," said one of them. "I learned a lesson to this effect a good many years ago. I was in a drug store waiting for my turn to be served. A customer came up and asked for Blank's pills. The kind he asked for were being cut a great deal in price by the department stores, and while the druggist was in the act of wrapping up the pills asked for, he suddenly though of a kind which had been put up for his own store and on which he made a better profit. He told his customer that he had another kind in stock which he thought were even better and could be obtained at a better price. "Haven't you any of Blank's pills?" quietly asked the customer. "I have," said the druggist. "Then give me Blank's pills," replied the customer, in a frigid tone. That druggist told me years afterwards that he had never forgotten it and was always now very careful when he offered to substitute a line of goods for that which had been asked for. "And," concluded the wholesale grocer, "I have never forgotten it either."

"After all," remarked another of the wholesalers, "a great deal depends upon the tact of the salesman when an effort is being made to offer a customer a line of goods other than that asked for."

The wise salesman always considers the good will and respect of every employe with whom he comes in contact in his customer's establishment, but this does not mean that it is necessary for him to flirt with all the lady clerks.

Too much rest means rust.
Don't overcapitalize yourself.
Don't gulp your pleasure—sip it.
In the open is the only place, after all.

CONDENSED OR "WANT" ADVERTISEMENTS.

RATES.

Two cents per word first insertion; one cent per word subsequent insertions.

Five cents additional each insertion where box number is desired.

Contractions count as one word, but five figures (as $1,000) are allowed as one word.

Cash remittances to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

RULES FOR COPY.

In addressing replies care of HARDWARE AND METAL don't fail to give box number.

Replies addressed to HARDWARE AND METAL boxes are re-mailed to advertisers every Monday, Wednesday and Friday.

Requests for classification will be followed where they do not conflict with established classified rules.

Orders should always clearly specify the number of times the advertisement is to run.

All "Want" advertisements are payable in advance.

AGENTS WANTED.

This is the problem of many manufacturers who are anxious to get a foothold in Western Canada. It will be easily solved if HARDWARE AND METAL is given the opportunity to solve it.

WANTED—Hustling agents to sell Weldarine, the only compound that will weld cast-iron, making the joints stronger than the original metal; tremendous demand. Will sell to responsible parties the rights for Ontario and Quebec. Weldarine Agency Company, D.S. Morgan Building, Buffalo, N.Y.

FIRST-CLASS English firm, manufacturing A1 line of metal polish, wishes to secure Canadian agents for Maritime Provinces, and Western Canada. Have already secured agents for Ontario, who have handled their line for nearly a year, and have found it very ready seller. For full information apply Box 690, HARDWARE AND METAL, Toronto. (4tf)

AGENCY WANTED.

WANTED ONTARIO AGENCY for stoves, hardware specialties, refrigerators, metal beds, etc., manager of a large manufacturing establishment is opening an office and sample room with storage facilities in Toronto, March 1st; has large experience, thoroughly acquainted with the trade, two traveling salesmen, and out for business. Will be pleased to interview or correspond with any firms open to be represented in above lines in Toronto and Ontario on commission. Address S. & Co., HARDWARE AND METAL, Toronto. (9)

AN old established British firm of glue manufacturers are desirous of arranging for representation in various parts of Canada. Correspondence to "Glue," care of HARDWARE AND METAL, 88 Fleet Street, London, E.C., England. (17f)

ARTICLES WANTED.

If you cannot afford to buy a new counter, show case, screw cabinet, store ladder, or some other fixture which you could use to advantage, try a "Want Ad." under "Articles Wanted," and you may get what you want at a bargain price.

WANTED—Cornice brake, 8 feet. Give full particulars with best price. Box 698, HARDWARE AND METAL, Toronto. (9)

SITUATIONS VACANT.

You can secure a "five-thousand-a-year" manager, or a "five-hundred-a-year" clerk, by stating your wants under "Situations Vacant."

SALESMAN wanted for hardware trade to carry good selling side-line on commission; give references Box 906, Galt, Ont. (10)

WANTED—An up-to-date hardware man who has a thorough knowledge of tinsmithing and furnace work; one who can work and manage either department when required, must be a hustler and not afraid of work. Apply at once giving reference and stating salary required. D. Hall Sutherland, Conora, Sask. (10)

WANTED by April 1st practical man who can superintend the erection of steel water works stand pipes and push the work along with dispatch. Must be experienced man, sober and reliable and be able to furnish recommendations from reliable firm he has worked for. Apply Box 695, HARDWARE AND METAL, Toronto. (10)

ARTICLES FOR SALE.

Don't keep any fixtures or tools around your store for which you have no further use. They are worth more to-day than they will a year hence. Don't keep money tied up which you could use to secure discounts from your wholesaler.

FOR SALE—Set of tinsmith's tools complete; great bargain for cash. For particulars write. W. A. Matthews, Cannington. (4)

FOR SALE—Set of tinsmith tools complete, great bargain for cash. For particulars write Box 132, Vankleek Hill, Ont. (7)

SITUATIONS WANTED.

Travellers, clerks, or tinsmiths, wishing to secure new positions, can engage the attention of the largest number of employers in their respective lines, by giving full particulars as to qualifications, etc., under "Situations Vacant."

WANTED—By experienced hardwareman, position in first-class retail hardware store or in wholesale house. Good Winnipeg references. Box 2, HARDWARE AND METAL, Winnipeg. (10)

A1 TINNER wants situation as traveling salesman for A1 line of stoves and furnaces; no other need apply. Thos. Hamilton, Brinston, Ont. [8]

BUSINESS CHANCES

PARTNER WANTED—To take half interest in a good new hardware and harness store; location, Saskatchewan; would like one with some experience as harness-maker, and invest about $2,000 in money; will give full particulars on application. Box 694, HARDWARE AND METAL, Toronto. (9)

WANTED—Good live hardware business in Manitoba, Saskatchewan or Alberta. Owners only. Box 22, HARDWARE AND METAL, Winnipeg. (10)

A GOOD line hardware, stove and tin business in Ontario. Box 699, HARDWARE AND METAL, Toronto. (10)

PARTNER wanted to take half interest in hardware business. Must have some hardware experience and invest $1,500. Box 688, HARDWARE AND METAL, Toronto. (10)

MANUFACTURERS of standard reputation in hardware and metal branches, who desire to be represented by New York agent, will address "Domestic and Foreign," care of HARDWARE AND METAL, Toronto. (12)

BUSINESSES FOR SALE.

Somewhere in Canada is a man who is looking for just such a proposition as you have to offer. Our "For Sale" department brings together buyer and seller, and enables them to do business although they may be thousands of miles apart.

HARDWARE, stove and tin business in one of the best manufacturing towns in Ontario; stock nine thousand; clearing two thousand yearly. Principals only dealt with. Address Box 693, HARDWARE AND METAL, Toronto. (8)

HARDWARE business for sale in live town near Toronto; established over 30 years; includes store building and tinsmithing department; good reasons for selling. Box 686, HARDWARE AND METAL, Toronto. [8]

FOR SALE—A well-established hardware, tinware and furniture in a good town in Ontario; stock about $6,000; yearly turnover about $16,000; satisfactory reasons for selling. Apply Box 681, HARDWARE AND METAL, Toronto. (8)

HARDWARE and tinware in good growing village. Stock about forty-five hundred. Turnover ten to twelve thousand, easily increased. No opposition. Building for sale or rent. Death of owner. Principals only dealt with. Box 696, HARDWARE AND METAL, Toronto. (9)

Business for Sale

AS we intend to confine ourselves to the Wholesale Hardware business in future, we have for sale our retail general hardware business. This business has been established for over twenty years and always has been and is now a profitable one. Correspondence solicited, but as it will require $10,000 cash at least to swing the transfer, we expect evidence of your good faith when you write.

MANITOBA HARDWARE AND METAL MARKETS

Corrected by telegraph up to 12 noon Friday, Feb. 28, Room 511, Union Bank Bldg, Winnipeg, Man.

Spring business, owing to the prevailing mild weather, is opening with a rush and wholesale houses are finding the volume of sales considerably larger than was anticipated two or three months ago. The outlook for new building is perhaps not so bright as a year ago, but with the early opening of spring it is expected that sales of building supplies will show a satisfactory increase. Country collections are showing considerable improvement.

Wire—Barbed wire, 100 pounds, $3.25; plain twist, $3.40; staples, $3.40; annealed wire, $2.90 base; oiled, 10c extra; bright iron, $3.10 base; brass spring wire, 32c base; plain galvanized wire, 6, 7 and 8, $3.70; No. 9, $3.25; No. 10, $3.70; No. 11, $3.80; No. 12, $3.45; No. 13, $3.55; No. 14, $4.10.

Poultry Netting—The discount is 57½ per cent.

Horseshoes—Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

Horsenails—No. 10 and larger, 22c; No. 9, 24c; No. 8, 24c; No. 7, 26c; No. 6, 28c; No. 5, 30c; No. 4, 36c per lb. Discounts; "C" brand, 40, 10, 10 and 7½ p.c.; "M.R.M." cold forged process. List Feb. 1, 1908, Capewell brand, quotations on application.

Wire Nails—$3 f.o.b. Winnipeg, and $2.55 f.o.b. Fort William.

Cut Nails—Now $3.20 per keg.

Pressed Spikes—¼ x 5 and 6, $4.75; 5-6 x 5, 6 and 7, $4.40; ⅜ x 6, 7 and 8, $4.25; 7-16 x 7 and 9, $4.15; ½ x 8, 9, 10 and 12, $4.05; ⅝ x 10 and 12, $3.90. All other lengths 25c extra, net.

Screws—Flat head, iron, bright, 80, 10, 10 and 10; round head, iron, 80; flat head, brass, 75; round head, brass, 70; coach, 65.

Nuts and Bolts—Bolts, carriage, ⅜ or smaller, 60 and 5 per cent.; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅜ and under, 60 and 5; 7-16 and over, 55; bolt ends, 52½; sleigh shoe bolts, ⅜ and under, 55; 7-16 and over, 45; machine screws, 60; plough bolts, 50; square nuts, cases, 2¾, small lots, 2¼; hexagon nuts, cases, 2¾; small lots, 2¼; stone bolts, 70 and 10 per cent.

Rivets—Iron, 60 and 10 per cent.; copper. No. 7, 36½c; No. 8, 37¼c; No. 9, 38c; No. 10, 40c; No. 12, 43c. Assorted, No. 8, 38¼c and No. 10, 41¼c.

Green Wire Cloth—$1.75 per 100 square feet.

Coil Chain—¼-in., $7.25; 5-16, $5.75; ⅜, $5.25; 7-16, $5; ½, $4.75; 9-16, $4.70; ⅝, $4.65; ¾, $4.65.

Shovels—Discounts are 40 and 5 p.c.

Harvest Tools—50, 10 and 5 p.c.

Axe Handles—Turned, s.g. hickory, $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

Axes—Bench axes, 40 and 5; broad axes, 5½ to 7½, $21.00 per dozen; 7¾ to 8¾, $23.00 per dozen; Royal Oak, per doz., $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.50; Copper King, $8.25; Columbian, $9.50; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.75; Copper King, $10.50 per dozen.

Auger Bits—"Irwin" bits, 47½ per cent., and other lines, 70 and 10 per cent.

Blocks—Steel blocks, 35; wood, 60.

Hinges—Light "T" and strap, 65.

Hooks—Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

Files—Arcade, 75; Black Diamond, 60; Nicholson's, 62½ per cent.

Locks—Peterboro and Gurney 40 p.c.

Stove Pipes—6-in., per 100 feet length, $9.25; 7-in., $10.

Tinware, Etc.—Pressed, retinned, 70; pressed, plain, 75 and 2½; pieced, 25; japanned ware, 35; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; White, 70 and 5; Diamond, 50; Granite, 60 per cent.

Galvanized Ware—Pails, 37½ per cent.; other galvanized lines 33 1-3 per cent.

Solder—Quoted at 22c per lb.

Lanterns—Cold blast, per dozen, $7; coppered, $9; dash, $9.

Churns—45 and 5; list as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

Wringers—Royal Canadian, $36; B.B., $40.75 per dozen.

Lath Yarn—10¾c.

Rope—Sisal, 10½c per pound, and pure manila, 14½c. British manila, 11½c.

Building Paper—Anchor, plain, 60c; tarred 62½c; Victoria plain 67½c; tarred 84c; No. 1 Cyclone, tarred, 81c; No. 1 Cyclone, plain, 66c; No. 2, Joliette, tarred, 69c; No. 2, Joliette, plain, 51c; No. 2 Sunrise, plain, 56c; Jubilee plain, 75c; Jubilee tarred, 88c; Buffalo plain, 66c; Buffalo tarred, 69c; Lion plain, 55c.

Corrugated Iron and Roofing, Etc.—Corrugated iron, 28 gauge, painted, $3; galvanized, $4.10; 26 gauge, $3.35 and $4.35. Pressed standing seamed roofing, 28 gauge, $3.45 and $4.45. Crimped roofing, 28 gauge, painted, $3.20; galvanized $4.30; 26 gauge, $3.55 and $4.55.

Ammunition, Etc.—Cartridges, rim fire, Canadian, 50 per cent.; American, 33 per cent.; pistol sizes, Canadian, 25 per cent.; American, 5 per cent.; military, Canadian, 20 per cent. off. American, 10 per cent. advance. Primers, $1.55. Loaded shells: English and Canadian makes, 12 gauge black soft, $18; 10 gauge, $22.50; 12 gauge smokeless, chilled, English, $24; Canadian, $23; 10 gauge smokeless, chilled, English, $28; Canadian, $27. Shot: Drop, per 100 lbs., $6.75; chilled, $7.15; buck, $7.55; 28 ball, $7.95. Powder: F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.

Iron and Steel—Bar Iron basis, $2.70. Swedish iron basis, $4.95; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel: Black Diamond, 100 lbs., $9.50; Jessop, $13.

Sheet Zinc—$8.50 for cask lots, and $9 for broken lots.

Pig Lead—Average price is $6.

Lead Pipe—Quoted at $7.25.

Copper—Planished copper, 29½c per pound; tinned, 26½c.

Iron Pipe—Black pipe, ¼-in., $2.70; ⅜, $2.85; ½, $3.75; ¾, $4.75; 1, $6.75; 1¼, $32.30; 3½, $40.50; 4, $46; 4½, $54. Galvanized: ¼-in., $3.65; ⅜, $4.50; ½, $4.50; ¾, $5.80; 1, $8.40; 1¼, $11.40; 1½, $13.80; 2, $18.40.

Fittings—Wrought couplings, 55 per cent.; nipples, 70 per cent.; classified malleable fittings, 25 per cent.; malleable bushings, 50 per cent.; malleable unions, 55 per cent.

Galvanized Iron—Apollo, 16-gauge, $4.15; 18 and 20, $4.40; 22 and 24, $4.65; 26, $4.65; 28, $4.50; 30-gauge or 10¾-oz., $5.20; Queen's Head, 20, $4.60, 24 and 26, $4.90; 28, $5.15.

Tin Plates—I.C. charcoal, 20x28, box, $10; IX charcoal, 20x28, $12; XXI charcoal, 20x28, 14.

Terne Plates—Quoted at $9.50.

Canada Plates—18x21, 18x24, $3.50; 20x28, $3.80; full polished, $4.30.

Lubricating Oils—600 W. cylinders, 80 cents; Maple Leaf cylinder, $1 per gal.; 700 A. cylinder, 75c; Sterling cylinder, 55c; 600 A. cylinder, 50c; Capital cylinder, 59c and 54c; Solar red engine, 32c; Atlantic red engine 29c; heavy castor, 29c; medium castor 28c; Ruddy harvester 30c; standard gas engine oil 36c; Renown engine oil, 38c.

Petroleum and Gasolene—Silver Star, in bbls., per gal., 20c; Sunlight, in bbls., per gal., 22c; per case, $2.45; Eocene, in bbls., per gal., 24c; per case, $2.60; Pennoline, in bbls., per gallon, 25c; Silver Light, 22c; Starlight, 20c per gal.; Sterling Light, 24c per gallon. Engine gasolene, in barrels, gal., 24c, f.o.b. Winnipeg, in cases, $2.60.

Bluestone—7c lb.

Paints and Oils—White lead, pure, $6.50 to $7.50, according to brand; bladder putty, in bbls., 2½c; in kegs, 2¾c; turpentine, barrel lots, Winnipeg, 77½c. Linseed oil, raw, Winnipeg, 67c; Calgary, 79c; Lethbridge, 79c; Edmonton, 80c; boiled oil, 3c per gallon advance on these prices.

Trade Announcements

Catalogues, booklets and other printed matter issued by manufacturers, jobbers, etc., for distribution to the retail trade will be reviewed in this department. Senders of catalogues, etc., for review should draw attention to new lines and retailers, when sending for samples, etc., should mention this paper to show that they are in the trade.

Hanger for Tinsmiths.

The Ferdinand Dieckmann Co., Cincinnati, Ohio, have issued an attractive hanger descriptive of the stove pipe and patented elbows made by tme company. The folder contains numerous cuts in addition to the descriptive matter used and is valuable for reference as to prices and styles. By mentioning this paper users of this class of goods can secure a copy for reference.

National Food Chopper.

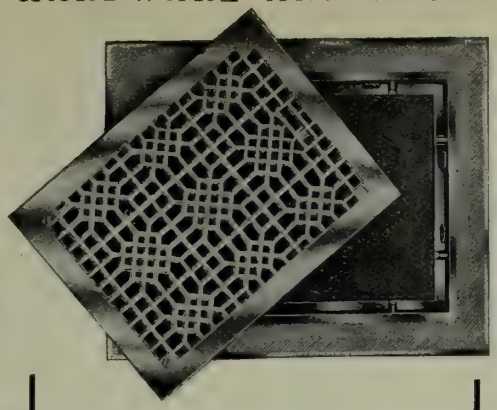
The National Food Chopper is the topic discussed by the Grace & Colwell Manufacturing Co., Syracuse, N.Y., in an attractive booklet. The work is carefully compiled and contains cuts of the different choppers and parts manufactured by the above company. At the back of the booklet a number of

reasons are given which prove the success of the National Food Chopper. Mention this paper when sending for a copy.

Paint Folder.

The Canada Paint Co., Limited, Montreal, have issued a small folder, bearing the picture of a young lady returning in an automobile from purchasing a can of the company's paint. On the insides of the folder a number of the company's brands are described. The folder will be helpful to retailers selling their company's lines.

Hardware Specialties.



An attractive catalogue has recently been received from the Forsyth Manufacturing Co., Buffalo, which deals with bath room accessories, molding, hooks and garment hangers manufactured by this firm. The book is attractively compiled and contains numerous cuts with descriptive reading regarding each line shown. Copies of the catalogue will be sent on request by mentioning this paper.

Vises and Tools.

A handsome catalogue has been issued by the Reed Manufacturing Company, Erie, Penn., describing lines of machinists' and woodworkers' vises, dies, pipe cutters, pipe taps, pliers, wrench and mowing machines made by this company. The book is well edited and the descriptive matter is shown up by numerous attractive cuts. A special feature of the catalogue is a handsome cover which shows a mechanic at work in the shops. The figure is raised and lies against a background of gilt which gives an attractive appearance.

McClary's Spring Catalague.

The McClary Manufacturing Company, London, have issued a new spring catalogue which contains a completed list of the company's numerous manufactures and incidentally marks the sixtieth anniversary of the firm. The new catalogue contains 98 pages more than any previous issue and each page is attractive and contains cuts of all goods described. A special feature of the new book is the simple manner in which each different line may be found, it being arranged with a thumb index which marks the pages used for the display of each individual line. Another good point about the catalogue is the arrangement of the cuts long the outside margin of each page thus giving the book a much more uniform appearance than if scattered over the pages. There are 17 different departments to the book which should prove invaluable to all hardware merchants, stove dealers and plumbers. The McClary Company have also issued two separate booklets, one giving details on the company's gas stoves and ranges and the other describing "Samson" brand milk cans and can trimmings. Any or all of the catalogues will be sent on request by mentioning this paper.

"Short Notice" Orders

are our specialty.

¶ We have in stock all sizes and styles of floor registers and borders for warm air—flat and convex faces for cold air. The above cut shows our handsome

"Standard" Register

¶ Black Japan is the usual finish, but you may have them in any special finish desired.

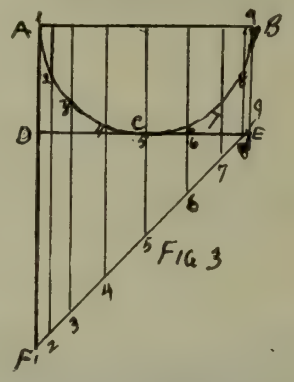
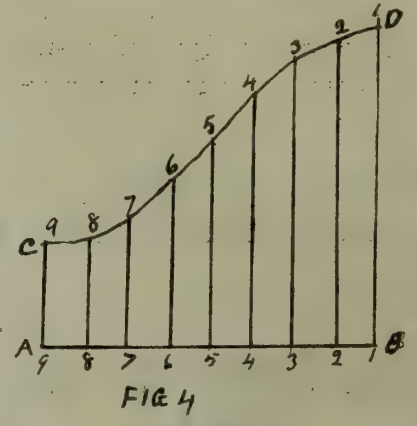
Cutting Patterns in the Tin Shop

Readers of Hardware and Metal Are Requested to Make Use of This Department. Questions Regarding Patterns Will Be Answered by Experts Discussion is Also Invited on Any Matter Pertaining to the Tin Shop.

MITRE JOINTS FOR GUTTERS.



To describe a pattern for a mitre joint for an O.G. gutter at right angles let "A.B.C.D." (Fig. 1) be the given gutter. Divide the curved line "B.C." into any number of equal parts and from these points draw lines parallel to "A. D." as 1, 2, 3, etc. Then set off the right angle line "A.B.E." (Fig. 2) and make "B.F." (Fig. 2) equal to "A.B." in Fig. 1. Draw the line "C.F." parallel to "A.B." and make "A.B." and "C. F." (Fig. 2) equal in length to "A.D." (Fig. 1) and draw the line "A.C." Make "F.D." (Fig. 2) equal in length to the curved line "B.C." (Fig. 1) and set off on the line "F.D." (Fig. 2) the same

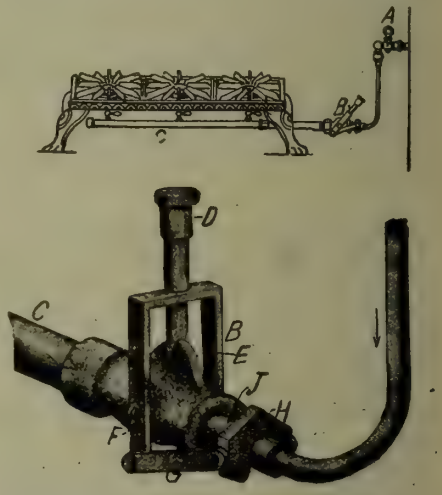


number of equal distances as there are in the curved line "B.C." (Fig. 1). From the points draw lines parallel to "C. F." as 1, 2, 3, etc. Make "C.F." (Fig. 2) equal to "B.E." (Fig. 1), also each of the parallel lines bearing the same numbers, as 1, 2, 3, 4, etc. Make "D. E." (Fig. 2) equal to "C.D." (Fig. 1). Then a line traced through the points will form the pattern.

Joint for Semi-circular Gutters.

To describe a pattern for a mitre joint at right angles for a semi-circular gutter, let the semi-circle "A.C.B." (Fig. at right angles for a semi-circular gutter. Draw the line "A.B." Draw the lines "A.F." and "B.E." at right angles to "A.B." Draw the line "D.E." parallel to "A.B." and make "D.F." equal to "A.B." and draw the line "F.E." Divide the semi-circle into any number

of equal parts and from the points draw lines parallel to "A.F." as 1, 2, 3, etc. Then set off the line "A.B." (Fig. 4) equal in length to the semi-circle "A.C. B." (Fig. 3). Erect the lines "B.D." and "A.C." at right angles to "A.B." Set off on the line "A.B." (Fig. 4) the same number of equal distances as there are in the semi-circle (Fig. 3). From the points draw lines parallel to "B.D." as 1, 2, 3, etc,, and make "B.D" (Fig. 4) equal in length to "A.F." (Fig. 3), and "A.C." (Fig. 4) equal in length to "B.E." (Fig. 3). also each of the parallel lines bearing the same numbers as 1,



2, 3, 4, etc. Then a line traced through the points will form the pattern required.

W. M. M.

Too many dealers think the range and cook business is ended for the season. It never ends. You can sell ranges twelve months out of the year if you work.

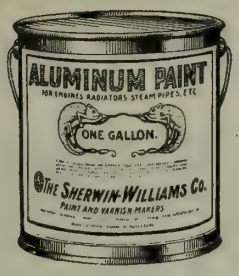
SAFETY CONNECTION FOR GAS STOVES.

The customary method of connecting a gas stove with the gas supply pipe by means of a flexible tube is open to serious objections. The connections are apt to work loose, or the rubber deteriorates, causing a leak, and when the gas is turned off at the stove the pressure in the tube is liable to force one or the other of the connections off its nipple, allowing the gas to pour into the room. Furthermore, the flexible tube is liable to come into contact with the hot stove and be burned. To obviate these difficulties, it is proposed to use a metallic connecting tube, and a recent invention provides a simple means for connecting this tube at one end to the the service pipe and at the other to the stove. In the accompanying engraving the connecting pipe is shown attached to the gas supply pipe by means of a swivel coupling (A) of well-known type. At the opposite end the pipe is coupled to the supply pipe (C) of the gas stove by means of a simple mechanism (B). A nipple formed with a tapered opening is threaded on to the pipe (C). Pivoted to this nipple is a bifurcated lever, proviaed with a central pin which is adapted to engage a cam (E) formed on the nipple.

Safety Connection for Gas Stoves.

The lower ends ((F) of the lever are connected by links (G) to a yoke (H). The latter bears against a shoulder on the tapered head (J) of the connecting pipe. By swinging the lever (B) toward the right, as shown in the engraving, the crosshead (H) draws the head (J) into firm contact with the nipple, thus coupling the connecting pipe on the stove supply pipe. The pin which bears on the cam (E) is pressed into engagement therewith by means of a spring in the cap (D). The cap is threaded to the shank of the lever, so that it may be adjusted to regulate the tension of the spring. It will be evident that this method of coupling prevents the parts from working loose, and to avoid tampering with the coupling the cap (D) may be firmly screwed down, so as to exert a strong tension upon the pin and

make it difficult to throw the lever to the release position. The inventor of this gas connection is Herman E. Loebe, 49 Greenville avenue, Jersey City, N.J.



DAMAGED STOVE SHIPMENTS.

Once in awhile the retail hardware dealer finds a shipment of stoves down at the depot in a damaged condition. Stoves are built to stand all the hard usage they can possibly get in the kitchen or wherever they are set up but sometimes the freight handlers are too much for them. They are subjected to strains which they were never intended to withstand and when the drayman drives down to take them up to the store he finds them in bad order.

When this occurs don't get mad at the manufacturer. It is not his fault. The dealer who is not well posted as to the responsibility for shipments will in many cases refuse to have anything to do with stoves which arrive in a damaged condition. He returns to the store and writes the manufacturer that the stoves are damaged and he will not receive them and that it is up to the manufacturer to take charge of the shipment. The proper thing to do is to immediately receive the shipment, having the agent make a proper notation on the expense bill of the breakage. The necessary repairs should then be ordered from the factory and when they are received the stoves should be put in good condition, an account being kept of the labor necessary to repair them.

The amount of freight paid on the repairs should be added to this and a bill presented to the railroad company for the full amount of the damage. The two expense bills, one showing the condition of the shipment when it reached its destination and the other the freight paid on the repairs, should be attached to the claim. The railroad companies will entertain such a claim. If the merchant prefers to have the claim handled by the manufacturers he can send the necessary papers to them and they, through their claim department, will usually handle the matter in the most expeditious manner.

There are some merchants whose minds are not quite clear as to responsibility for shipments. Your goods are bought f.o.b. place of shipment. They are delivered to the buyer at place of shipment. Title of the goods passes to the buyer as soon as delivery is made to the carrier, and the carrier is an agent of the buyer to deliver or carry these goods to him. When goods are sold f.o.b. there is no presumption that the seller is to place the goods in the buyer's store or depot of his town, or that he is in any way responsible for safe delivery. His responsibility ceases upon obtaining a clear receipt from the transportation company of a delivery to them of the goods in good condition.—Hardware Trade.

Aluminum Paint is a Good Spring Seller

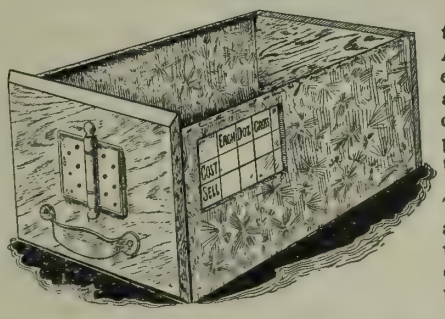
When housewives do their "Spring House-cleaning" they want to brighten up radiators, hot air registers, gas and electric light fixtures, steam and water pipes, water boilers, furnaces, stoves, mail boxes, picture frames, etc.

Here's your opportunity. Urge them to brighten these things up with a coat of

SHERWIN-WILLIAMS ALUMINUM PAINT

Tell them how they can make these things look bright and clean at a small outlay of time and money. Have a little Aluminum Paint Campaign—advertise—trim your windows—talk the goods—display them on your counters—*all at once*. *You* tell the people how little money it costs to brighten up the little things, if they come to *your* store—and watch business grow.

Be sure to have plenty of Sherwin-Williams Aluminum Paint in stock.



THE SHERWIN-WILLIAMS CO.

LARGEST PAINT AND VARNISH MAKERS IN THE WORLD

Canadian Headquarters and Plant: 639 Centre St., Montreal, Que.
Warehouses: 86 York St., Toronto, and Winnipeg, Man.

Cameron & Campbell, - Toronto, Ontario

Making and Recording Estimates

The Advantages of Using More Care and Accuracy Emphasized by Arthur W. Massy, An Architect in Building Management.

Assuming that as a class contractors are thoroughly practical experts, let us consider what supplementary assistance consisting of books, etc., is at their command, as an adjunct to their practical knowledge and experience, which will help and guide them in making a complete and safe estimate of each and every item of material and labor.

First, there are excellent and valuable books in the market on the subject of estimating, written by men of acknowledged ability and experience. These works treat upon all the various materials required in the construction of a building, from the foundation to the finals on the roof. They teach how to compute the quantity of material required in any one item of work, and also how many hours or days of labor will be required to complete that one item. The price of materials and labor is purely a local matter.

Second, there are also a great many valuable technical books, trade journals, etc., published, treating upon the principles of mechanical construction work, etc. From these they obtain very valuable information upon the various problems of general building construction, assisting them in performing many of the intricate and difficult mechanical operations connected with modern buildings (which are continually coming up to perplex the expert contractor), in the most economical, expeditious and successful manner. Especially is this true of the various trade journals, for they certainly lend the contractors far more real and valuable assistance than can come from any other source, because they bring them in constant touch with most approved, up-to-date and practical methods, data, etc., together with an exchange of appreciated new ideas, new experiences, in meeting practical building problems, from men in other fields of building activities, where the market conditions of materials and labor are different.

Third, in addition to those publications, there are thousands of valuable labor-saving catalogues, issued by the various manufacturing establishments throughout the country, which can be obtained gratis for the mere application for a copy. Many of these catalogues are really works of art; some contain additional technical information, tables, etc., which are useful to the contractors, and nearly all contain some fine descriptive illustrations and styles, patterns, with a price, and a catalogue number accompanying each article or class. These are intended to assist buyers in ordering goods, and in getting estimates on such materials as may be required, and also to prevent mistakes and confusion which might occur in a long written description of the ordered goods. And also by the use of those numbers, and telegraphic codes they are saved hours of tedious labor in writing long descriptive letters of articles wanted.

Some of the above class of publications, and many more besides, may be found in the office of every contractor.

With this valuable data always at hand to help and guide them in making an estimate, for saving so much of their time, and supplemented by the personal practical experience of the contractors, it would seem that it would be almost impossible for an experienced contractor to make a mistake on the wrong side of a contract, or at least a serious one.

It is a well known fact among architects and builders from Maine to California that where several contractors are estimating on the same work, from the same plans and specifications, and under the same local conditions, no two estimates are alike. Again take the same parties estimating on another job and under similar conditions, those who were too high in one case will be too low in another, and vice versa.

This clearly proves that the discrepancies and differences between estimates by the same contractor, are not due to mere casual mistakes, which may occur to anyone, or to inexperience or incompetency, because they may and do occur among the more intelligent, as well as among the less informed contractors. But it most certainly does prove that carelessness is more responsible for failures than anything else, because they do not give themselves sufficient time to calculate all of the individual items of materials, labor, cartage, etc., and their cost. Consequently they resort to clustering a number of items together under one head, allowing so much for possible materials, and so much for possible labor, and which is they trust too much to memory, resulting in repeating or omitting many important items, because they become confused and uncertain as to whether they had, or had not calculated them. Another item which often escapes their memory is cartage, which includes freight, etc. These items often amount to considerable, during the course of the construction of a building, and need careful consideration like other matters of cost.

HOW HAMMOCKS ARE MADE.

Before the advent of labor-saving machinery the making of a hammock was something of a task, and the finished product more serviceable than ornamental, writes G. F. Ellsworth, in the Sporting Goods Dealer. Armed with mesh stick and needle, the workman would proceed to laboriously net line after line of mesh, after which the hangers would be attached by hand. The operation resulted in a hammock that would hold a Jumbo, but from an artistic standpoint left much to be desired. In the towns along the coast practically every man, woman and child understood "netting" and if a hammock was found to be needed, it was manufactured at home during the long winter evenings. It requires more patience than skill and at a cost of a couple of dollars any one can construct a hammock that will last several generations.

The artistic, salable article of the present day, with its bright colorings, attractive curtains and comfortable headpiece, is turned out in large quantities at the rate of about 45 minutes per hammock, and is quite an interesting operation. Before taking up the mechanical process, we might say that hammock manufacturers generally put out from ten to a dozen new designs each season. The number of colors to be used is entirely at the discretion of the designer, four or five being a fair average, and a line of sixteen numbers, varying in price from about $4.50 to $36, will give some faint idea of the opportunity afforded the buyer to pick and choose. In addition to the regular lines, priced as above, most factories have a demand for a cheaper grade of goods, upon which, however, they rarely put their trade mark. The reason for omitting their sign manual is obvious and need not be dwelt upon at this time. The difference in prices is affected by the weight of the yarns, the intricacy of the design, the valances, the pillow, etc., etc. The sense of touch is sufficient to allow even a novice, entirely unfamiliar with the business, to distinguish the various grades, as weight and weave are very important items in figuring cost. Before proceeding with the actual manufacture of a hammock, the yarns, which are bought uncolored, must be dyed in the various shades and colors called for by the design. This is done in large vats, about the size and shape of a watering trough. The dye was first mixed thoroughly in a pail, and then poured into the vat, after which the yarns were thrown in and allowed to soak for an hour. The yarn is then removed from the vat to a drying room, hung on poles and allowed to remain there in a dry, warm atmosphere for three or four days. After the skeins are dry the work of winding upon spools and bobbins commences. Right here we are introduced to a near-human machine which winds fifteen or eighteen bobbins at a time, and immediately and automatically stops when any one bobbin is full, continuing the remaining bobbins until they too are full. The rigging of the loom with all the colored yarns to be used in that particular hammock must be appreciated. It requires skill and experience to do this properly, after which the loom is started and the bobbin, dancing from side to side, rapidly, untiringly, soon shows us the design in all its beauty. Here the machine is stopped while the designer takes a look at his handiwork. If all is well the loom is again started, and in a comparatively short time the body of the hammock is completed. A first-class hammock is made with a four-ply warp and a three-ply web, though there is considerable difference of opinion on this subject, and some manufacturers claim that a good article can be made with a three and two-ply combination. At all events it is generally admitted the warp and web mentioned is all right. In the better grade of hammocks the valances are made separately and sewn on. When this is done the two are made at once, a knife in the centre of the loom cutting them apart as fast as they are completed. It is possible to make the hammock and both curtains on the same loom, though this is not generally done, except for the cheaper lines. The weaving having been finished, the end cords are attached, the pillow and valances sewn on and the hammock is ready for inspection by a man employed for this work, and shipment.

It's better to be fresh than stale—but don't get too fresh.

THE WANT AD.

The want ad. has grown from a little used force in business life, into one of the great necessities of the present day.

Business men nowadays turn to the "want ad." as a matter of course for a hundred small services.

The want ad. gets work for workers and workers for work.

It gets clerks for employers and finds employers for clerks. It brings together buyer and seller, and enables them to do business, though they may be thousands of miles apart.

The "want ad." is the great force in the small affairs and incidents of daily life.

IVER JOHNSON
SAFETY AUTOMATIC REVOLVER

You Must Pull the Trigger

or there will be no discharge. This is the *one* revolver that cannot go off by accident. We make the kind that discharges when you want to shoot and not before. One million six hundred thousand have been sold and not an accidental shot. As handsome a revolver as is made; in a number of styles and several sizes. As safe as a spiked cannon, but as full of business as a hornet's nest.

BUILDING AND INDUSTRIAL NEWS

For additional items see the correspondence pages. Information is solicited regarding building and industrial news, the incorporation of companies, establishment or enlargement of mills, factories or foundries, municipal water works and sewerage systems, railway or mining news, etc.

Industrial Development.

The new dam at Chaudiere Falls will be built this year at a probable cost of $150,000. The dam will be constructed of concrete and steel.

The Dominion Bridge Company, of Montreal, has secured the contract for the steel superstructure of the Redwood bridge across the Red River at Winnipeg. It is expected the work will be completed by next fall.

The annual meeting of the Durham Cement Company was held at Toronto this week. The meeting proved stormy for various shareholders but ended in the re-election of last year's officers. A dividend of 5 per cent. was declared.

The Dominion Iron and Steel Company, of Sydney, C.B., which has recently purchased the iron mines at Lepreaux from the New Brunswick iron Company, may build a smelter at Lepreaux this year. The mines will be worked to their fullest capacity.

The International Cement Co. held their annual meeting at Ottawa this week. The treasurer's report shows gross earnings for the year to be $269,022.51, out of which a dividend of ten per cent. was declared. The output of the works will be increased to 2,600 barrels per day.

Building Notes.

R. Lankin, Toronto, will erect residences to the value of $6,500.

A new Central School will be erected at Paris this year to cost $45,000.

The Baptists of Hamilton will build a new church this year to cost about $20,000.

The Roman Catholics of Belleville have made arrangements to build a $40,000 school building.

Wesley Methodist College, Winnipeg, will build a new ladies' building this year to cost $100,000.

A new Y.M.C.A. building will be erected at Vancouver in the near future at a cost of about $250,000.

The Salvation Army, Toronto, will make alterations on dwellings situated on Church St., at a cost of $4,000.

The Ontario Powder Company have started rebuilding the plant at Tweed, which was destroyed some weeks ago. The new buildings will cost about $25,000.

Railway Construction.

Col. J. M. Gibson, Hamilton, stated this week that an underground route for the proposed radial railway into Toronto was preferred, although the cost would be about $2,400,000.

The piers for the new C.N.R. traffic and railway bridge at Prince Albert are almost completed, and it is expected that this part of the work will be finished by March.

The Dominion Atlantic Railway will construct a branch between Canning, N.S., and a point north of Berwick. The branch will be known as the Northern Mountain division of the above road.

A new railroad, the Quebec & Saguenay connecting St. Anne de Beaupre and Tadousac, a distance of 120 miles, will be started this year. A syndicate composed chiefly of Montrealers, with a capital of $5,000,000, has been formed to construct it.

Companies Incorporated.

The Gillette Safety Razor Company, of Canada, has been incorporated with head office at Montreal, to manufacture all parts used in the construction of the company's razors. The capital stock of the company named is $250,000.

The Canadian Crocker-Wheeler Company, Limited, with head office at Montreal, has been incorporated with a capital stock of $250,000. The company rights include the manufacture from metals of all lines of hardware, machinery and farm implements.

The Oneida Lime Company, Limited has been incorporated with a capital of $20,000, to manufacture and place on sale lime, cut stone and all kinds of building material. The head office of the company will be at Hamilton and the provisional directors named are: Walter Anderson, Alfred Ward and W. B. Anderson, all of Hamilton.

The Soo Copper Co. Limited, has been incorporated to mine copper in the Algoma district near Sault Ste. Marie, Ontario. The new company already hold property in the above district and have a capital stock of $1,000,000. The head office of the company will be at Windsor, Ont., and the provisional directors are: E. M. Day, A. C. Peoples and C. E. Day, all of Detroit, Mich.

The Loughborough Mica Company, Limited, has been incorporated to deal in minerals and to buy and sell mineral properties. The head office of the new company will be at Toronto and the provisional directors named are: E. J. Dignum, A. S. Rogers, L. E. Auston, William Williamson and Henry W. Williamson, all of Toronto. The capital stock of the new company is $20,000.

The Imperial Stove Works, Limited, has been incorporated and will engage in the manufacture of stoves, furnaces, gas and electric stoves and heaters and agricultural implements. The head office of the company will be at Morrisburg and the provisional directors of the company named are: Andrew Broder, Salem Coons, Irwin Hilliard, William Duke and James Ferguson, all of Morrisburg.

A HARDWARE TRAVELER'S IDEAS.

"Traveler," Toronto, writes: I feel deeply interested at the questions asked and how they were answered at the Ontario Retail Hardware and Stove Dealers' convention, and also the way Hardware and Metal has written it up.

"I know for a positive fact recently where a traveler for a large wholesale jobbing hardware house went into a town of about 3,000, and sold a druggist his paris green, and also called on the other druggists in the same town and offered this commodity for sale. I know of another instance where another large wholesale hardware jobbing house called on a painter who has a small wall paper store and booked him a single barrel of boiled oil; still another case is that of a plate glass company's traveler selling two plates of glass for doors direct to the builder, and then called on the hardware merchant and wondered at him not wanting to buy from him. This state of affairs is very exasperating.

"On the other hand, some retail dealers (who are generally price-cutters themselves) will ask a traveling man, (especially if he is new on the road) a price on a certain article, and then when he quotes the price, he will say, I can buy ¼c better, just to see what kind of material the traveler is made of. Some travelers, I am sorry to say, are very thin-skinned on this point, and afraid the other fellow will get the business.

"Another bad habit is for a traveler to call on a retail dealer and guarantee a price so that he may secure the order. The merchant should be protected up to a certain point. For instance, a jobber buys ten carloads of wire (and the traveler has guaranteed the price) and he goes out and sells this wire and the price drops ¼c a pound, and the retailer comes back at the jobber and wants a rebate, he stands to lose a lot of money. I think the retailer should stand to lose his share, the same as the jobber.

"I saw a booked order for a certain line of goods recently, the first size being given about 7c above cost, and below prices guaranteed for all other sizes. This kind of business, I claim demoralizes trade and the man who stoops to do this kind of thing is not a traveler, but a peddler. No legitimate wholesale merchant will take advantage of a dealer, nor will they allow their travelers to do so. Some of the finest and best business men the country can produce travel the road and offer goods for sale.

"What is the matter with the hardware travelers getting together and forming a little association of their own and getting better acquainted with each other, and to try and maintain prices better in the future. We lack confidence, but I am sure Hardware and Metal will give us every possible assistance."

News of the Paint Trade

PAINT PROFIT AND FASHIONS.

The development of the means for handling paint have changed to a large extent in the past few years.

The old methods of handling paint, whereby a dealer kept an open keg of lead on hand and mixed up a quart or a gallon or whatever was wanted for a customer, which meant loss of time, often loss of temper, soiled hands and clothes, and no profit, have been displaced by machine-made paint, scientifically combined and made in a variety of shades covering a complete range of color combinations, put up in attractive sealed packages of different sizes.

There is a legitimate profit in selling this product and you have an opportunity to build up a business which you can enjoy in future years, as the prepared paint manufacturers generally appoint one dealer in each town as their exclusive agent and his sales rights are protected accordingly.

Mail order competition is a very important point for every dealer to consider. In some sections mail order houses are encroaching upon the dealers' business to a serious extent. The dealer who has spent years in building up a good substantial business, is not going to stand idly by and see outsiders take away the business that rightfully belongs to him. The support of a progressive, up-to-date manufacturer, with his sales assistance, advertising matter, and the education he is anxious to convey to the dealer in order to make a better market for his products more successfully by helping them gain a proper knowledge of their uses. This is of the greatest importance, not only in helping the dealer to successfully combat the competition of the mail order houses, manufacturers and jobbers doing business direct with the consumer, but also in increasing his business from year to year.

Now is the time for dealers, looking ahead to the future of their business, to consider all these points well. The manufacturer who assists you to promote your business, which means making more dollars every year, and who gives you a square deal in the way of quality and protection, is entitled to your greatest support and loyalty.

Styles or fashions, either consciously or unconsciously, permeate our whole existence. This applies not only to the present generation, but goes away back into the dark ages. Fashion rules the universe with a strong hand. We feel the need of following the lead of others in order to be up-to-date and alive.

Styles and fashions appeal to women with peculiar force—it is part of their lives. This is particularly exemplified by their dress. Once the style is set, a woman, or a man for that matter, is just as particular about the dress of the home as their personal dress. There are proper and improper ways of dressing the exterior of a home. As an outcome of many conferences, several color schemes or combinations best suited to different styles of architecture have been selected and will be exploited by paint manufacturers as the proper styles in painting for 1908.

Have You Got It?

There is full IMPERIAL MEASURE in every tin of ELASTILITE VARNISH we send out, and there is overflowing measure of good results to the merchant who sells it. It always pleases your customers, whether used on inside or outside work, and brings them back, not to grumble, but for more Varnish, and more of something else you sell.

Paint and Oil Markets

MONTREAL.

Montreal, Feb. 25.—The better conditions noted in our last week's issue seems to continue, and the grinders and manufacturers report a far better feeling in all classes of material. More life seems to be infused into trade generally, and it is thought that business will be fairly brisk for some time to come.

Turpentine—Nothing has developed to affect the quotations for this article and seeing that it is now about 25 per cent. cheaper than at this period last year, buyers show unusual hesitancy in filling their requirements. We continue to quote: Single barrels, 75c; wood distilled turpentine, pure, 69c.

Linseed Oil—With the approach of spring some good shipments are being made. The market holds remarkably steady under the improved conditions which now exist. We continue to quote: Raw, 1 to 4 barrels, 57c; 5 to 9 barrels, 56c; boiled, 1 to 4 barrels, 60c; 5 to 9, 59c.

Ground White Lead—Lower figures on some brands of pure lead owing to keen competition have done much to encourage buying, only, however, in a small way for immediate shipment, but some heavy bookings are reported for April and May. To meet prevailing conditions quotations have been cut 25c, and we now quote Government standard, $6; No. 1, $5.75.

Red Lead—Some fair orders have been placed. Prices are firm as stocks are not over abundant. We continue to quote: Genuine red lead, in casks, $5.75; in 100-lb. kegs, $6; in less quantities at $6.75 per 100 lbs.; No. 1 red lead, casks, $5.50; kegs, $5.75, and smaller quantities, $6.50.

Dry White Zinc—Slightly higher figures are being quoted in Belgium, but they are not sufficient to warrant any change in local quotations. For the present we continue to quote: V.M. Red Seal, 7½c; Red Seal, 7c; French V.M., 6c; Lehigh, 5c.

White Zinc Ground in Oil—There is no feature to note in this article. Shipments are very quiet, and inside decorating does not seem to be followed up vigorously during the cold weather. We quote: Pure, 8½c; No. 1, 7c; No. 2, 5¾c.

Varnishes—Varnishes in packages are meeting with a better inquiry, being included in liquid paint shipments. Varnishes and japans for factory purposes seem to be quiet, and the manufacturers are still buying with great caution.

Putty—Putty is in light demand, only occasional shipments being made at the following quotations: Pure linseed oil putty, bulk, in 800-lb. casks, $1.75; in 25-lb. iron drums, $2.05; in 25-lb. tins (3 in a case) $2.15; bladder putty, in barrels, $1.95.

TORONTO.

Toronto, Feb. 26.—Business throughout the country is fair and booked orders continue to improve. The market, as a consequence of keen competition, is a little unsettled and keen competition has led to a revision of prices in several important commodities. This state of affairs is not expected to last more than a few days, as with March orders for spring delivery should assume such proportions that any existing price-cutting will be stopped.

Turpentine—Prices quoted by jobbers and importers vary to the extent of 5 cents. Reports, however, from the south show an advance and local authorities are of the opinion that turpentine will soon regain the firm price which has characterized the market for some time. Stocks in Toronto are still low and shipments are arriving but slowly. The reductions quoted should tend to increase orders for spring business. We quote single barrels 72c. Less than barrels, add 5c per gallon.

Linseed Oil—This commodity is not much in demand at present, and competition for orders has resulted in a temporary reduction of prices. No changes have taken place in prices at the sources of supply and stocks are low. Shipments are arriving slowly and a sudden demand would exhaust the supply. We now quote: Single barrels 58c; 2 to 3 barrels, 57c; 4 to 9 barrels, 56c. Add 3c to this for boiled oil, f.o.b. Toronto, Hamilton, London, Guelph and Montreal. Terms net, 30 days.

White Lead—The demand shows some improvement during the week, and prices continue firm. The stocks at present are low, but shipments are expected in the near future. We still quote; Genuine white lead, $6.25; No. 1, $6.

Red Lead—Prices remain firm and a fair amount of orders for spring delivery are coming to hand. Stocks are in good shape at present, and quotations remain: Genuine, in 100-lb. kegs, $6; genuine, in 560-lb. casks, $5.50; No. 1, $5.

Petroleum — The demand continues steady throughout the country and no changes in prices have occurred. Quotations remain: Pratt's astral, 17½c; water white, 15c, and prime white, 13½c.

Glass and Putty—There is no demand for glass and a revision of prices is expected. Putty is firm and orders for future delivery are satisfactory. Prices of putty remain: Bladders, $1.95 per 100 lbs.; less than barrels, $2.10 per 100 lbs.

Shellac—Prices are steady, and a good business for future delivery is under way. Prices remain: Pure white, in 5-gallon lots, $2.25; pure orange, $2, and No. 1, orange, $1.90.

Varnish—The demand is slow, but prices remain firm. Quotations are as follows: No. 1 furniture, in barrels, 65c; elastic oak, in barrels, $1.25; light hard oak, in barrels, $1.05.

ONLY APPLIES TO STATES.

The announcement made last week that the Sherwin-Williams Paint Company intended making a change in their method of packing paints was written in error, the change not applying to Canada, where the company has always sold their paints in paste form on a net weight basis, their process of weighing each package as it is being filled ensuring full quantity, both in bulk and weight. The February issue of S.-W.P., from which last week's article was taken, outlines the reasons for the change in the United States, experience in Canada having warranted the more extensive adoption of the system of packing used at present at the Montreal S.-W. P. plant.

FRANCIS C. REYNOLDS, Can. Manager.

Welland, Ont.,
Jan. 25th, '08.

Messrs. Benjamin Moore & Co., Ltd.
Toronto Junction, Ont.

Dear Sirs:

In reply to yours of the 21st., I beg to enclose our card. We have both been working for Messrs. Racher & Hyatt for some time, but are now starting for ourselves, hoping to work up a first class business in House Decorating. I have used two barrels of your White MURESCO this past season, tinting the same to required shades, which has given general satisfaction—the new Bank of Nova Scotia building here, for instance, and through that expect to get contract for the walls, etc., of the Town Hall.

Yours truly,
ROBINS & GRIGGS.

YOU can sell "MURESCO" to all the painters in your locality, and make them your constant customers.

Benjamin Moore & Co. Ltd.

New Office and Works: Toronto Junction, Canada.

Makers of the "Island City Paint"—The Paint of Quality

WORLD'S LINSEED OIL MARKETS.

All available reports confirm the previous estimates on the increased acreage of flaxseed in Argentina. It is believed that the acreage this year is nearly 400,000 acres more than last year and 1,000,000 acres in excess of 1905-6. Despite all damage to the crop by weather, the surplus for export is sure to be very large—probably not less than 1,000,000 tons, which is an increase over the preceding year of about 12 per cent. This is the more significant as it is a comparison with a previous large year.

To counterbalance the big crop prospects in Argentina there is the decrease in the Indian seed crop as indicated by the despatches. What with a smaller acreage and poor condition the Indian crop may not afford more than 50 per cent. of its last year's export surplus. Probably the decrease in India will offset the increase in Argentina, but at any rate, there is not likely to be much difference from last year. In fact, Beerbohm, in his latest estimates, allows only 200,000 tons of seed to come from India in 1908 and 150,000 tons from Russia and America, so that if Argentina ships over a million tons there may be available in Europe a total of 1,450,000 tons, or 100,000 tons more than were absorbed by Europe in 1907.

The seed situation is of interest only as it concerns the oil markets, and vice-versa. In this instance it seems that the supply of seed will control the price of oil, but there is another and important factor in the present condition of the European oil market, which must be taken into consideration. Last year cottonseed and other oils were so much higher than linseed oil that the latter was at an advantage in European markets and oil consumers generally were enabled to absorb large quantities of linseed oil for purposes for which cottonseed oil is generally used. This year conditions are reversed and cottonseed oil is cheaper. That fact will be sufficient to account for a decreased demand for linseed oil and a correspondingly smaller outlet for flaxseed, with tendency to lower prices. It is only one factor in the situation but is a bear factor at best.—Paint, Oil and Drug Review.

GRAPHITE PAINT IN INCREASING USE.

Within the past decade there has been a radical change in the color of the coatings applied to railroad bridges, viaducts and other steel structures for the purpose of protecting them from corrosion and the elements. The change has been from reddish brown to grayish black. The reason for this, it is claimed, is that the most exhaustive research, theoretically and practically, has disclosed the fact that the natural form of carbon, graphite, is now recognized as the pigment best meeting all of the many and varied requirements essential to the production of paint that will effectually protect under all conditions the surface which it covers.

Graphite is an inert substance, absolutely unaffected by extreme heat, frost, steam, water, sulphur fumes, acids, alkali, brine or, in fact, by any climatic or chemical condition. These properties, together with its natural affinity for oil, its density, the ease attending its application and the resulting saving of labor, its remarkable covering power and the consequent reduction in first cost and last, but not least, its long life, which eliminates the annoyance and expense of frequent repainting render it the ideal paint for either the primer or weather coats. But to give this service in the greatest degree it must be pure, finely pulverized and thoroughly ground in the best of linseed oil.

SELL WALLPAPER NOW.

It is now time to give consideration to wallpaper. Why not do something to stimulate early buying in this department? Many persons are now planning the remodelling of their homes, and it would seem to be reasonable to assume that they would be interested in wallpaper.

There is no feature in a room that has such a happy influence as a suitable, well-selected wallpaper in colors that harmonize with the furnishing. There are many housekeepers who would at this time decorate the boys' room or the girls' room, if the suggestion was made.

Is it not an excellent time now for the decorators to introduce some of the latest types of decoration, having more time at their disposal than in the spring?

Is it not worth a determined effort to create this demand through the medium of attractive window displays, neat announcements and suggestions which can be supplemented by some business calls at the homes of possible prospects?

SOURCES OF ARSENIC.

Among the most important sources of arsenic may be mentioned the following. The silver mines of Saxony, Germany, those of tin and pyrites of England, arsenico-pyrites or mispickel of Spain, and auriferous mispickel in the Province of Ontario, Canada. The United States is said to consume more than one-half of the world's production of metallic arsenic, white arsenic (arsenious acid), orpiment, and red sulphide of arsenic. Spain in 1905 exported 1,750 tons of white arsenic to the United States and 246 tons to France. Germany produces the largest quantity of metallic arsenic and arsenious acid. England has fallen far behind, although it held the first place in 1902. In France there are three mispickel mines: Two in the Department of the Aude and one in that of the Puy-de-Dome. The production of these three mines in 1905 amounted to 3,117 tons.

Wise is the man who knows what not to say, and remembers not to say it.

"VERONICA"

COVERS WELL

The **VERONICA** is a soft rich green, of great covering power. It is very durable, and manufactured especially for Window Blinds, Shutters, Verandahs, Screen Doors, Engines, Agricultural Implements and all kinds of Wood and Metal Work. See that each package bears the name of **The Canada Paint Company, Limited.**

* * *

VERONICA IS A TRADE MARK

The **VERONICA** Blind and Shutter Green is made only by **The Canada Paint Company, Limited,** of Montreal, Toronto and Winnipeg. The word **VERONICA** is copyrighted as a Trade Mark with the Department at Ottawa, Canada.

* * *

VERONICA IS IN FOUR SHADES

The **VERONICA** Green is made in four shades, viz.:—Light, Middle, Deep and Extra Deep. Insist upon the **VERONICA**, as the undoubted superiority of this Green has led to imitations.

For Sale by All Hardware and Paint Dealers Who Desire to Increase Their Business.

THE CANADA PAINT COMPANY LT'D

Any Paint Will Advertise You

Because everybody will look at it. But HOW will it advertise you? What are you selling? Does it bring you a good name or a bad one? You ought to know—don't trifle with it. Any paint trade in Canada to-day—your paint trade—can be increased by selling paints with a reputation.

RAMSAY'S PAINTS

will advertise you well, will give you a name—a distinctive name in the paint trade. They will bring you trade and profits. Let us show you the new Ramsay Paint cards and the ideas for advertising. They will help you.

Have you seen Ramsay's 1908 catalogue? Everybody should have one. It covers a great many money making lines.

A. RAMSAY & SON CO.
MONTREAL
Est'd 1842 **Paint Makers**

NEW ERA PAINT

leads in quality. It spreads far and evenly. It keeps its fresh appearance a long time. That's because New Era Paint is pure. You need no argument to sell New Era Paint. Every can of it is evidence of its high quality.

ALABASTINE

is the only Wall Coating which is extensively and persistently advertised to the general public and is what the people call for when they want anything in the line.

No persuasive argument is required from the dealer to sell it. People know its merits and ask for it because it is *ALABASTINE THEY WANT.*

A well-selected stock of *ALABASTINE* is "as good as the wheat," for repeat sales are invariably the rule once the customer uses it.

Our publicity campaign for 1908 is sure to more than double the already large trade for *ALABASTINE.*

Our illustrated Catalogue, *"HOMES, HEALTHFUL AND BEAUTIFUL,"* handsome Counter Show Cards, Cloth Banners, Tint Cards and other literature, which we supply liberally with every shipment of *ALABASTINE* help the dealer to create new trade.

The new two-sheet Poster showing an enlargement of the illustration of the Dining Room in *"HOMES, HEALTHFUL AND BEAUTIFUL,"* which we propose posting in large numbers on all the Bill Boards in Canada during the Housecleaning Season will be a *"SURE WINNER."*

To any dealer who will promise to display and distribute this advertising matter, we will be pleased to send a complete outfit, free of charge, express prepaid, on receipt of request for same.

Get ready to supply the large and growing demand of *ALABASTINE* by ordering a full assortment either direct or through your nearest Jobber and *DO IT NOW.*

CURRENT MARKET QUOTATIONS.

February 28, 1908

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

Mistakes and Neglected Opportunities

MATERIALLY REDUCE THE PROFITS OF EVERY BUSINESS

Mistakes are sometimes excusable but there is no reason why you should not handle Paterson's Wire Edged Ready Roofing, Building Papers and Roofing Felts. A consumer who has once used Paterson's "Red Star" "Anchor" and "O.K." Brands won't take any other kind without a lot of coaxing, and that means loss of time and popularity to you.

"Seeing is Believing"

¶ As the Ross Sporting Rifle represents the best in modern rifle manufacture, the highest grade materials and minute accuracy in workmanship, it is to your interest to learn fully about this Canadian Rifle—

¶ The Ross Straight Pull 303 Sporting Model M is one of our leaders to retail at $26. The barrel is the celebrated Ross high pressure, non-fouling, gun-barrel steel — The breech action is dependable.

Our representatives are now demonstrating the merits of this rifle—It places you under no obligation to drop us a line to make sure you will be on their calling list.

Our advertising policy is co-operative.

ADVERTISEMENTS WE LIKE TO LOSE

Most firms dislike losing business. It usually means the customer is dissatisfied and that is a serious matter. We have just received a letter, however, which is an

EXCEPTION TO THE RULE

R. H. Tetlock, of Unionville, Ont., sent us the following advertisement :

> FIRST-CLASS set of tinners' tools complete with benches, cheap if sold at once. For particulars write Box 54, Unionville.

He instructed us to insert it four times. After three insertions he wrote us as follows, under date of Feb. 4, 1908 :

> "Please discontinue my ad., 'Tinsmiths' Tools for Sale,' as I have sold satisfactorily, through the assistance of your valuable paper."

The advertisement cost 80 cents for the three insertions.

Surely it was a good investment.

Something You Ought to Be Selling

New Century Style "B"

The New Century method of washing has succeeded, not because of its ease, speed and simplicity only, but because it gives better results than are possible with any other method.

This machine has a wringer stand too, not a rickety affair, but a convenient, strong, rigid attachment, always in position, never in the way.

The experience is in the machine. You'll hear no complaints of it and have no excuses to make.

They are the best there is.

Dealers, don't load up with experiments, it is a losing game

PARIS GREEN

For the next few weeks watch this page weekly for pointers in Spring Buying.

Among Painters in England, the name of "BLUNDELL SPENCE & COMPANY" LIMITED, is better known than that of any paint or varnish manufacturer in the United Kingdom. They have not been making "PARIS GREEN" as long as some other houses, but the quality of their goods is equal, if not better, than anything sold on this continent.

We give you below an analysis of a package just received. This will give you a better idea of the quality than anything we can say.

Lab'y No. 16058. Sample of PARIS GREEN, marked "Blundell Spence & Co., Limited, Hull and London.

LEWIS BROS., LIMITED, MONTREAL.

The sample of Paris Green received from you, marked as above, has been carefully analyzed with the following results:

Residue Insoluble in Ammonia 0.75%
Copper Oxide.....31.40%

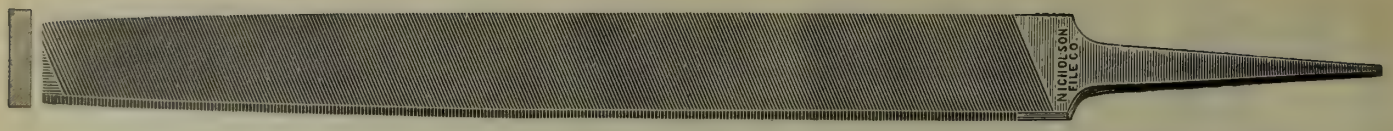
The amount of residue is very small, and is not more than is found in the best of Commercial Paris Green.

The percentage of Copper Oxide is that which is found in pure Paris Green of normal constitution.

In our opinion this sample is undoubtedly pure Paris Green of first-class quality.

Yours truly,
MILTON L. HERSEY,
MONTREAL.
City and Provincial Analyst.

We would like to place a sample order with you and satisfy yourself that the quality is right. We will not charge you any more for it than other makes and if your order is large enough, possibly a little less.



If you have not bought your full requirements it will pay you to correspond with us.

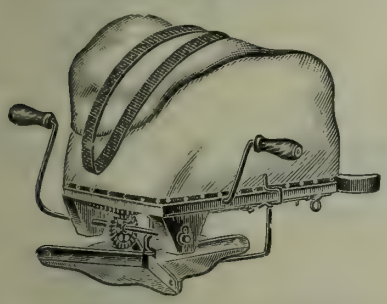
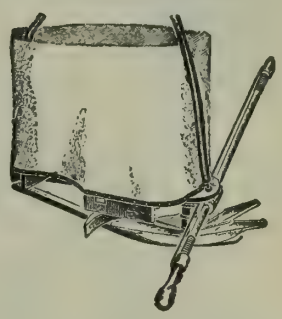
Is quickly and easily cleaned.

Kent Corn Planter, "Triumph."



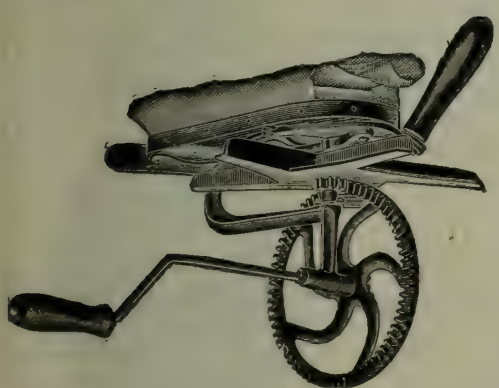
With and without pumpkin seed attachment.

Farm Bells



Weight, 40 to 100 pounds.

Seed Sowers

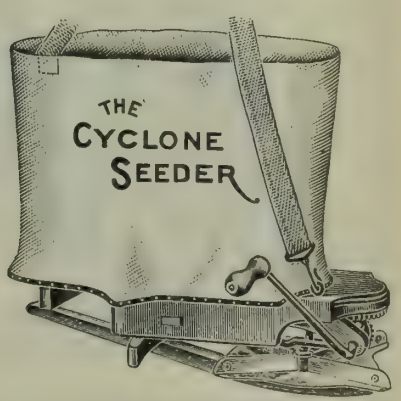


The "Little Wonder" Seed Sower.

It is constructed on a single bottom, and although a low priced machine, embodies all features required in a seed sower for distributing seed perfectly even. The novel seed agitating device insures a uniform flow of seed and in any desired quantity. .

The "Champion Jr." Seed Sower.

Anyone seeking a low priced seeder will find conveniences and quality in the "Champion Jr.," found in no other machine of the kind.



The "Premier" Broadcast Seed Sower.

The "Premier" will sow any seed that is sown broadcast, such as oats, wheat, rye, rice, flax, millet, clover, timothy, grass seeds, etc.

Under ordinary conditions these machines will sow at a round about as follows: Wheat, 50 ft.; rye, 50 ft.; clover, flax, millet, 40 ft.; grass seed, 24 to 36 ft. Full directions are sent with each machine.

The "Cyclone" Seed Sower.

Will sow timothy, clover, wheat, oats, rye, buckwheat, bone dust, turnip, millet, corn, cotton and all grain and grass seeds. It distributes evenly and works perfectly. The operator can regulate it to sow from forty to sixty acres per day.

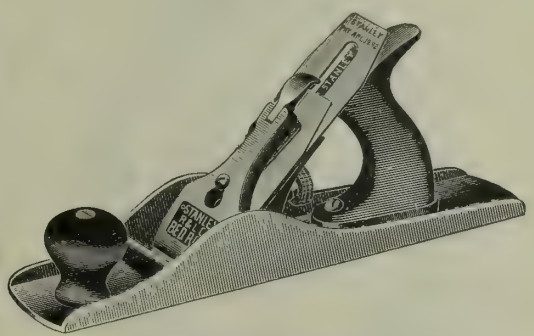
Tools it Pays to Sell

No. 37.—Stanley Metallic Level and Plumb. "V" bottom for use on shafting. In three sizes, 12, 18 and 24 in.



No. 9½.—Block Plane. The line of Stanley and Bailey block planes includes planes for every purpose and of every usable size.

No. 49.—Stanley Adjustable Auger Bit Gauge. Can be quickly attached to or removed from the bit. Its use will not bend the bits.

No. 921.—Stanley Concealed Rachet Braces. The most perfect braces on the market. Made in five sweeps, 6, 8, 10, 12 and 14 in.

Stanley "Bed Rock" Planes are the highest perfection in plane construction. They are made in all desirable sizes of smooth, jack, fore and jointer planes, plain or corrugated bottoms.

All the above tools are Stanley Tools. A new catalogue has just been issued, showing the complete line. We will send you one if you so desire.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines These enquiries come from Wholesalers, Manufacturers and Retail Dealers, who usually intimate they have looked through Hardware and Metal, but cannot find any firm advertising the line in question. In the majority of cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay them to advertise in larger space.

TWIST DRILL ECONOMY

is not in buying the cheapest Twist Drill on the market, but in buying the Twist Drill that will give the ***longest and most satisfactory service for the money invested.***

"DIAMOND" Twist Drills will do that because in their manufacture every care is taken to produce Drills of great wearing quality.

The material entering into their construction is specially selected for Twist Drill manufacture and the hardening and tempering is carefully and properly done.

Every precaution is taken in Milling, Grinding and Clearance to insure absolute accuracy, and "Diamond" Twist Drills must pass many rigid inspections before leaving the factory.

WE GUARANTEE THEM TO GIVE SATISFACTION.

OUR CAPACITY DOUBLED!

Our new building, 500 feet deep, has doubled our capacity.

Additional machinery—the finest mechanical construction has not only increased but improved our output.

Sportsmen and Riflemen throughout Canada have declared for Dominion Ammunition.

Results are more satisfactory—there is a greater effectiveness, and a more absolute certainty in using

DOMINION AMMUNITION

THAN in using any other.

It is cheaper too—price for price imported Cartridges do not compare with Crown, Imperial or Sovereign shells—and in metallics the difference is even more in our favor. The saving of a large duty is a very important factor, and it is not only the customer who gets the benefit.

Why not standardize your stock and sell only "Dominion Ammuniton?"

We can sell you a load to fit every modern fire-arm, rifle pistol or shot-gun. Our goods give best possible satisfaction. Why then lock up hundreds of dollars in sundry lines of doubtful saleability?

Our sales-manager will gladly explain—write us.

Retail Hardware Association News

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding Association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

NEW EXECUTIVE OFFICER.

R. C. Chown, the youngest member of this year's executive of the Ontario association, whose likeness on this page will be recognized by many readers of the paper, is vice-president and sales manager of the W. W. Chown Co., Limited, Belleville, Ont. He was born in Kingston, Oct. 17th 1878, and moved to Belleville with his parents in 1882, and after attending the public and high schools began his business career in 1896, by taking a position with S. C. Chown, staying with him until the next year when the W. W. Chown & Co., wholesale tinware and lantern manufacturers opened a retail hardware store. He then joined their staff of salesmen. In 1901 this business was amalgamated with S. C. Chown's and formed into a stock company under the above name, he becoming a member of the new firm. In 1905, he went on the road and represented his house until the fall of 1906, when he was called home to manage the business along with his brother, W. A. A. Chown, secretary-treasurer of the company, as W. W. Chown, head of the firm was leaving for Edmonton, Alta., to open up another business. The Belleville business, under their management, has been very successful and the prospects are reported bright for a good summer's trade.

LAWYER'S LETTERS.

W. B. Laidlaw, 87½ King St. east Toronto, the lawyer who has arranged to supplement the association collection letters with a strong legal letter, reports that several members have already taken advantage of his services. It will be remembered that members of the Ontario association who have paid $1 for 60 of collection letters No. 1 and 40 of No. 2, can have the lawyer's letter sent to delinquents for a fee of 25 cents per letter, paid direct to Mr. Laidlaw.

The lawyer assumes that the delinquent has received and ignored association letters No. 1 and No. 2 and notifies him that the matter has been placed in the solicitor's hands for immediate action, suggesting that a call be made or letter sent at once to the merchant to whom the account is due. Where the delinquent has removed to another province, of course, a special letter must be sent.

The members who have reported regarding the results secured from the collection letters show that the letters bring in about thirty to forty per cent. of the total accounts rendered, this percentage having been reached in some cases out of accounts merchants had given up as impossible of collection. As good results can hardly be expected from the lawyer's letter, but it ought to be worth 25 cents to make a final effort to collect an account before taking it to court or striking it off the books as uncollectable.

WHAT ANIMAL IS IT?

"The last two issues of Hardware and Metal were rattling good numbers and very interesting to all in the hardware trade. It is surprising to know how many dealers read all about our association and how many benefit and profit by the work of the organization and yet they decline or neglect to contribute $3 in cold cash for membership. What sort of an animal is it that absorbs everything and gives out nothing? Human beings do not like to be compared with that animal." So writes one of the oldest and best known members of the Ontario association.

R. C. CHOWN, BELLEVILLE.

Elected a Member of the Executive of The Ontario Association at the Convention in Toronto in February.

BENEFIT TO EVERY DEALER.

"I am very sorry I was not able to attend the convention this year as I believe it is a benefit to every hardware dealer to be present," writes W. I. Wagg, Providence Bay, when sending a cheque for his membership for 1908.

INTERVIEW THE EDITORS.

Hardware merchants who haven't talked over the mail order and parcels post questions with their local editor should do so at once. The editor's interests are your interests, even though he may not realize it. Let all the farmers and retired farmers send their cash to the catalogue houses (while buying for credit at home) and the ability of the local merchant to spend money for advertising or job printing is crippled, the paper suffers and the tendency is to discourage local industry, stop the town's growth and decrease the value of both farm and town property.

The country editor, if he knows his own interests, will constantly urge loyalty to the home merchants and manufacturers and point out the ill-effects of such legislation as the parcels post C.O.D., which would make every country postmaster a selling agent for the big departmental stores in Toronto Montreal and Winnipeg.

Insert in Local Papers.

Ask your local editor to give space to the following bit of poetry. He'll print it if you ask him and show him how it will help him as well as you.

A farmer out in Kansas,
About five years ago,
Went into town one day to spend
Some of his hard earned "dough."
"And in a merry jest," and just
To show his printing skill,
He printed his initials on
A brand new d-o-l-l-a-r b-i-l-l.

He spent that dollar that same day
Down at the village store.
He thought 'twas gone for ever then,
And he'd see it no more.
But long before that year rolled by
One day he went to fill
A neighbor's order, and received
That same one d-o-l-l-a-r b-i-l-l.

Once more he spent that dollar bill
In his own neighborhood,
Where it would do himself and friends
The most amount of good.
Four times in two years it came back,
As some bad pennies will,
And each time he'd go out and spend
This marked one d-o-l-l-a-r b-i-l-l.

Had he been wise that dollar might
Be in his town to-day.
But just about two years ago
He sent it far away.
The people who received it then
I know have got it still,
For 'twas to a mail order house
He sent his d-o-l-l-a-r b-i-l-l.

No more will that marked dollar come
Into the farmer's hands,
And nevermore will it help pay
The taxes on his land.
He put it where it never can
Its work in life fulfill.
He brought about the living death
Of that one d-o-l-l-a-r b-i-l-l.

Window and Interior Display

CANADIAN WINS FIRST PRIZE.

A window display recently made by S. S. Wetmore, with A. M. Bell & Co., Halifax, N.S., is shown on this page, it having been considered the best of many special displays in a large competition. An idea of the time necessary to carry out the design may be had from the fact that all the work was carried out with goods manufactured by the Pike Manufacturing Co., Pike, N.H. and a few cheap mechanical effects purchased by the designer.

From such articles as whet stones, oil stones, corundum stones, and emery stones, with the addition of a toy train, a little water and a toy boat, Mr. Wetmore constructed the display. In the north end of the window stands a well designed railway depot from which at regular intervals a train carrying stones from the quarry to the factory

Display of Pike Stones for Which First Prize was Awarded to S. S. Wetmore, Halifax.

on the opposite side of the window is seen to pass, crossing a bridge en route. The bridge is built of stone and is very realistic, with water flowing under it. The windmill in the rear also adds to a scene of bustle which was just as wonderful as the design itself.

The whole window was shown with a background of trees. The passing of the train, the hauling of the stones and the circuit of the wheel constituted a series of attractions which kept a group constantly at the window and undoubtedly resulted in increased sales of Pike goods by the firm.

The display was made in a competition conducted by the Pike Manufacturing Company, entries being made by a large number from all parts of Canada and the United States. The award of first prize to Mr. Wetmore in such a competition is, therefore, a marked tribute to his ability and in keeping with the reputation he has earned in purely Canadian competitions.

CONSTRUCTION OF SHOW WINDOW

That the proper construction of a show window has largely to do with the successful showing of the merchandise placed in it is not for a moment questioned, yet it is surprising that in the past, and even at the present time, the window space seems to receive small attention from the architects when a building is being planned, writes W. C. Ellis in Ad Sense. This is not the case in large cities so much as in the smaller towns. Progressive merchants are beginning to realize more fully each season the value of the show window, and hence more attention is given to its construction than formerly.

The windows of modern stores are marvels of ingenuity in their construction, as compared to the windows of even a few years ago. Large city stores are of the independent steel construction, and the fireproofing is carried out in the windows as well as in the rest of the building, so that all electric lighting has to be installed at the time the building is being constructed.

Size of Windows.

The size of a store window should depend on the distance between the main supporting columns of the building. The division between the different windows should come between the columns, or if the columns are back of the plate glass, the division should be directly in front of the columns, not to one side of them, as is so often the case. Usually the span between the columns is 16 to 18 feet and this would be the width of the window. For this width a depth of 7 to 8 feet is proper and the ceiling should be 10 feet high.

The floor of the window should be 18 inches above the sidewalk. This raises objects displayed on it sufficiently near to the eye, and yet is not so high that it looses the effect of a floor.

Each window should be equipped with one or more concealed electric wall or floor pockets, so that connections for extra lights in the windows can be made easily and quickly.

Preventing Freezing.

Now comes the problem of constructing the windows so that they will not sweat or freeze. The most modern way of overcoming this is to make them practically airtight. Construct them so that no moisture from the basement or elsewhere can get in. Then so arrange the steam heating system of the building that the feed pipes for the upper floors pass through the windows, directly behind the supporting columns, or incased in fireproofing around the columns. The heat from these pipes will dry out any moisture that might get into the windows while they are be-

ing trimmed, and consequently prevent them from freezing. The system of ventilating the windows at the bottom to keep the temperature inside the windows the same as that on the street was advocated for many years and is still in use in some localities.

There are many reasons, however, why this system is obsolete, the chief of which is the damage done to the merchandise by the smoke and dust which is blown in through the ventilators.

Another reason is that a window trimmer cannot work at his best when the temperature of a window is as frigid as it is out of doors. The ceilings should be paneled in the same kind of wood that is used for the background. A recess should be left in the ceiling at the front and a trough reflector containing the electric lights should be placed in it.

The all-glass front is fast gaining popularity. The ceiling of the window is supported from above and the floor is built the same as in any ordinary window, only no frame is used to hold the glass on the sides. It rests on the base and is held in place by the moulding at the top and is clamped to the return glass at right angles, with small brass clamps made for the purpose.

Where several plates are used in line narrow strips of very thick glass have been used in the place of angle irons to join them together. They are clamped to these strips in the same way as that in which they are clamped to the return glass at the entrance of the store.

Location of Entrance.

The question of where the entrance to the store should be is best determined by the location of the store in the block and the kind of merchandise carried. When the store is very narrow, and is not on a corner, it is invariably better to have one large window and the entrance at one side than to have two small ones. Where it is necessary to have a column in a window on account of the peculiar construction of the building it should be treated as inconspicuously as possible.

DO IT WITHOUT ARGUMENT.

Argument and bickering and worrying over small things is one of the greatest evils in the working world. Procrastination merely is petty larceny of time as compared with argument.

How many workers there are, who, when told to do something, stop to debate or bicker over the manner in which that thing is to be done. How many there are who want to argue the point from every possible angle. And how many there are who, having been curtly "shut up" and told to do it, waste still more time worrying and fretting.

These workers forget that the object is to get a thing done—and that the way it is done is secondary. If it is not done right, of course, there is trouble, but that is not the point. The arguments chiefly are as to differences in method in accomplishing the same end.

Only a few days ago I watched a heating contractor and steamfitter engaged in putting a steam pipe through an 18-inch wall, says John M. Masterson. The contractor explained briefly and concisely how he wanted it done. The steamfitter stopped, put down the pipe, and argued. He declared that he never had done that kind of work in that way, that he had worked for some of the best heating contractors in the country, and that they did not do it that way. He started to get technical and the boss shut him up curtly.

After hours that evening the two rode home together. The steamfitter had been pouting and sulking all afternoon on account of the reprimand. This time he found the boss ready to argue, and they engaged in a long and technical debate. Finally the heating contractor remarked:

"Jack, this is your worst fault. You don't know how to obey orders. In the first place, when I tell you to do something you are likely to start without knowing exactly what I want. Never do that. Always find out, before attempting any work, exactly what is wanted.

"You don't know how to take orders. This is my job, and I am responsible. I tell you to do something. When I do that it is up to you to do that work and do it my way. It may not be as good as your way, but that is the way I want it, and, as I assume all responsibility, that is the way I'm going to have it.

"You knew just as well as I this morning how I wanted that pipe connection made. Instead of making it that way, you wanted to try it some other man's way. You wasted over five minutes of my time and your own, arguing about it.

"You'll never be a first-class steamfitter until you learn to do things the way the man you are working for wants them done and orders them done."

That was plain talk—but it settled Jack. He admitted frankly that he never had looked upon it that way.

That same day I watched two painters at work on a house. They were just starting. They set out barrels, brushes, buckets and ladders, and then spent 20 minutes debating whether to start with the roof or on the east side. The boss had just driven away after telling them to start on the roof. It was nearly an hour before they finally decided that he was right—and meantime they had soaked the house owner nearly $1 in time—or the boss, if they were working by the job.

I see this tendency to bicker and waste time in small things in every line. I have a friend, a capable, even a brilliant man, who wastes hours every day fretting himself over small quarrels fancied slights, neighborhood rows, etc. Instead of simply passing them over as not worth while he is keeping himself from doing something really big in the world by letting the small things occupy his mind and his time. Just at present he is wasting an hour or two a day telling people about a grievance he has, and planning revenge. The grievance is against a firm that he employed to clean some oriental rugs and which almost ruined one of the rugs in the cleaning.

The rug, to my certain knowledge, cost $85, and this man, since the accident, certainly has wasted at least $100 worth of valuable time kicking about it.

The wise man is he who knows whether or not a thing is worth while arguing about, or "raising a row over." He certainly cannot afford to waste either his own or his employer's time in petty bickerings.

DECIDED TO STAY SINGLE.

A muscular Irishman strolled into the Civil Service examination-room, where candidates for the police force are put to a physical test.

"Strip," ordered the police surgeon.

"What's that?" demanded the uninitiated.

"Get your clothes off, and be quick about it," said the doctor.

The Irishman disrobed, and permitted the doctor to measure his chest and legs and to pound his back.

"Hop over this bar," ordered the doctor.

The man did his best, landing on his back.

"Now double up your knees and touch the floor with your hands."

He sprawled, face downward, on the floor. He was indignant, but silent.

"Jump under that cold shower," ordered the doctor.

"Sure, that's funny!" muttered the applicant.

"Now run around the room ten times to test your heart and wind," directed the doctor.

The candidate rebelled. "I'll not. I'll sthay single."

"Single?" asked the doctor, surprised.

"Sure," said the Irishman, "what's all this fussing got to do with a marriage license?"

He had strayed into the wrong bureau.

LONDON, ENG., METAL MARKETS.

London, March 3.—Cleveland warrants are quoted at 50s 10½d, making prices as compared with last week 3½d higher.

Spot tin opened steady at £128 10s, futures at £127 12s 6d, and after sales of 300 tons of spot and 500 tons of futures, closed steady at £128 10s for spot and £127 10s for futures, making price as compared with last week £1 10s lower on spot and £1 15s lower on futures.

Spot copper opened weak at £57, futures at £57 10s, and after sales of 200 tons of spot and 900 tons of futures, closed weak at £56 15s for spot and £57 5s for futures, making price as compared with last week £1 7s 6d lower on spot and futures.

The lead market closed at £13 12s 6d, making prices as compared with last week 5s lower.

The spelter market closed at £21, making price as compared with last week 7s 6d lower.

The wild waves are like some people; they make a lot of noise and say nothing.

Thomas O'Connell, plumbing and heating contractor, Montreal, has been re-elected without opposition alderman of St. Ann's Ward, Montreal City Council.

PUBLISHED EVERY SATURDAY.

FOR THE RAILWAY COMMISSION.

With the proposal for the reorganization and addition of members to the Board of Railway Commissioners, several suggestions have been made regarding the appointment of new commissioners. Hardware and Metal has pleasure in submitting the name of Mr. Hugh Blain, of the Eby, Blain Co., Toronto, for consideration, and in drawing attention to the qualifications which would seem to merit his appointment.

When the board was formed some years ago, at the instigation of Hon. Mr. Blair, it was his idea that its personnel should include a lawyer, a railway man, and a business man, a seemingly ideal combination. The board, up to the present time, has been composed of a lawyer, an agriculturist and an educationist, and while there is no hesitancy in expressing praise for the excellent work it has done, it has been felt in some quarters that its work might be even more beneficial if thoroughly practical men were included in the personnel of its membership.

There is probably no other man in Ontario who has been for years so closely in touch with business matters in relation to the railways as Mr. Hugh Blain. During his presidency of the Toronto Board of Trade he secured material advantages for the city from the railways and for some years he has been considered the board's authority on freight and general railway matters. It was chiefly through Mr. Blain's influence that equalized freight rates were secured some years ago. His intimate knowledge of the situation also has been of material benefit in other matters of similar import. Mr. Blain possesses the practical knowledge of the business man in common with expert information and experience in many departments of railway business. He is, too, in personality and temperament, the type of man looked for to fill such an important position. It would seem that a mistake would be made if Mr. Blain were passed over when the vacant seat on the commission is being filled.

SIGN ADVERTISING.

One of the most simple and cheapest forms of advertising and yet one which is in a great many cases lamentably neglected, is that of the sign. In the cities this is usually well taken advantage of, and the astonishing growth in the number of illuminated signs advertising all lines of business during the last year or so attests the value of this medium. But in the country districts many a good opportunity is wasted and many a dollar lost through neglect of this form of commercial publicity.

How often you see a factory adjacent to a railway where a sign would be a very valuable adjunct, but the firm appears nameless and travelers cannot even gather a hint as to the variety of goods manufactured. How different this is from other firms who rent sections of farmers' fields and side of their barns and miles of fences to display their product.

In the smaller towns store after store is signless and to a stranger the only way to find out what class of goods is handled is to step inside and inquire.

But the sign should be fresh-looking and attractive. An old worn-out sign over a really attractive store is worse than none at all.

CANADIAN PIG IRON PRODUCTION.

The statistics of the production of pig iron in Canada in 1907, as shown by figures supplied by the producing companies, show that the total was 581,146 tons, against 541,957 tons in 1906, an increase of 39,189 tons, or over 7 per cent. In the first half of 1907 the production amounted to 270,100 tons and in the second half to 311,046 tons, an increase of 40,946 tons. Of the total 572,025 tons was made with coke, 8,971 tons with charcoal, and 150 tons with electricity. The production of pig iron in Canada in the last 14 years is given below:

Years	Gross tons
1894	44,791
1895	37,829
1896	60,030
1897	53,796
1898	68,755
Years	**Gross tons**
1899	94,077
1900	86,090
1901	244,976
1902	319,557
1903	265,418
Years	**Gross tons**
1904	270,942
1905	468,003
1906	541,957
1907	581,146

The production of basic pig iron was 341,257 tons, against 246,228 tons in 1906, and of Bessemer pig iron 154,910 tons, against 165,609 tons in 1906. Basic pig iron was made in 1907 by four companies owning nine furnaces and Bessemer pig iron by two companies owning three furnaces. The basic and Bessemer pig iron was all made with coke. Canada has not made spiegeleisen or ferromanganese since 1899. On December 31, 1907, Canada had 16 completed furnaces, of which 14 were in blast and 2 were idle. Of the total 13 usually use coke for fuel and 3 use charcoal. In addition 3 coke furnaces upon which work was suspended some time ago, were partly erected on December 31.

COACHING THE STAFF.

The wholesalers and manufacturers throughout the country are learning that the salesmen's convention is an important force in selling goods. By getting the salesmen together periodically and threshing over selling points and every other point affecting the business with them the efficiency of the force is greatly increased and the business grows as a result.

There is no reason why this plan cannot be worked in every retail store. The progressive merchant, anxious to bring his store staff to its highest selling efficiency, will find that by getting them together for talks about goods and store problems better results are sure to come.

It is easy for members of the staff of any business institution to get sore and discontented, to think that their prices are the highest, that their house is the least accommodating, and that there would be a better opportunity with some other house.

That they get into this state of mind is the fault of the proprietor. He should talk all of those points over with them, and the best place for it is the staff meeting held weekly or twice a month, as may be thought best.

THE SITUATION IN THE WEST

The Western Viewpoint by our Winnipeg Correspondent.

The business situation in the west presents many features of interest this week. Spring is stirring, even though the ground still has its covering, albeit a thin one, of snow and ice. Some immigrants have already arrived, other arrivals are booked, farmers are filing inquiries for farm help, the collection and distribution of the seed grain is being pushed with the utmost vigor. Seed Commissioner Clarke, of Ottawa, having arrived to lend his assistance. There seems to be a feeling in the very air that spring will come early this year and everyone is preparing to take advantage of the very first break. Heavy immigration is expected, and the demand for farm help is exceptionally good, evidently the farmers are preparing to make the most of seed time this year and have everything in early.

* * *

With the closing of the market tomorrow will end the first week of the Grain Exchange under the new conditions. The act amending the charter was not formally assented to until Tuesday, but the Exchange took time by the forelock and passed a resolution on Saturday, the 22nd, doing away with the trading hours and establishing a purely curb market. This was done in order to prevent themselves from being penalized under the act, which required that all quotations should be posted, at least every half hour, in full view of the public, for whom a gallery should be provided. It is out of the question to provide a gallery in the present building. Another matter that has been provided for is the cutting out of the American quotations. These have cost the Exchange over $500 a month, and they do not propose to furnish them for the benefit of the general public. The market service as it was constituted before the passage of this act cost the Exchange over $10,000 yearly. By the passage of this act, if they continued to procure the service they would be spending $10,000 for the benefit of any Tom, Dick or Harry who may happen along.

The act provides for an unlimited membership, and in this way the whole value of the seats has been done away with. The act says they shall not be sold for more than $2,500, but at the present time one could not sell one for $500, in fact, could hardly give it away. It is a positive disadvantage to the trader, at the present time, to be a member of the Exchange, for it subjects him to restrictions and disabilities that otherwise he would not have. Curb trades are still being cleared through the clearing house that institution being a joint stock company, and some understanding having been arrived at. All members of Exchange have been counselled not to say anything for publication, but there are meetings from time to time and the council of the Exchange and the lawyers are evidently hard at work trying to find a way out of the tangle. In the meantime, though the actual local market has not been seriously affected, there is a spirit of unrest and distrust that is not helpful to business. The place where the trouble has been felt the most is in business from the south, which has dropped almost to zero point during the week. Houses that formerly handled 1,000,000 bushels a week in trades for southern customers, are not doing a thing, but are constantly pestered with inquiries as to whether all open trade had not better be closed out? What the value of the seats may be? and a dozen other things, showing that there is a lack of confidence in the outcome that is spreading as the days go by.

The fact that it has been possible to hustle this legislation through and the further fact that the Grain Growers' Associations are clamoring for Government-owned interior elevators is already diverting capital from the country. An Old Country house that had all plans drawn and preparations made for the erection of fifty elevators in the west this coming season, have summoned their representative home and he made no secret before he left that he would advise his house to have nothing to do with the matter until they had some assurance that haveing built the elevators they would not be confiscated or expropriated or in some way wrested from them by the Government and the Grain Growers. The erection of fifty elevators of even 30,000 bushels, the minimum capacity, would represent an investment of $300,000 for buildings alone. The company who last year began the work of erecting elevators along the line of the Grand Trunk Pacific are also resting from their labors, and it is more than probable they will not build any more houses this year.

A matter that is of special interest to the manufacturers of the east, is the announcement by F. W. Peters, of the C.P.R., that Calgary and Edmonton are to be put on an equality with Winnipeg in the matter of freights from the eat. This will certainly stimulate both these towns as wholesale distributing centres, and indirectly benefit the manufacturer, as it will tend to a great consumption of eastern goods. The reduction amounts to 5c per 100 pounds on 5th class matter, the class under which most of the western goods are shipped, and 8c per 100 pounds on implements. It had been intended to have this change come into effect on March 1st, but it was not possible to get the proper notifications out, and now it will come in force on March 15th, in time for a great deal of the western freight for spring trade, though, on the whole, a little late for agricultural implements, should the season be an early one. The new rate does not apply to the smaller towns, only to Calgary and Edmonton, and this, in itself, will emphasize them as distributing centres.

* * *

The announcement in the daily papers of Feb. 28th that the Bank of Montreal had agreed to carry the account of the city of Winnipeg, and to place $7,500,000 of Winnipeg securities on the London market, has been received with the utmost satisfaction by the great majority of the thinking citizens. The bank undertakes to place on the London market £1,500,000 of inscribed stock, which will enable the city to clear up completely all outstanding current liabilities, cover such new work as the paving of Main street and Higgins avenue, the great artery of the city running out to all the country east of Red river, and where all the big mills and most of the big lumber yards are situated and will further permit of the city putting $1,000,000 back into the sinking fund. The bank has also agreed to give the city an overdraft of $2,000,000 if necessary, on security of the current year's revenue. The securities will be placed on the market by the bank as soon as they are issued, which will be early in March.

It is felt by citizens generally that this is just the right thing and that it is eminently fitting that the city should be financed by Canada's wealthiest banking institution. The security is absolutely good and what more convincing to outsiders than that our own Canadian banks are willing to handle it. Mayor Ashdown laid the plans and put the machinery in motion towards securing this offer and the detail was worked out by Controller Evans and Alderman Riley, who went east to confer with the head offices of the bank and have just returned to the city.

* * *

A matter that is causing loud murmurs of discontent in the city, is the action of the Provincial Government in advancing the price of telephones to the doctors and nurses of the city. The increase is 25 per cent., whereas while the Government were stumping the country before the last election they were going to give much cheaper phones. When they bought out the Bell telephones at such an enormous figure it was thought that chances of reduction were slim, but even then no advance was anticipated. People are asking themselves, "If doctors and nurses, who will be next?"

* * *

While what was said about collections last week holds good a concrete example of how paper is being met may give a better idea of actual conditions. A representative of one of the large wholesale hardware houses stated the other day that on February first they had sent out $100,000 short date paper, the longest date being ten days, and that rather better than 65 per cent. of it had been paid. This is certainly a pretty good showing in what is supposed to be a hard year.—H.

STUDY YOUR TRADE PAPER.

Plenty of merchants are trying to work out a successful business single-handed. They are conducting their business enterprises according to pre-conceived ideas, along well-beaten lines, forgetting that improved methods are continually being devised and adopted by progressive merchants, with the result that trade is coming to them easier, and they are finding that business is becoming more and more of a pleasure.

Undoubtedly the most important factor contributing to this is the influence of the trade newspaper. In it the newest and most effective trade-bringing methods are described, with the results following their adoption, and the merchant who does not spend a specified time periodically reading his trade paper is losing an opportunity of acquainting himself with the most modern thought of the leaders in his line, and should not be surprised if he finds that his competitors are outstripping him in the race for success. The merchants who are the most successful look upon the time given to a study of their trade paper as time well spent.

HARDWARE TRADE GOSSIP

Quebec.

V. E. Hunt, of Tweed, Ontario, has been visiting hardware circles in Montreal.

J. A. Farewell's Carriage Works, Sherbrooke, Que., were damaged by fire last week to the extent of about $4,000.

E. F. Walter & Co., Montreal, have sent a cheque for $25 to the Montreal Firemen's Benevolent and Pension Society in appreciation of services rendered at the recent fire at their premises.

The Starke-Seybold hockey team played the return match with Lachute Club, Que., at Montreal, and after the game both teams were entertained to dinner by the directors of Starke-Seybold. The function was an appropriate closing to a successful season, Starke-Seybold winning seven out of ten matches played.

Lawrence Smyth, a veteran commercial traveler, and a former vice-president of the Travelers' Association, is dead after an illness of short duration. Mr. Smyth was engaged in the clothing and shoe lines, and at one time in partnership with his cousin, the late J. E. Mullin, conducted the business of Mullarkey & Company.

Ontario.

The assets of Thompson & Twock, plumbers, Ottawa, were sold by tender this week.

George A. Sills, Seaforth, was a caller at the Toronto office of Hardware and Metal last Saturday.

Robert Mainer, stove dealer and plumber, Orillia, has failed, and not Robert Waiver, as was reported last week.

Austin A. Briggs, advertisement manager of the McClary Manufacturing Company, London, was a visitor in Toronto during the week.

John McRae and J. J. Culleton, Fort William, have joined forces to open a plumbing and steamfitting establishment at Fort William.

C. P. Fabien, manufacturer of refrigerators, Montreal, has opened a sample room in Toronto, under the management of L. N. Stewart, who was formerly connected with the Guelph Stove & Range Company, Guelph, Ont.

Henry Clucas, sales manager of the Toronto branch of the Canada Paint Co., has returned from a two weeks' business trip at New Orleans and Chicago. Mr. Clucas thinks the paint business in the States will not suffer this year as a result of the panic.

An overheated shaft caused a fire at the James Smart Company's Foundry Brockville on March 4. The only damage to the machinery was from water, but the building was severely gutted. The loss, covered by insurance, is in the neighborhood of $5,000.

The George Taylor Hardware Company have had their entire hardware stock removed from Larder Lake to McDougall's Chute, where they have established a branch store. The above company now have stores at New Liskeard, Cobalt and McDougall's Chute. C. Palmer is the manager of the new branch.

H. G. Wookey, recently with Rice, Lewis & Son, Toronto, is on a trip to the Pacific coast, representing R. U. Delpentha, New York, dealer in French, Spanish and Italian grocers' delicacies, for whom he is now Canadian representative. Mr. Wookey is a brother of L. J. Wookey, one of H. S. Howland, Sons & Co.'s Toronto travelers, who will be remembered as one of the entertainers at the recent Retail Hardware Association banquet.

Maritime Provinces.

Leo Mitchener, who has been engaged with McGregor & Co., hardware merchants, Halifax, for some time, has severed his connection with that firm to accept a position in the west.

Western Canada.

W. R. Burke, hardware merchant, Gainsboro, Sask., has moved into new and up-to-date premises.

A NEW HOSE COUPLER.

The Time Saving Coupler Company, 166 Bay street, Toronto, who have recently obtained the Canadian rights for manufacturing hose couplers of a new and up-to-date variety, are about to place their goods on the Canadian market. The new couplers manufactured by this firm are different in many respects from those in use at present, and contain features which are guaranteed to do away with leaky couplings at the tap, the nozzle and at the junction of the lengths. The design is simple and of various varieties.

The tap adjuster is made to screw on any standard tap and left permanently in position, although, of course, it may be removed with the aid of a wrench. To this the coupler fitted to the hose is placed, it being the work of only a second to make a satisfactory connection which prevents leakage, and as the couplers are made with a recessed seat for washers the inconvenience caused by the loss of this important article is removed.

In making the connection all that is necessary is to insert the coupler into the tap adjuster and press over a latch or lever, which brings a section of the coupler into direct connection with the washer and thus prevents all possibility of leakage. To remove the hose, turn back the lever and pull the hose from the tap.

For three years these goods have been used with success in the United States, and in Canada they will be handled through the jobbers, but in order to make sure of a supply for spring needs it may be advisable for merchants to write the factory for information, in case the travelers are not supplied at this early date.

W. F. Musgrave, Toronto, is the manager of the firm. He has had a good business experience, having been connected with a mercantile house for five years, and during the past year has been with a firm handling imported goods.

There is a good margin of profit for merchants handling these goods and yet they will be sold for practically the same sum as the old styles.

Hardware Letter Box

Any questions on trade subjects will be answered by the editor in this department. Do you want any address, any special line of goods, anything relating to the hardware trade? Ask us. Letters from manufacturers, jobbers, travelers, retailers or clerks are solicited. Suggestions for trade improvement or discussions on trade evils are invited.

Creosote for Roofing.

G. E. Foster, Newboro, Ont., writes let me know through your letter box where I can buy creosote for staining wood shingles.

Answer—The Paterson Manufacturing Co. and the Standard Chemical Co., Toronto, can supply your needs.—Editor.

Cooper's Tools.

C. C. Falconer & Co., hardware merchants, Winnipeg, write, Let us know through your columns the firm names of coopers' tool manufacturers.

Answer—James Warnock & Co., Galt; Campbell Bros., St. John, N.B.; Columbia Handle & Lumber Co., London; Whitman & Barnes Mfg. Co., St. Catharines; Cowan & Britton, Gananoque; Montreal Rolling Mills, Montreal; Canada Screw Co., Hamilton; Parmenter & Bullock, Gananoque; James Pender & Co., St. John, N.B. The above firms do not make all the different lines of coopers' tools, some only manufacturing one line.—Editor.

U.S. IRON AND STEEL TRADES.

Cleveland, O., March 5.—The Iron Trade Review says: Many encouraging signs of slow improvement in conditions can now be noted. For the first time since the collapse of business conditions last October, western implement manufacturers have begun to specify tonnages of steel bars. This development is viewed with much encouragement by producers. Specifications from this source which came in this week unsolicited are of such amount as to indicate that the material is intended for new manufacturing work and not for filling-in purposes.

Reports of large sales of pig iron have not been confirmed, and the market continues dull and without developments of special importance. Although the recently adopted schedule for deliveries in the central west is being generally mafntained, there has been a little shading in some cases, including a sale of malleable at Dayton, O. Southern quotations show some irregularity. In some cities it is easy to make purchases on a basis of $12.50 Birmingham, but elsewhere $13 seems to be the minimum. Reductions in costs have been effected at some southern plants by interests which show a disposition to make concessions.

Sheet manufacturers are now operating from 40 to 50 per cent. of their capacity, specifications having increased somewhat. An important contract soon to be awarded by the Government for harbor improvements at Buffalo, will call for 7,000 tons of sheet piling.

Following the recent advances in scrap, due to a large extent to speculation, prices are again sagging and the market is dull.

Evil-minded folk measure others by their own standard.

Markets and Correspondence

(For detailed prices see Current Market Quotations, page 66.)

MARKETS IN BRIEF.

Montreal.

Ingot Tin—Firm at 32½c to 33c.
Copper—Firmer.
Lead—Down to $4.25.
Pig Iron—Firm.
Spelter—Unchanged.
Cast Scrap Iron—Higher prices.
Linseed Oil—Cut of 1c per gallon.
Red Lead—Cut of 25c per 100 lbs.
Locks—Canadian makes reduced.

Toronto.

Tin—Advanced to 34c.
Copper—Stronger, but unchanged.
Lead—Quoted at 4c.
Turpentine—Firmer.
Red Lead—Decline of ½c.
Linseed Oil—Quoted at 60c.
Spades and Shovels—Open market.
Locks and Door Sets—Now 45 and 10 off list.

MONTREAL HARDWARE MARKETS

Montreal, March 6.—With the advance of the season, there is, on the whole, a gradual enlargement in the movement of all lines, particularly kitchen and household supplies, tools, lawn goods, hose, builders' hardware, metal polishes and tackle blocks. Retail merchants have been working off any surplus goods they might have had, so that the stock on their shelves is now low. This fact will soon commence to influence buying, and the next week or two should see the volume of trade increase to good proportions. Spring is not far off now, and the dealer who wants his goods in comfortable time for the opening of the season should not delay much longer, unless he wants his competitor to get ahead of him in showing spring lines.

On the whole, trade in the Province of Quebec is healthy, and is assuming average volume. The West, however, is not so good, although indications point to a fair demand existing all the way through. The market generally holds firm, and there are no more fluctuations in price than is usually noticed in values at any time. Canadian locks have been reduced this week, and the discount is now 45 and 10 per cent. This is the first reduction in these goods since the low price of copper, and is probably based on the lower cost of production rather than over supply, and to a desire to keep out American goods.

Builders' Hardware and Supplies—A brisker movement is noticed in builders' hardware and supplies. Construction work will soon be opening up in earnest and complete lines will be wanted. Builders' hardware is an important branch of the hardware trade, and the merchant who carries a well selected stock will find it a good source of profit. Window trimmings, lock sets, bolts, and butts, are in best demand. Canadian locks have been reduced this week, but otherwise prices are unchanged.

Railway Supplies—The break in the price of shovels has not apparently brought about the increase in the sale that was anticipated by the makers. There is a prospect of the latter getting into line together again, and in that case the cutting will be discontinued. Picks, hammers, and drill steel are moving fairly well, but it is yet too early to feel the full force of the trade. The prospects, however, are extremely hopeful.

Lumbermens' Supplies — Skidding tongs in addition to chains and cant hooks, are now moving well for immediate delivery. Despite the falling off in lumber operations the trade has been well up to average. Prices have been maintained, and but for the set back last year, the season would have been a record one.

Spring Goods—Wringers, washing machines, sad irons, as well as household supplies, are maintaining the vigor noticed last week. Lawn mowers, and garden tools are also in demand, but no swing has been imparted to them as yet.

Nails—Nails are moving in fair quantity, but the recent cut has not done much to increase business. We continue to quote $2.30.

Sporting Goods—There is a singular absence of life in sporting goods. Shot and cartridges are in request but other lines are practically stagnant. It looks as if orders in this department, when they do come, will arrive altogether and in that case some dealers will have to put up with an annoying delay.

Bolts and Nuts—These lines continue to move freely, and a good trade is anticipated. Prices are being maintained, and makers' stocks seem to be ample.

Screws—Screws are in fair demand. Orders for future delivery are assuming larger proportion, and prospects seem to be very good. Stocks are not so well assorted as they might be. Prices are unchanged.

TORONTO HARDWARE MARKETS.

Toronto, March 5.—March business has opened up in a satisfactory manner in all the different cities and towns and though the country roads are still blocked with snow in many districts a satisfactory amount of booked orders are coming to hand. Building prospects continue to brighten and there is every prospect of a large number of residences being built during the year, although the number of permits issued to this date are behind those of last year.

During the week several important changes have taken place on the markets which have greatly tended to increase booked orders.

Builders' Hardware and Supplies—This line is always in demand and dealers are booking large orders for the year's business. Quantities though still slightly below last year's booking, are of a better quality and during the past week an important reduction of a temporary nature has overtaken the market, and should tend to increase bookings. All varieties of Canadian locks, door sets, catches etc., are involved in the cut and discounts have dropped from 37½ and 10 to 45 and 10 per cent. off list.

Spades and Shovels—These lines during the week have changed several times. The spring price lists quoted discounts, then net price lists were issued and at present an open market exists. The differences which exist at present among the manufacturers cannot last, however, and a new list will likely see prices advanced again to near the former figures.

Rope and Binder Twine—Booking on these lines is about over and prices remain steady. The bookings are extensive this year and prices remain unchanged.

Iron Pipe—The metal base remains steady at present and quotations for the week are steady. The demand is on the increase at present owing to the proxmity of the building season. We continue to quote: One-inch black, $5.28; one-inch galvanized, $6.23.

Spring and Summer Goods—Garden hose, lawn mowers, garden tools, poultry netting, wire fencing, etc., is increasing in demand to some extent and the orders coming to hand during the week are much more substantial than for some time. Prices are unchanged.

Miners' Supplies—Advices received from mining centres point to a large amount of development on all sides this year. As a result of this the prospects for a large demand for supplies of all kinds is good.

Explosives are in demand at present and large orders for drills, picks, shovels, etc., are confidently expected in the near future. In addition to the orders being booked for future delivery a good business is under way for immediate needs.

Screws—The demand for screws is steady and slightly larger than last week. There are good stocks on the market at present and at this writing it seems improbable that a repetition of last year's scarcity would occur. We continue to quote 85 and 10 per cent. on flat and 80 per cent. on round styles.

Oakum—The demand is steady and prices remain firm at present. We

quote 100-lb. lots at $4.50 to $4.75.

Nails—Wire nails remain firm and orders are fairly large. The price is likely settled for the building season. We continue to quote $2.30 for 100-lb. kegs.

Bolts and Nuts—Business is reviving at present and prices remain unchanged.

Sporting Goods—These lines are dull at present but stocks for summer demand are being constantly added to. The past winter has been good in sporting goods circles and at present stocks are much lower than was anticipated at the new year. Sporting guns will be higher this year and other lines are quoted at about the same figures. Fishing tackle will soon be a decidedly active line.

MONTREAL METAL MARKETS.

Montreal, March 6.—The metal situation has not altered much from last week. The premium on spot tin has again re-appeared in New York, as we anticipated, and merchants are being taught a lesson which will probably make them more careful in the future. It would be well if users of metals generally, took a warning from the present tin situation in the States. Through not buying ahead with due regard to the needs of the country, and allowing stocks to become depleted, purchasers of tin across the border have been forced to buy from the English market, with the result that they are paying a heavy price for the metal. It may be all very well to have cargoes of tin on the way from the East, but Singapore is a long distance from New York, and if the vessels are not in port when the metal is wanted, then it must be had from somewhere, and London, in consequence, reaps the benefit.

In a somewhat similar position will users of metals find themselves if the extreme conservative buying of the present day be prolonged much longer. A strong industrial boom is bound to spring up sooner or later, if only as a result of the depression through which we have just gone, leaving out the effect of the natural development that is going on, imperceptibly perhaps, around us. There has been curtailment of production in all directions, and although stocks may appear to be heavy in particular metals, this heaviness is more apparent than real. Trade activity does not take long to consume surplus stocks, when output has been curtailed. Mines, furnaces and mills, cannot be set going at a moment's notice, and demand when it does overtake supply is not easily caught up again. There will come a day when purchasers will find themselves in the same position as the tin merchants of New York are at present. Metal will be wanted immediately, and there will be no metal and then buyers will be squeezed on a soaring market. Prices are now at a good purchasing level, and if buyers came quietly into the markets, as they could do at the present time these figures need not be unduly inflated. But if they wait until the demand comes along with a rush, as it must do if the present holding off be maintained, then a heavy toll will have to be paid.

The copper situation seems to be improving. It looks as if the heavy buying from the Far East, as we reported as rumored last week, had taken place, for it is announced that the idle mines of the Amalgamated Copper Company, as well as the Butte Coalition, and North Butte Companies, are to be set in full operation by the end of this week. Apparently a shortage is being anticipated, and as it will probably be at least three months before these mines can produce any copper for marketable purposes, the copper market should strengthen considerably in the near future.

Pig iron is showing greater strength in the Old Country every week, and maintains its reputation for general stability. Locally, figures are holding their own on a demand that is quiet but steady. Quite a good business is being done in antimony, and conditions are strengthening.

Pig Iron—The United States markets are, if anything, slightly weaker, particularly in the Southern grades. This has had a tendency towards the further upsetting of existing conditions. Heavier tonnage has moved during the past week, heavier than at any time since the commencement of the year, but mostly at prices below published quotations. The English markets, on the other hand are showing considerable strength, and prices are steadily tending upwards. Cleveland warrants are now quoted at 50s. 7d., an increase of 10d. on last week. Shipments are exceptionally heavy, and stocks are gradually being depleted, with the result that makers and holders are asking higher prices. Steel making grades, however, are weaker, and are moving but slowly. Steel and finished materials continue in an unsatisfactory condition, and prices are being cut to secure orders. Locally the demand is on the light side, as only to be expected at this time of the year, but indications are for an improvement both as to prices and in demand. We quote: Middlesboro No. 1, $21.50; ex-store, with a shading for large quantities for import; No. 3 $20.50; Summerlee, $25.50.

Tin—Tin, after some fluctuations, closed at £128 10s. in the Old Country, which is £2 lower than last week. Against this the price in New York has risen to $29.75-$30. The spot scarcity has again been produced, and tin is badly wanted. Some fair cargoes are on their way to New York, but they have not yet arrived, and if the demand increases in the meantime, higher figures will be reached as New York merchants are in a position to be squeezed by English holders. The situation locally, is firmer with quotations at 32½c to 33c.

Copper—Copper is still weaker in the Old Country, and is now quoted at £57 7s. 6d., but the situation in New York seems to be improving. This will tend to strengthen figures across the Atlantic. Large sales of copper, principally for foreign account, have been made in New York, and it is stated that the transactions have run into many millions of pounds on a basis around 13c. These sales should pretty well clean up available stocks. Large consumers have also been buying copper, and although the purchases are not large, they are of good bulk, considering the poor demand that has prevailed. In view of the fact that foreign buyers are in the market again, which would be accounted for by the Chinese and Japanese sales and that the domestic demand has improved to some extent, the market should strengthen considerably. The opening of the idle mines of the Amalgamated Copper Co., and of other concerns, indicates an anticipated shortage and copper may yet start towards the 15c basis that we have been promised. The situation locally, is steady, and we still quote 14¾c with shading for large lots.

Spelter—Spelter is again weaker in the Old Country at £21, but the East St. Louis price is being maintained at $4.75. The metal should undoubtedly be stronger, as stocks are light, and the demand good. The sagging is probably due to European unloading, but we do not anticipate that the market will weaken to any great extent. We continue to quote 5½c for foreign, and 5¾c for domestic.

Lead—Lead has gone below the £14 mark, and is in a depressed state. There is little feature to the demand locally, and we now quote lead, imported pig, at $4.25.

Old Materials—The situation is improving somewhat as stocks are getting low, and the demand is slowly picking up. Manufacturers are not making much scrap at present, and there is a likelihood of a shortage later on. Inquiries for cast scrap iron is the feature of the market at present and higher prices are quoted. Prices are unchanged as follows: Heavy copper and wire, 11½c; light copper, 10c; heavy red brass, 11c; heavy lead, 2¾c; wrought iron, $12; No. 1 cast, $14; No. 2 cast, $10 to $11.

TORONTO METAL MARKETS.

Toronto, March 6.—A big advance in tin is the feature of this week's market, figures being advanced locally to from 33c to 34c, the difficulty in securing stocks for present use being the cause of the rise. In New York large premiums are being paid for immediate delivery, futures being weaker than spot quotations. With light shipments on the water, the present situation does not appear likely to be relieved for some time. It is evident that it does not pay to be too pessimistic about making purchases. Tin at 31c in Toronto was near rock bottom, and consumers who took advantage of the low quotation to cover themselves for a month or two at least made no mistake.

Copper is in an interesting position with European warehouses filled and stocks gradually but steadily accumulating in America. In spite of this the Amalgamated Copper Co. is re-opening a large smelter and several mines in

Montana, putting on a full staff capable of producing the limit of production. This news temporarily weakened the U. S. markets this week, but seems more likely to result in a stronger position being assumed as soon as the move is understood. Two explanations are given one being that the Amalgamated Company had grown tired of trying to hold the market from breaking further by curtailing its production, while competing companies were in full operation. The more reasonable expression of opinion, however, is that the Amalgamated Company foresee a shortage of supplies with the increased demand resulting from the resumption of trade activity in the spring and by putting their Montana plant in operation now they will be able to meet the increased demand three months hence and thus prevent a runsway market in the summer. While it is well to watch any peculiar move of the copper market manipulators with suspicion, the putting to work of several thousand men at a time when copper is selling around 12½c in New York can be reasonably taken as a token of confidence in the future by the Amalgamated Copper Company.

The past week has seen a marked change for the good, the first inquiries for forward shipment having been received. It looks as though the expected spring buying movement has arrived, and if this prove to be the case prices are sure to become much firmer, as with a curtailment of production during recent months stocks in many lines are insufficient for holders to experience a brisk demand without finding it advisable to raise prices to cover themselves when rebuying.

Pig Iron—While we make no change in our quotations the market is undoubtedly in a stronger position than for some time past, the approach of spring tending to force buyers to enter the market and arrange specifications to cover their demands during the more active summer months. The English market has gained in strength, but in the States prices are still being shaded on iron and finished materials. Locally we quote $21 for No. 3 Middlesboro and $22.50 for No. 2 Canadian foundry iron.

Ingot Tin—With a fluctuating market in London a scarcity of stocks has developed in New York, and available supplies are said to be cornered. Prices have risen in response to these conditions, and, following New York, quotations in Toronto have been advanced from 31c to 34c in Toronto.

Ingot Copper—The week has seen a declining market in New York, with 12c copper predicted owing to keen competition. The low prices are certain to be taken advantage of by many consumers, however, and a reaction can be looked for. We quote 14c in Toronto, but this is being shaded in quantities.

Pig Lead—Demand is small with prices weak at from $4 to $4.15 per 100 lbs. quoted for imported pig.

Spelter—Weakness has developed and outside markets have declined slightly. We still quote 5¼c for foreign and 5c for domestic.

Antimony—Continues dull at 10c to 10½c.

Old Materials—An improvement is noted in scrap iron, for which some demand exists. Other lines continue inactive, however, at unchanged quotations.

Quebec and Maritime Provinces

Farm Implement Company incorporated at St. John—Steel Foundry to be Established at Moncton by Rhodes, Curry & Co.—Canadian Fairbanks Company Open Office at St. John—Prince Edward Island News.

HALIFAX.

Halifax, N.S., March 4.—The spring trade is now opening up and the prospects for business appear bright. The orders now coming in are satisfactory, and the collections are considered very good. There is considerable uncertainty about prices which have a tendency to fluctuate. There has been a change in the price of spades and shovels, being quoted at 50 per cent. off list. Nails are steady at last quotation, but some other small lines have been reduced in price, such as auger bits and boxwood rulers. Steel lines are also weaker, tire, spring, toe-calk, sleigh shoe being quoted at 25 cents under former prices, and cast steel is quoted at 9 and 12 cents instead of 10 and 12 cents. Tire steel is quoted at $2.75; spring, $3; machine $3.50; and sleigh, $2.75.

Zinc—Casks, $6.75; smaller quantities, $7.25; spelter, 8c; pig lead, English, $5; Canadian, $4.75.

Tin—Ingot, 33c to 35c, according to quality. Sheet coke tin plate, $4.25 and upwards, according to quality and quantity.

White Lead—Canadian, $6.50; Brandram's BB genuine, $7.50.

Bar Iron, $2.30; black sheet iron, 24 gauge, $2.50; galvanized sheet iron, 24 gauge, $4.

Paris green, in tins, 28c to 29c.

* * *

The copper mine at St. Julien's on the north-east coast of Newfoundland, which was inspected by experts on behalf of foreign companies, has been sold to an English syndicate, and the first instalment of the purchase money was paid into the Bank of Montreal at St. John's last week. The new owners propose to work the property on an extensive scale, and their representatives will arrive in Newfoundland early in the spring and proceed north on the first steamer after navigation opens. The development of the property will be a great boom to the people along the coast.

* * *

The seam of coal for which the Dominion Coal Company has been searching at Linjan, Barrois, has been located by William Elworth. The seam is about six feet thick, and contains coal of excellent quality. It is expected that extensive development will take place at the new seam this year.

* * *

A new electric turbine pump is being installed at Dominion colliery. The pump is run by a 100 h.p. motor and is capable of pumping five hundred gallons per minute against a head of 100 feet. The pump will be used as an auxiliary to the steam pump now in use there. It is likely that within a short time the steam pump will be taken out and an electric one installed in its place.

* * *

The Gypsum Company have about one hundred men working in the quarry at St. Ann's, C.B., mining plaster so as to have a surplus stock on hand when navigation opens.

* * *

Rhodes, Curry & Co., of Amherst, have decided to establish a large steel foundry at Moncton N.B., for the manufacture of steel castings and general railway appliances. The company will probably occupy the old Intercolonial Railway shops at the latter place.

ST. JOHN.

St. John, N.B., March 3.—Business continues rather quiet and there has been practically no change in prices. Collections are fair. The unusual interest being manifested in provincial elections has had the effect of putting business matters in the shade.

* * *

A meeting of the creditors of J. S. Coughlon, plumber, who was reported as in financial difficulties, was held on Feb. 24, when it was decided to wind up the estate and dispose of the assets for the benefit of the creditors. The assets are about $1,000, with liabilities about $2,500. Powell & Harrison are solicitors for John Keeffe, the asignee.

* * *

F. D. Sadlier's saw mill at Rowena, Victoria county, was totally destroyed by fire last week. The loss amounted to $5,000, with insurance of $1,000.

* * *

Warren H. Belyea, Cora R. Belyea, William Stymest, Percy Cleveland, of Newcastle, and Edward Bourgeois, of Trocadie, have been incorporated as the Miramichi Farm Implement Company, with a capital of $15,000.

* * *

Thomas W. R. Ellis, formerly of St. John, but for the last three years resident in Yarmouth, has been appointed traveler for Waterbury & Rising, of St. John, and H. H. Dryden, hardware manufacturers, Sussex, in the western counties of Nova Scotia.

* * *

The Canadian Fairbanks Company has opened an office and sampleroom at 58 Water street, for the convenience of its customers in St. John and the territory tributary thereto. G. E. Choinier will manage the company's affairs here.

Told by Ontario Correspondents

Detroit Wire Company May Locate at London—Bright Building Prospects at Kingston—Chatham Pedlar Fined Small Amount—Frost Wire Company, Hamilton, Get Big Contract—Business Transfers at Stratford and Wallaceburg—Linseed Oil Mill for Guelph—Interesting Decision Made by Hamilton Judge.

KINGSTON.

Kingston, March 4.—The plumbers, tinsmiths and general jobbers are at present, and have been for some time past, the busiest men in the metal trades in Kingston, and trade in their line seems to be increasing considerably, but the retail hardware merchants have suffered greatly from lack of trade during the past month, very few sales of any importance being reported. The general opinion is that trade will increase rapidly as soon as spring arrives.

* * *

This has been a good season in this district for skating, snowshoeing and tobogganing parties and larger numbers have indulged in these outdoor sports this year than usual. Many sales were reported during the winter in these lines and the various rinks are constantly kept busy by the local hockey teams. Everyone seems to have gone into this kind of sport this year and a profitable business has resulted.

* * *

Alexander Moore, who for the past three years has been connected with the firm of McKelvey & Birch, resigned his position there a few weeks ago, and has since accepted a position with W. A. Mitchell, hardware merchant, of this city, with which firm he spent some of the earlier years of his career in hardware circles.

* * *

Most of the cut stone for the foundation of the servants' new quarters at the Royal Military College here has been drawn over to Navy Bay and is in readiness for building operations which will commence by the first of April. It is expected it will take at least a year to complete the buildings.

* * *

Frederick Moxley, who for the past few years has been engaged as clerk in W. A. Mitchell's hardware store, resigned his position with that firm a couple of weeks ago, and will probably leave for the west in the near future.

* * *

At a meeting of the board of works the following contracts were awarded for the coming season: Hardware, John Corbett, $261; Lumber, S. Anglin & Co, $1,100.75; Cement, Frontenac Lumber and Coal Company, at $1.18¼ a barrel.

HAMILTON.

Hamilton, March 4.—A rather amusing and at the same time unique coincidence occurred last week in which the motto of patronizing home industry was put to the test. The Hamilton and Toronto Sewer Pipe Company and the Dominion Company, of Swansea, tendered for the city's supply of sewer pipe for this year, and when the matter came before the sewers committee of the city council, the aldermen found themselves in a peculiar position. About 70 employes of the local company were present to urge the city fathers to give the contract to their employers, and a representative of the Swansea company presented a petition signed by a number of the leading contractors in the city, requesting that that company be awarded the contract because it had been the means of lowering prices. To make the matter more complex the tenders of the two firms were about equal when considered in their various aspects. The local firm's tender was $274 lower than the other for the same size of pipe as was mostly used last year, but as the city intends using a somewhat larger pipe this year the Dominion Company's tender proved to be lower on the whole by about $300. This resulted in the aldermen being left to choose between home-made goods and outside products, and in view of the fact that the local tender had such a strong backing according to representation they decided to stand by the well-known motto of patronizing home industry.

* * *

P. W. Sothman has been appointed by the city to prepare the specifications for the proposed municipal street lighting and power plant. Mr. Sothman is a Dane and he was for several years chief engineer of the Hydro-Electric Power commission. He came from New York, and as the power situation here is more complicated than in any other city in Canada, owing to the strong competition between the Dominion Power and Transmission Company and the Hydro-Electric power project, the city decided to get the most capable and at the same time independent engineer available, Mr. Sothman has constructed numerous big electrical plants in Germany and many other parts of Europe and is recognized as one of the best engineers in the business.

* * *

The Brooks-Sanford Hardware Company, of Toronto, has secured handsome new premises for its agency here. During the past few weeks it has removed from its former address on West King street, to 160 East King street, and it is now lodged in very commodious and well-appointed quarters. Since the agency was opened in this city the firm has secured a large share of the hardware business in connection with the building trade, to which it particularly caters. At present it has the contract for all the tiling, brass work and other incidentals, to the extent of about $1,200, on the new $175,000 Central Presbyterian church, and another contract of about $500 on the new Home for Incurables, which is being erected by the city. Other contracts which it has recently completed have been for the material used in connection with the alterations to the post office, to the erection of the terminal station, alterations to the Hamilton and Commercial clubs, Bennett's and the Savoy theatres. The firm looks forward to increased business as the result of its change in location.

* * *

The Frost Wire Fence Company has secured a contract for supplying a South African stock breeding company with 250 miles of wire fencing. It is a rush order and the full staff of employes is working on it, night and day shifts being required. The order was secured through the firm's representative in South Africa. This company has had a very busy season and despite the general depression in trade it has been necessary to work its hands full time and to run a part of its plant at night.

* * *

H. L. Frost, of the Frost Wire Fence Company, was in Cleveland this week looking after the factory there. Since the death of his father several months ago, Mr. Frost has had the responsibility of both factories on his shoulders and the consequence is he has to spend a lot of his time in Cleveland.

* * *

Paul J. Myler, manager of the Canadian Westinghouse Company, stated this week that the indications for a brisk spring business were bright. His firm has been a prey to the general depression and the electrical plant has been working on short time for a couple of months. However, a number of big contracts have been secured, which augur well to keep the shops working steadily until the spring orders are received.

* * *

The P. L. Robertson Company, which was recently incorporated to carry on the manufacture of nails, screws and accessories, will erect a good-sized factory in the manufacturing district as soon as the frost is out of the ground. The company has ordered a lot of machinery and has purchased about thirty acres of land. It is the intention to erect a building costing about $10,000 at first and to so construct it that additions can be made from time to time without interrupting the working of the plant.

* * *

John Tilden, of the Gurney-Tilden Stove Co., fell and broke his arm a few weeks ago, but he is able to be at the office again.

* * *

The congregation of Herkimer Baptist church has decided to erect a new church, at an estimated cost of $20,000.

* * *

S. H. Alexander, of the Wood, Vallance Hardware Company, was presented with an easy chair last week by the members of the Elgar choir, of which he was secretary, in recognition of his services. The choir gave a concert here and in Massey hall, Toronto, last week, both of which were overwhelming successes, for which Mr. Alexander was in no small way responsible.

* * *

Your correspondent was shown through the plant of the Canadian Shovel and

Tool Company this week and the manufacture of the company's patented solid neck shovels was thoroughly explained by the superintendent, Frederick Skelton. This company, which was organized only a few years ago, has been forging ahead in leaps and bounds, and the introduction of this new style shovel has resulted in greatly increased business. The shovel differs from the ordinary run in that the most important part of it, on which the greatest strain is placed—namely, the shank or neck immediately below the handle and connecting the shovel proper—is of solid metal and all one piece. The sockets are made in such fashion that instead of having to throw away the blade whenever the handle breaks any workman can, by removing a rivet, place a new handle in the socket.

The same company is also making a new style patent D handle. The top of the ordinary shovel handle is of solid carved wood, but owing to the constant cracking and breaking of these handles the Canadian Shovel and Tool Company has devised a D-shaped handle which is split and bent and socketed on top, which does away with any chance of warping or cracking. The whole plant of the company in which these shovels are manufactured, is strictly up-to-date and in many parts of it the shaftings are all carried in underground passages.

* * *

The Baynes Carriage Company last week shipped a consignment of 50 high-grade carriages to Sydney, New South Wales. This is an exceptionally large shipment for a Canadian carriage firm. Harry Shillington, of Chatham, formerly traveler for the William Gray & Son's Carriage Company, of that place, has been appointed representative for the Baynes Carriage Company in western Ontario.

* * *

There is a little activity in the building business in preparation for spring. Things have been very quiet in this line for some time, but several building contractors have already laid plans to build a large number of workingmen's homes at reasonable figures.

* * *

An interesting decision was given here this week by a High Court judge in the case of a merchant who was fined $25 by the police magistrate recently on being found guilty of obstructing the sidewalk in front of his store by attracting a crowd to watch a man displaying goods in his window. The magistrate held that the merchant was guilty under a city by-law of obstructing the sidewalk, because he was the cause of the crowd gathering, but the judge held with the appealants that obstructing the sidewalk was meant to refer only to packing cases, etc., which were frequently left on the sidewalks, and that such an obstruction as was caused in this case was due directly to those who stopped in front of the window. Considerable interest was taken in the case by local merchants in view of the fact that previous convictions have been made under the by-law.

A man who pleases only himself must furnish all the applause.

GUELPH.

Guelph, March 3.—J. Muir, of the Goold, Shapley & Muir Company, Brantford, was in Guelph last week, looking over the galvanizing department of the Page-Hersey Tube and Iron Company's pipe mills. The Goold, Shapley & Muir Company are installing a galvanizing plant in their works at Brantford.

* * *

At a meeting of the railways and manufacturers' committee of the city council, S. J. Taylor brought up a proposition to erect a linseed oil mill on the old rolling mill property, if certain conditions were granted.

* * *

The Jardine Foundry, Hespeler, is running nine hours a day, five days per week. Not since 1883 has this foundry been running on short time.

* * *

The Gilson Manufacturing Co. state that they are having far more orders than the capacity of the present plant can turn out, being from two to three months behind their orders. As soon as the weather becomes more suitable for building they intend building an addition to their machine shop, consisting of a machine shop 100 feet long and 60 feet wide. Tenders will be called for immediately. They will employ from 20 to 30 additional hands when the new building is erected.

LONDON.

London, March 3.—Jobbers report an improvement in business over last week. The railways and country roads are again blocked however, and it would not be surprising if a falling off in orders were found at the close of the current week. Seasonable quiet continues in retail lines. Special sales are being conducted by two Dundas Street firms, one a removal sale and the other a "fortieth anniversary" sale.

* * *

The liquidators of the Wilcox Manufacturing Company are disposing of that concern's manufactured goods consisting principally of builders' hardware. Nothing has as yet been done with the plant. Some local parties are talking of taking it over and running it, but the tightness of money holds them back.

* * *

The business conducted by W. L. Myers at Stratford has changed hands and will in future be carried on by Myers & Fisher, brother and brother-in-law, respectively, of the late proprietor.

* * *

H. L. Minds, representing the Union Wire Fence Loom Company, of Detroit, was in the city a few days ago, interviewing the mayor with reference to the raising of local capital for the purpose of starting a branch of the business here. It is estimated that the business could be started on a capital of $5,000 and Mr. Minds desires to get in touch with local men who would be in a position to take up such a proposition.

* * *

The Canadian Organ Company, of Woodstock, has approached the civic authorities with the view of securing in this city a free site, free building, and a $5,000 loan, or rather more than London, at least, is inclined to give as inducements.

* * *

The additions to the Grand Trunk shops are now nearing completion. The glazing is finished in the larger of the two new buildings, which will be used exclusively for working on freight cars. The other building, which it is understood is to be used as a wheel room to relieve the congestion in that department, is also practically completed and both structures will be in use by the time the rush of work comes in the spring.

CHATHAM.

Chatham, March 3.—Judge Dowlin handed down his decision last week in the famous Brodie peddling case. It will be remembered that last fall Benjamin Brodie, a rug peddler, was arraigned in the police court for failure to take out a license under the civic by-law. Magistrate Houston, however, declined to convict, on the ground that the license fee prescribed in the by-law, $100, was prohibitive, and that, consequently, the by-law was invalid. The city, strongly urged by the retail merchants, instituted an appeal, which was heard some months ago. Last week a tardy decision was handed down, reversing the magistrate's decision as to the validity of the by-law. Judge Dowlin, however, agreed with the magistrate that the license was excessive, and accordingly fined Brodie a nominal $1. and costs. The decision, though not entirely satisfactory, is at least a slight advance in the direction of protecting the regular retailers.

* * *

The National Supply Company have rented part of the Stewart Block at Tilbury, and will in the near future make their Canadian headquarters there. Their Merlin branch was closed last week. A new branch is to be opened in Fletcher, however, in addition to that in Tilbury.

* * *

The residence of Jas. Smith, the Wallaceburg hardwareman, just above his store, was last week visited by fire. The loss was considerable but will, it is stated, be fully covered by insurance.

* * *

Munroe & Zavitz, of Wallaceburg have purchased the interests of H. A. and D. W. Stonehouse in the Stonehouse, Munroe & Zavitz Co., Limited, of that place. The company, which has conducted a large general mercantile business, will be continued under the present name, it is understood.

* * *

Mrs. A. Hunter's general store at Charing Cross was broken into one night last week. The plunder secured, however, is reported to have been inconsiderable.

Under the franchise recently granted to Thos. Vickerman for the electric lighting of Tilbury, street lights are to cost $45 each per year, running from dusk to midnight every night. The rate to private consumers is fixed at 15c. per 1000 watts.

* * *

R. J. Clements, of the Tilbury Iron Works, is completing arrangements to build a 3½ horsepower air cooled gasoline engine, specially designed for the use of farmers.

* * *

The long delayed municipal producer gas electric lighting plant is, according to information supplied by Engineer L. G. Read of Montreal, due to arrive in the city this week.

WALKERVILLE.

Walkerville, March 3.—The Ford Motor Co. report business good, and are now busy manufacturing their 1908 models, for which they expect a large demand.

* * *

The Presbyterians of Walkerville have started a mission and expect to start building their church here in the very near future.

* * *

The McGregor Banwell Fence Co., Limited, whose new two-storey concrete factory was completed some time ago, have installed a large quantity of the very latest machinery for the manufacture of their Ideal fence, gates, lawn fence and fence supplies. They report making a new lawn fence, which is becoming very popular among their customers, and they have already booked some large orders for their new Ideal fencing. They also manufacture a Maple Leaf lawn fence and this latter they have had on the market for a considerable number of years.

West of the Great Lakes

Government Seed Cleaning Plant for Saskatoon—Vancouver Ninth of America's Cities in Amount of Building Permits for January—Bridge Construction in British Columbia.

SASKATOON.

Saskatoon, Feb. 29.—Messrs. Elford & Cornish, who carry on a business as metal workers and steam heaters here, have returned from Winnipeg, where they took part in the bonspiel. Last fall they were enterprising enough to erect a curling and skating rink here when other business did not occupy all their time. The venture has turned out very successful, being patronized by both curlers and skaters.

* * *

The trophies of the curling association have been augmented by the arrival of a handsome cup, the gift of Alderman Hopkins, of the west-end hardware store. On the face is the inscription, "Hopkins Trophy, 1908. Presented by W. Hopkins to the Saskatoon Curling Association for Annual Competition." Mr. Hopkins is a keen curler and has just returned from Winnipeg where he took part in several games. He reports business as being fairly good in the Manitoba capital for this season of the year.

* * *

M. Isbister has just moved into his fine new residence on the crescent. It was built last year but has only recently been finished.

* * *

Most of our hardwaremen handle bluestone at this time of the year and some of them are putting it up in small convenient packages. It is used extensively by farmers during seeding time. Last year everyone was sold out of it before seeding was over.

* * *

A seed cleaning station will be established here by the Government for the purpose of cleaning all seed grain which will be distributed throughout this district. This precaution is taken to prevent the spread of weeds and other undesirable seeds which cause the farmers much trouble.

* * *

A good deal of stock and cattle food occupies a prominent position in the hardware stores just now. Powders for various ailments are also handled as a side line, as well as colic remedy, liniment and poultry foods, cattle and sheep dips and the handling of these lines is rapidly proving an excellent money-making side line.

VANCOUVER.

Vancouver, Feb. 28.—While there is nothing very special to report in connection with the trade in this part of Canada, it is gratifying to be able to record a steady improvement and the best of prospects for the coming season. What there is doing in building is shown in the fact that Vancouver was ninth for January among the large cities of America, and not only Vancouver, but other cities in the province, and small places in the developing districts have considerable building. There is little change in conditions in the lumber industry, though in mining things will be doing as soon as the metal market improves. Companies are preparing for this, and at Rossland we find that the capacity of smelters will soon have to be enlarged to take care of the ore that is offering. The West Kootenay Light and Power Company is generating electricity, which is being used throughout the Boundary and in West Kootenay and mining establishments are quick to utilize this convenient power. With the many available water powers in British Columbia, there should be a big business doing in electrical machinery in the next few years.

* * *

Whether the fault lies with Canadian manufacturers in not having an article that can compare with the American, or whether they do not hustle enough for business, the fact remains that the Sechelt Brick and Tile, Ltd., a local company, has ordered a plant, which will cost when installed $60,000, for the making of bricks, from Dayton, O. The first consignment of five carloads is being loaded to-day on scows for transport to the site of the proposed works at Storm Bay, Sechelt peninsula, where a very extensive clay deposit is owned on the waterfront. Those in the company are all local men, the capitalization being $150,000, and half of this has already been subscribed. There is plenty of room for a good brick manufacturing company out here, and in this instance attention will be turned first to the common building article, and later, when trade warrants, terra cotta, etc. It may be that being so far west, that Canadian manufacturers overlook the possibilities of placing machinery outside of lumbering and mining. Developing is proceeding along many lines, and the man on the spot will find many opportunities to do good business.

* * *

Bowman & Connor, consulting engineers, of Toronto, have their eyes on British Columbia, and have offered their services in the preparation of plans and specifications for the bridge to be built across the arm of the Fraser to Lulu Island, by the city of New Westminster. Bridge work in Vancouver and New Westminster is being attended to by J. A. L. Waddell, of Kansas City, who acted on the Government bridge across the Fraser, and reported exhaustively on the three bridges to be built by Vancouver across False Creek, and which will cost a million dollars in the aggregate. As he was here this winter, he was secured by New Westminster at the same time.

* * *

Dredging in the Yukon is offering opportunities, and there Canadian companies are as much in evidence as those controlled by American capital. But Bucyrus, Ohio, with its manufacturing of special dredging appliances, has a cinch almost on the business. Large shipments of machinery are now being taken in over the ice from White Horse, being hauled altogether 410 miles by sleigh. The new company, organized by William Ogilvie, well known throughout Canada, is preparing for extensive work. Not only will dredges be built, but a steamboat also, and an electrical equipment will be installed at Fraser Falls in a year or two to supply power to operate the dredges. The hulls for the first dredge and the steamboat are now being built at White Horse, and will be taken to the Stewart river, the scene of operations, during the freshets in June.

* * *

Business is opening up for manufacturers of machinery used in the canning and evaporating of fruit. This industry is now approaching the stage that canneries are being started up in different parts of the interior, and plants will be installed to be in operation when the fruit comes in again this year.

Modern Conveniences for Farm Homes

The Ninth of a Series of Articles Intended to Help Canadian Plumbers in Educating Residents in Country Districts to the Necessity of Better Sanitary Arrangements.

By Elmina T. Wilson, C.E.

INTRODUCING CONVENIENCES INTO HOUSES ALREADY BUILT.

It goes without saying that both plumbing and heating systems can be put into a house more conveniently at the time the house is being built; but if this has not been done there is nothing to prevent their being installed afterwards.

The installation of the plumbing may conflict with the routine of the household for a week, but as all pipes should be exposed, for sanitary reasons, aside from cutting through ceilings and floors be built just as well to connect to an old house as to a new one, especially if no fixtures are placed in the cellar, and cellar fixtures should be avoided if possible, especially open drains in the cellar floor, even if trapped.

Figure 22 gives a general plan of the buildings on a farm in the Santa Clara Valley, California. As the contour lines show, both barn and privy are on ground higher than the surface of the well, the privy being on ground higher even than that upon which the house stands. The privy vault is never cleaned, but ashes and lime are used once in a while, and then the old vault becomes full a new one is dug. The water is carried up the hill to the house, a distance of 150 feet. The plan of the house as given shows the conveniences that could be added with slight changes.

An elevated tank is a favorite method of getting water pressure in California, as it is not necessary to provide against freezing, and one could be used in this case with a windmill or engine to pump the water into it. Three hundred feet of galvanized iron pipe would carry the water to both house and barn. The changes to be made in the kitchen are very simple. The bedroom closet that extends into the kitchen could be taken out and a closet provided from one end of the storeroom. The storeroom is converted into a pantry. The wall of the present pantry is extended 4 feet, which changes it into a fine-sized bathroom. The sink and laundry tubs are placed along this wall, allowing all the fixtures to connect to one soil pipe.

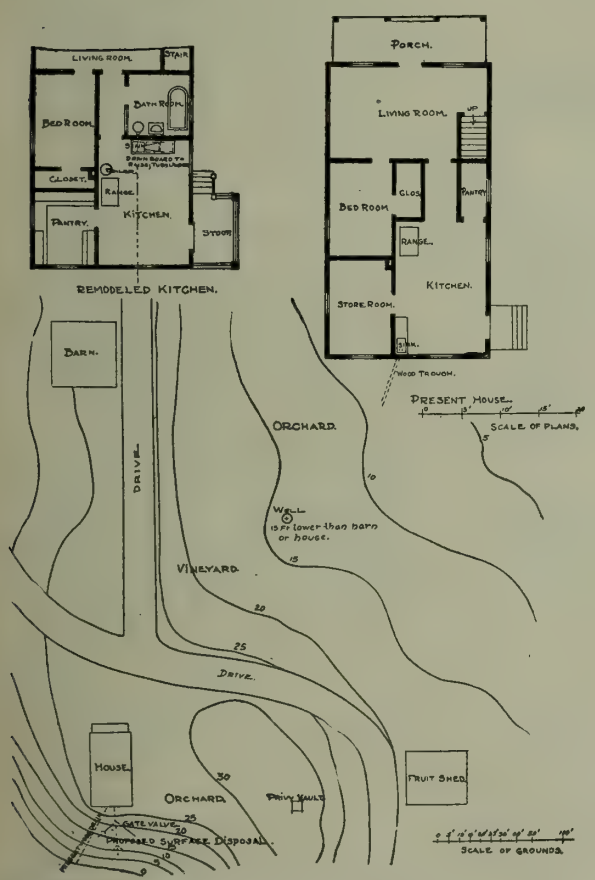

Fig. 22.—Present and Improved Plan for a Western Fruit Farm.

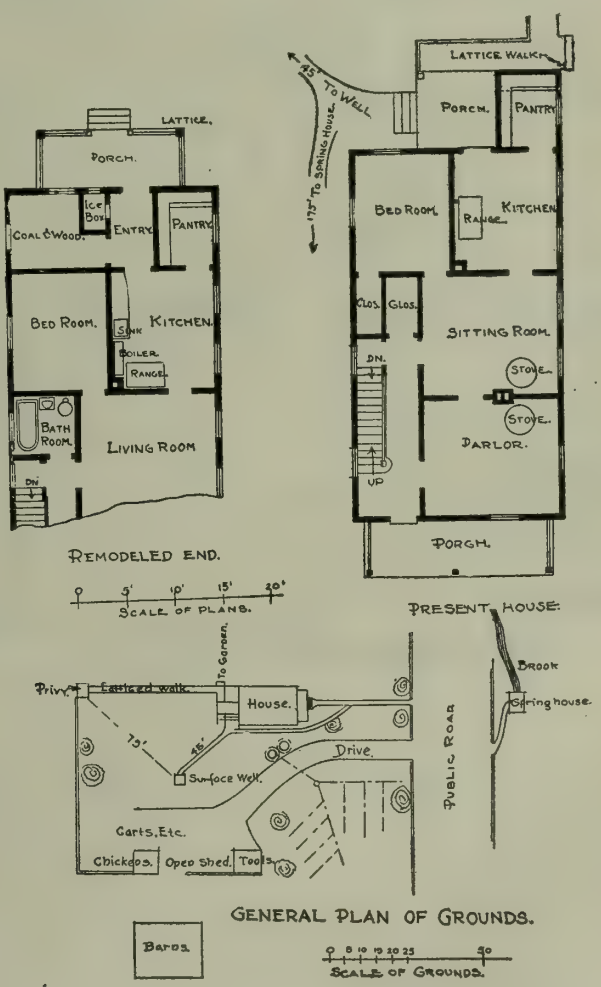

Fig. 23.—Present and Improved Plan for an Eastern Farm Home.

little inconvenience is met with in putting the pipes and fixtures in place. A water back can be fitted to almost any kitchen stove to supply heat to a small boiler, or a water coil can be placed in the combustion chamber of the furnace, which will furnish a more abundant supply during cold weather, and an independent heater, built to use any desired fuel, can be employed when there is no fire in the furnace. The waste water and sewage disposal system can

The surface disposal system could be used for the sewage, a single-chambered flush tank collecting the wastes and discharging them intermittently, by means of two sets of openings, over the steep side of the hill.

Figure 23 gives a general plan of the buildings on a farm in eastern New York with a plan of the house, drawn on a large scale, and a plan for the introduction of water into the kitchen and the installation of a bathroom.

At present a spring across the road furnishes water to a milk cooler and a spring higher up the hill would furnish an adequate gravity water supply for the house. The piping of this water to the kitchen has often been talked of, but has never been done. As the kitchen wing is only one storey high an attic tank could be put in over the kitchen and the water piped from this spring to the tank by ¾-inch galvanized iron pipe. The overflow from the tank could be carried to a stock tank in the barnyard. A hot water boiler could be connected to a water back in the kitchen range and hot water be furnished sink, the bathtub, and the lavatory. A bathroom could be made by removing the partition between the two closets and putting a window in the outside wall. The waste pipe from the kitchen sink could be connected to the soilpipe in the bathroom. The disposal of the sewage could be obtained by the use of the subsurface irrigation system, the draintile being laid in the grass lot across the drive, as shown by the broken lines on the general plan. The floor

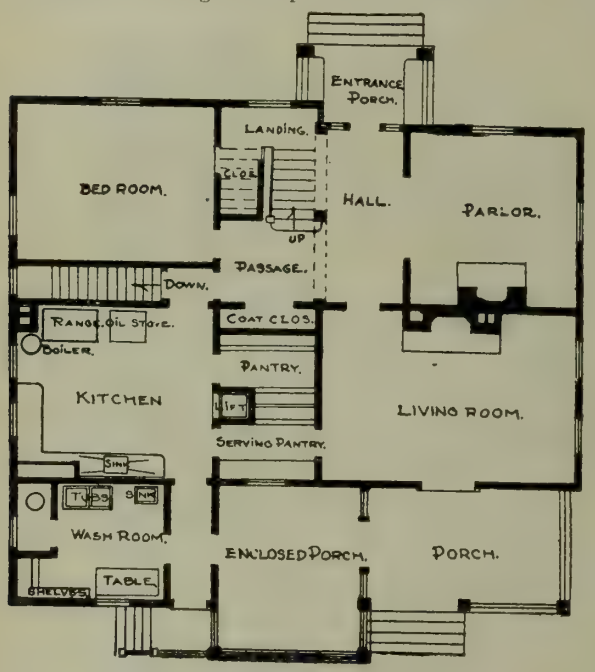

Fig. 24.—Plan for Farmhouse.

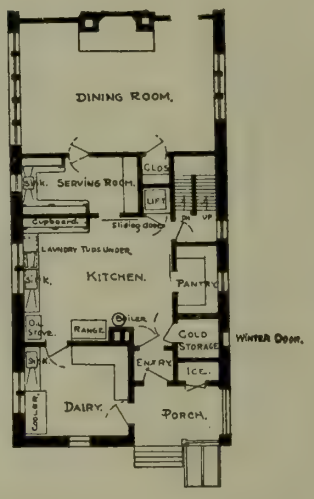

Fig. 25.—Plan for kitchen.

of the back porch could be extended and a woodhouse built here to furnish fuel for the kitchen range. A small furnace in the cellar would not require much more coal than the two heaters now used and would make the rooms more comfortable with less work.

The requirements of no two families are ever the same, but these suggestions of improvements are made with the hope that they may be a help in solving similar problems.

BUILDING ON PAPER.

With the development of good roads, the telephone, the daily free mail delivery, the farmer is becoming less isolated and desires to instal the improvements of his neighbors of both country and city. The most practical way of doing this is to lay the buildings out on paper, making provision for future extension wherever possible.

A plan that contains some of the essentials of a comfortable home is given in figure 24. The living room, which is the dining room, overlooks the garden and is connected with an enclosed porch which can be used for a summer dining room, the passage from the kitchen being arranged for this. The fireplaces are the best ventilators the rooms can have as well as affording a cheerful means of warming the room in spring and autumn before the furnace fire is started. The lift carries the prepared food, that should be kept cool, to the cellar without the need of going up and down stairs. If a pneumatic tank is used in the cellar the air near it is cool in the summer and advantage can be taken of this as a substitute for a refrigerator. The kitchen sink is against the laundry partition, while the bathroom would be on the second floor and over the laundry to keep all the plumbing together. The laundry can be used for a washroom if desired, and the water closet off of it is convenient from both outside and in.

The planning of each room also pays. Figure 25 shows a kitchen and dairy, with accompanying conveniences. The ice box of the cold storage room can be filled from the porch and a winter door is provided, so ice need not be used in cold weather. The kitchen sink is supplied with hot and cold water and although the kitchen must also be used as a laundry, the stationary tubs are provided with a cover and serve as a table when not otherwise used. A lift brings the fuel from the cellar, and is used to take vegetables and fruit to and from the storeroom. Provision is made for washing the dishes in the pantry convenient to the shelves upon which they are kept, and plenty of shelf room is provided wherever it is needed.

The arrangement being first made on paper and lived in by the imagination, many improvements will suggest themselves, until a home adapted to the use for which it is built will be the result when the plan is embodied by the carpenter and mason. The man that can make two blades of grass grow where one grew before has done something; but the man who makes one step do what took two before should also be given due credit.

DOES DUMPING PAY?

The recent sale of 100,000 tons of sheet bars by the United States Steel Products Export Company to Swansea calls for this statement by the "Iron and Coal Trades Review" of London: "In those countries which indulge in the practice of dumping, much has been made in the past of the beneficent effects of such steel exports, through the increase of employment secured thereby to home industries. Of course there must be an advantage to somebody in these transactions, otherwise they would not be carried through, but it is rather difficult to discern where that advantage comes in. If the United States Steel Corporation sells 100,000 tons of sheet bars to South Wales or the Midlands, it is sufficient to play havoc with the market for these commodities in Great Britain, but it is doubtful whether it brings any corresponding advantage to the United States Steel Corporation, or the Stahlwerks Verband, as the case may be. The particular species of dumping which sells American sheet bars to Swansea at 90s. delivered, whereas the home price at Pittsburg, is 121s, is likely to do the American iron trade more harm than good. Indeed, at this difference in price it can only be the stringent clauses of the contracts made with British buyers of sheet bars, and the knowledge that their deliveries would be indefinitely delayed, which would keep them from reselling these sheet bars back to the United States."

MALLEABLE IRON.

The value of malleable iron as a material of construction lies in certain special properties which are in a sense intermediate between those of ordinary grey cast iron on the one hand and mild steel on the other. Its most valuable properties are the readiness with which it may be machined, a fairly high strength under tensile strain, a considerable degree of ductility, and a consequent ability to withstand impact strains under working conditions. It may be readily bent, and castings may, therefore, be adapted without difficulty to the positions in which they are to be used. In these respects malleable iron is undoubtedly inferior to mild steel, and steel castings are, therefore, in demand for uses in which the conditions are more severe, as for example, in the case of car couplings. But the difficulties attendant upon making them, and the consequent higher cost of their production limits their application to situations where higher strength is of the utmost importance. Ordinary grey cast iron on the other hand, while it is cheaper than malleable iron, and while it is admirably adapted for use under compression, is incapable of withstanding severe shock, will not bend, and is unsuited to working under tensile strain.

Malleable iron, or to speak more plainly, iron which is capable of extension or of being shaped under the hammer, is simply iron in a purer form than simple cast iron, which, on account of the presence of carbon, is brittle. Malleable iron castings are first cast from pig iron and afterwards partially decarbonized by heating for several days in the presence of some substance, such as hematite (a species of iron ore).

Trade Announcements

Catalogues, booklets and other printed matter issued by manufacturers, jobbers, etc., for distribution to the retail trade will be reviewed in this department. Senders of catalogues, etc., for review should draw attention to new lines and retailers, when sending for samples, etc., should mention this paper to show that they are in the trade.

New Marlin Shotgun.

An attractive booklet describing Model 24 of the Marlin repeating shotgun has recently been published by the Marlin Fire Arms Co., New Haven, Conn. Model 24 contains a number of improvements on last year's models. It has the simplicity and strength of mechanism, the safety lock, double extractors and other up-to-date features of former models, with important improvements for the safety, comfort and convenience of the shooter, which will greatly add to its success and in addition is fully guaranteed by the makers against any imperfection of material and workmanship. Dealers can get a supply of the new folders by writing the above company.

Summer Requirements.

Wood, Vallance & Co., Hamilton, have issued a very attractive catalogue entitled "Spring and Summer Requirements for the Home, Farm and Garden."

All lines likely to be required under the above head are displayed in the catalogue. The information regarding each line is particularly clear and the cuts are neatly arranged. The catalogue has evidently been prepared with a great deal of care and should be of interest to hardware merchants all over the country. It is full of practical suggestions and should be studied by every dealer who wants to have his stock complete for the coming season. A copy can be had for the asking.

Cat's Eye Glass.

Cat's eye glass is a specialty recently introduced in this country by the Maximum Light Window Glass Co., of London. The new glass is made on a scientific principle and is not merely an ornamental glass of the usual figured rolled type. The arrangement of lenses and discs is such that the concentration on the discs and the refraction of the light by the lenses produce peculiar effects on the glass and from this the name "Cat's Eye" is derived. This peculiar effect is most noticeable in a half light and for that reason has made itself very popular in Europe for interior work.

The formation of curves on this glass makes it most sensitive to all surrounding lights and columns. When glazed in windows which face lawns or trees the even colors of the article reflected will be reproduced.

Samples of the new glass will be sent post paid by mentioning this paper.

New Liskeard is experiencing some difficulty with the new waterworks system. A pressure of 200 pounds to the square inch, which was put on the pipes proved too much and a number of joints blew out. The citizens are satisfied with the water supply which has to date been very limited.

CONDENSED OR "WANT" ADVERTISEMENTS.

RATES.

Two cents per word first insertion; one cent per word subsequent insertions.

Five cents additional each insertion where box number is desired.

Contractions count as one word, but five figures (as $1,000) are allowed as one word.

Cash remittances to cover cost must accompany all advertisements. In no case can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

RULES FOR COPY.

In addressing replies care of HARDWARE AND METAL don't fail to give box number.

Replies addressed to HARDWARE AND METAL boxes are re-mailed to advertisers every Monday, Wednesday and Friday.

Requests for classification will be followed where they do not conflict with established classified rules.

Orders should always clearly specify the number of times the advertisement is to run.

All "Want" advertisements are payable in advance.

AGENTS WANTED.

This is the problem of many manufacturers who are anxious to get a foothold in Western Canada. It will be easily solved if HARDWARE AND METAL is given the opportunity to solve it.

WANTED—Hustling agents to sell Weldarine, the only compound that will weld cast-iron, making the joints stronger than the original metal; tremendous demand. Will sell to responsible parties the rights for Ontario and Quebec. Weldarine Agency Company, D.S. Morgan Building, Buffalo, N.Y.

FIRST-CLASS English firm, manufacturing A1 line of metal polish, wishes to secure Canadian agents for Maritime Provinces, and Western Canada. Have already secured agents for Ontario, who have handled their line for nearly a year, and have found it very ready seller. For full information apply Box 690, HARDWARE AND METAL, Toronto. (4tf)

AGENCY WANTED.

AN old established British firm of glue manufacturers are desirous of arranging for representation in various parts of Canada. Correspondence to "Glue," care of HARDWARE AND METAL, 88 Fleet Street, London, E.C., England. (17f)

ARTICLES WANTED.

If you cannot afford to buy a new counter, show case, screw cabinet, store ladder, or some other fixture which you could use to advantage, try a "Want Ad." under "Articles Wanted," and you may get what you want at a bargain price.

WANTED—Cornice brake, 8 feet. Give full particulars with best price. Box 698, HARDWARE AND METAL, Toronto. (9)

BUSINESSES FOR SALE.

Somewhere in Canada is a man who is looking for just such a proposition as you have to offer. Our "For Sale" department brings together buyer and seller, and enables them to do business although they may be thousands of miles apart.

HARDWARE and tinware in good growing village. Stock about forty-five hundred. Turnover ten to twelve thousand, easily increased. No opposition. Building for sale or rent. Death of owner. Principals only dealt with. Box 696, HARDWARE AND METAL, Toronto. (9)

FOR SALE—A good going and paying business Stock about five to six thousand. Will bear investigation. Box 700, HARDWARE AND METAL, Toronto. [10]

A growing established business in stoves, furnaces, kitchen utensils, cutlery, gas goods, tinsmithing, etc. Turnover $20,000 last year. Room for big growth as population is well over 16,000, good stand and long lease, first class stock and tools, about $6,000. Proprietor must sell as other interests are compelling. A bargain for a quick sale. Box 702, HARDWARE AND METAL, Toronto. (12)

HARDWARE stove and tinware business in one of the best manufacturing towns in Ontario. Stock about $10,000, turnover $50,000; good profits; good reasons for selling. Address Box 704, HARDWARE AND METAL, Toronto. (11)

SITUATIONS WANTED.

Travellers, clerks, or tinsmiths, wishing to secure new positions, can engage the attention of the largest number of employers in their respective lines, by giving full particulars as to qualifications, etc., under "Situations Vacant."

WANTED—By experienced hardwareman, position in first-class retail hardware store or in wholesale house. Good Winnipeg references. Box 2, HARDWARE AND METAL, Winnipeg. (10)

POSITION by hardwareman—Good general experience; best references. Box 703, HARDWARE AND METAL, Toronto. [12]

WANTED by April 1st, position as hardware clerk. Six years' experience, wholesale and retail. A1 references from present and former employers. Box 10, HARDWARE AND METAL, Union Bank Building, Winnipeg. [11]

SCOTCHMAN, open for engagement shortly, most extensive experience open fire grates and fireplaces, every type on British market. Also stoves and mantel-pieces. Accustomed to best class trade and architects' work. Accustomed also estimating and handling workmen; has knowledge also of cutlery and general hardware. Thoroughly practical and capable salesman, competent to take any responsibility; character exemplary. Box 49, HARDWARE AND METAL, 88 Fleet Street, London, Eng. (10)

BUSINESS CHANCES

PARTNER WANTED—To take half interest in a good new hardware and harness store; location, Saskatchewan; would like one with some experience as harness-maker, and invest about $2,000 in money; will give full particulars on application. Box 694, HARDWARE AND METAL, Toronto. (9)

WANTED—Good live hardware business in Manitoba, Saskatchewan or Alberta. Owners only. Box 22, HARDWARE AND METAL, Winnipeg. (10)

PARTNER wanted to take half interest in hardware business. Must have some hardware experience and invest $1,500. Box 688, HARDWARE AND METAL, Toronto. (10)

MANUFACTURERS of standard reputation in hardware and metal branches, who desire to be represented by New York agent, will address "Domestic and Foreign," care of HARDWARE AND METAL, Toronto. (12)

A WHOLESALE established stove business; patent heating stoves five years on market and successful workers. Would go well with other lines. Proprietor lacks capital to push business. Patterns, stoves and material about $7,000. Would take half cash balance stock in reliable company or 75 cents on the dollar for cash sale. Full investigation solicited. Box 701, HARDWARE AND METAL, Toronto. (12)

BUSINESSES WANTED

A GOOD live hardware, stove and tin business in Ontario. Box 699, HARDWARE AND METAL, Toronto. (11)

SITUATIONS VACANT.

You can secure a "five-thousand-a-year" manager, or a "five-hundred-a-year" clerk, by stating your wants under "Situations Vacant."

SALESMAN wanted for hardware trade to carry good selling side-line on commission; give references Box 906, Galt, Ont. (10)

WANTED—An up-to-date hardware man who has a thorough knowledge of tinsmithing and furnace work; one who can work and manage either department when required, must be a hustler and not afraid of work. Apply at once giving reference and stating salary required. D. Hall Sutherland, Conora, Sask. (10)

WANTED by April 1st practical man who can superintend the erection of steel water works stand pipes and push the work along with dispatch. Must be experienced man, sober and reliable and be able to furnish recommendations from reliable firm he has worked for. Apply Box 695, HARDWARE AND METAL, Toronto (10)

Business for Sale

AS we intend to confine ourselves to the Wholesale Hardware business in future, we have for sale our retail general hardware business. This business has been established for over twenty years and always has been and is now a profitable one. Correspondence solicited, but as it will require $10,000 cash at least to swing the transfer, we expect evidence of your good faith when you write.

McLENNAN, McFEELY & CO.
Limited
VANCOUVER, B.C.

MANITOBA HARDWARE AND METAL MARKETS

Corrected by telegraph up to 12 noon Friday, March 6, Room 511, Union Bank Bldg, Winnipe

Spring business is now well under way and all the wholesale houses are busy. While the demand for building supplies is not so heavy as a year ago, general business is quite active and there is no particular reason for complaint.

Wire—Barbed wire, 100 pounds, $3.25; plain twist, $3.40; staples, $3.40; annealed wire, $2.90 base; oiled, 10c extra; bright iron, $3.10 base; brass spring wire, 32c base; plain galvanized wire, 6, 7 and 8, $3.70; No. 9, $3.25; No. 10, $3.70; No. 11, $3.80; No. 12, $3.45; No. 13, $3.55; No. 14, $4.10.

Poultry Netting—The discount is 57½ per cent.

Horseshoes—Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

Horsenails—No. 10 and larger, 22c; No. 9, 24c; No. 8, 24c; No. 7, 26c; No. 6, 28c; No. 5, 30c; No. 4, 36c per lb. Discounts: "C" brand, 40, 10, 10 and 7½ p.c.; "M.R.M." cold forged process. List Feb. 1, 1908, Capewell brand, quotations on application.

Wire Nails—$3 f.o.b. Winnipeg, and $2.55 f.o.b. Fort William.

Cut Nails—Now $3.20 per keg.

Pressed Spikes—½ x 5 and 6, $4.75; 5-6 x 5, 6 and 7, $4.40; ¾ x 6, 7 and 8, $4.25; 7-16 x 7 and 9, $4.15; ½ x 8, 9, 10 and 12, $4.05; ¾ x 10 and 12, $3.90. All other lengths 25c extra, net.

Screws—Flat head, iron, bright, 80, 10, 10 and 10; round head, iron, 80; flat head, brass, 75; round head, brass, 70; coach, 65.

Nuts and Bolts—Bolts, carriage, ¾ or smaller, 60 and 5 per cent.; bolts, carriage, 7-16 and up, 55; bolts, machine, ¾ and under, 60 and 5; 7-16 and over, 55; bolt ends, 52½; sleigh shoe bolts, ¾ and under, 55; 7-16 and over, 45; machine screws, 60; plough bolts, 50; square nuts, cases, 2¾, small lots, 2¼; hexagon nuts, cases, 2¾; small lots, 2¼; stone bolts, 70 and 10 per cent.

Rivets—Iron, 60 and 10 per cent.; copper. No. 7, 36½c; No. 8, 37½c; No. 9, 38c; No. 10, 40c; No. 12, 43c. Assorted, No. 8, 38½c and No. 10, 41½c.

Green Wire Cloth—$1.75 per 100 square feet.

Coil Chain—¼-in., $7.25; 5-16, $5.75; ⅜, $5.25; 7-16, $5; ½, $4.75; 9-16, $4.70; ⅝, $4.65; ¾, $4.65.

Shovels—Discounts are 40 and 5 p.c.

Harvest Tools—50, 10 and 5 p.c.

Axe Handles—Turned, s.g. hickory, $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

Axes—Bench axes, 40 and 5; broad axes, 5½ to 7½, $21.00 per dozen; 7¾ to 8¾, $23.00 per dozen; Royal Oak, per doz., $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.50; Copper King, $8.25; Columbian, $9.50; handled axes, North Star, flint edge, $10.75; Copper King, $10.50 per dozen.

Auger Bits—"Irwin" bits, 47½ per cent., and other lines, 70 and 10 per cent.

Blocks—Steel blocks, 35; wood, 60.

$7.75; Black Prince, $9.25; Standard

Hinges—Light "T" and strap, 65.

Hooks—Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

Files—Arcade, 75; Black Diamond, 60; Nicholson's, 62½ per cent.

Locks—Peterboro and Gurney 40 p.c.

Stove Pipes—6-in., per 100 feet length, $9.25; 7-in., $10.

Tinware, Etc.—Pressed, retinned, 70; pressed, plain, 75 and 2½; pieced, 25; japanned ware, 35; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; White, 70 and 5; Diamond, 50; Granite, 60 per cent.

Galvanized Ware—Pails, 37½ per cent.; other galvanized lines 33 1-3 per cent.

Solder—Quoted at 22c per lb.

Lanterns—Cold blast, per dozen, $7; coppered, $9; dash, $9.

Churns—45 and 5; list as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

Wringers—Royal Canadian, $36; B.B., $40.75 per dozen.

Lath Yarn—10½c.

Rope—Sisal, 10½c per pound, and pure manila, 14½c. British manila, 11½c.

Building Paper—Anchor, plain, 60c; tarred 62½c; Victoria plain 67½c; tarred 84c; No. 1 Cyclone, tarred, 84c; No. 1 Cyclone, plain, 66c; No. 2, Joliette, tarred, 69c; No. 2, Joliette, plain, 51c; No. 2 Sunrise, plain, 56c; Jubilee plain, 75c; Jubilee tarred, 88c; Buffalo plain, 66c; Buffalo tarred, 69c; Lion plain, 55c.

Corrugated Iron and Roofing, Etc.—Corrugated iron, 28 gauge, painted, $3; galvanized, $4.10; 26 gauge, $3.35 and $4.35. Pressed standing seamed roofing, 28 gauge, $3.45 and $4.45. Crimped roofing, 28 gauge, painted, $3.20; galvanized $4.30; 26 gauge, $3.55 and $4.55.

Ammunition, Etc.—Cartridges, rim fire, Canadian, 50 per cent.; American, 33 per cent.; pistol sizes, Canadian, 25 per cent.; American, 5 per cent.; military, Canadian, 20 per cent. off. American, 10 per cent. advance. Primers, $1.55. Loaded shells: English and Canadian makes, 12 gauge black soft, $18; 10 gauge, $22.50; 12 gauge smokeless, chilled, English, $24; Canadian, $23; 10 gauge smokeless, chilled, English, $28; Canadian, $27. Shot: Drop, per 100 lbs., $6.75; chilled, $7.15; buck, $7.55; 28 ball, $7.95. Powder: F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.

Iron and Steel—Bar Iron basis, $2.70. Swedish iron basis, $4.95; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel: Black Diamond, 100 lbs., $9.50; Jessop, $13.

Sheet Zinc—$8.50 for cask lots, and $9 for broken lots.

Pig Lead—Average price is $6.

Lead Pipe—Quoted at $7.25.

Copper—Planished copper, 29½c per pound; tinned, 26½c.

Iron Pipe—Black pipe, ¼-in., $2.70; ⅜, $2.85; ½, $3.75; ¾, $4.75; 1, $6.75; 1¼, $32.30; 3½, $40.50; 4, $46; 4½, $54. Galvanized: ¼-in., $3.65; ⅜, $3.50; ½, $4.50; ¾, $5.80; 1, $8.40; 1¼, $11.40; 1½, $13.80; 2, $18.40.

Fittings—Wrought couplings, 55 per cent.; nipples, 70 per cent.; classified malleable fittings, 25 per cent.; malleable bushings, 50 per cent.; malleable unions, 55 per cent.

Galvanized Iron—Apollo, 16-gauge, $4.15; 18 and 20, $4.40; 22 and 24, $4.65; 26, $4.65; 28, $4.50; 30-gauge or 10¾-oz., $5.20; Queen's Head, 20, $4.60; 24 and 26, $4.90; 28, $5.15.

Tin Plates—I.C. charcoal, 20x28, box, $10; IX charcoal, 20x28, $12; XXI charcoal, 20x28, 14.

Terne Plates—Quoted at $9.50.

Canada Plates—18x21, 18x24, $3.50; 20x28, $3.80; full polished, $4.30.

Lubricating Oils—600 W. cylinders, 80 cents; Maple Leaf cylinder, $1 per gal.; 700 A. cylinder, 75c; Sterling cylinder, 55c; 600 A. cylinder, 50c; Capital cylinder, 59c and 54c; Solar red engine, 32c; Atlantic red engine 29c; heavy castor, 29c; medium castor 28c; Ruddy harvester 30c; standard gas engine oil 36c; Renown engine oil, 38c.

Petroleum and Gasolene—Silver Star, in bbls., per gal., 20c; Sunlight, in bbls., per gal., 22c; per case, $2.45; Eocene, in bbls., per gal., 24c; per case, $2.60; Pennoline, in bbls., per gallon, 25c; Silver Light, 22c; Starlight, 20c per gal.; Sterling Light, 24c per gallon. Engine gasolene, in barrels, gal., 24c, f.o.b. Winnipeg, in cases, $2.60.

Bluestone—7c lb.

Paints and Oils—White lead, pure, $6.50 to $7.50, according to brand; bladder putty, in bbls., 2½c; in kegs, 2¾c; turpentine, barrel lots, Winnipeg, 77½c. Linseed oil, raw, Winnipeg, 67c; Calgary, 79c; Lethbridge, 79c; Edmonton, 80c; boiled oil, 3c per gallon advance on these prices.

MILLER MORSE CHAMPIONS.

The supremacy of the hardware branch of the mercantile world was upheld in hockey circles in Winnipeg by the Miller-Morse Wholesale Hardware Club, winning the Mercantile League, composed of the best teams obtainable among the many Winnipeg business houses. The performance of the hardware boys is all the more creditable, owing to the fact that they went through their series without losing a game.

During the two previous seasons the Miller-Morse Club were competitors in the Wholesale Hardware League, and won the championship cup on both occasions. This year they advanced a step and have proved by their performances that their aim was none too high in seeking honors against all mercantile teams. The seven who were the means of keeping the Miller-Morse reputation at the top were: Whinery, goal; Ingo, point; Foulds, cover-point; Ross, rover; Saul, left wing; Cummings, centre; Bissett, right wing.

The office-bearers during the season were: Patrons, H. Miller, F. Morton Morse, A. Reed; Hon. pres., L. A. Blackwood; pres., J. M. Lynch; vice-pres., A. A. Cattanach; secy.-treas., O. Ingo; manager, W. M. Irwin; executive committee, J. J. Fleming, M. Curtin, J. H. Foulds, W. M. Irwin and J. J. Sullivan.

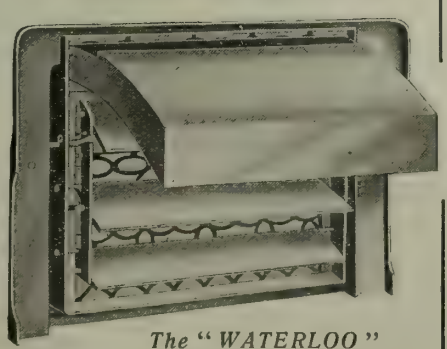
The "WATERLOO" Open

Moisture in Warm Air

Among people connected with heating systems—whether hot water, steam or warm air—it is generally admitted that the heated atmosphere is often lacking in moisture. This lack is effectively overcome by the

"WATERLOO" REGISTER

which is provided with a



Vapor Pan

All heated air passing through a Waterloo Register comes in contact with this unique and exclusive attachment, which at the same time deflects the moist heat into the room. Every Waterloo register is provided with a foot rest, by which the register may be opened and closed.

Write for our Catalogue, it will interest you.

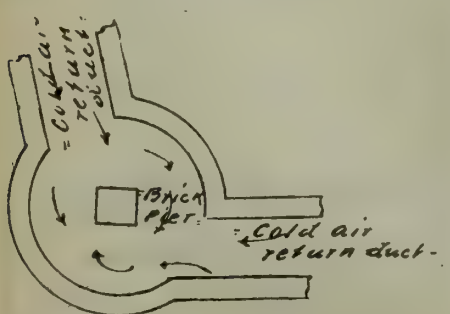
Practical Talks on Warm Air Heating



The Sixteenth of a Series of Articles by E. H. Roberts.

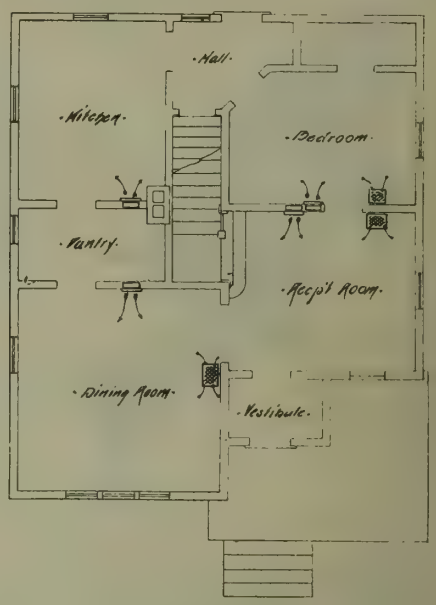
The increasing prosperity of the country is nowhere more apparent than in the vast number of small modern houses that are being built, and this in spite of the high prices that are being asked for materials. It is significant also that these cottages are usually equipped with first-class open plumbing, hardwood floors, etc., and are heated either by furnaces or hot water.

We have already shown several plans for cottage heating, but in view of the large amount of this class of furnace work, perhaps it is not out of place to consider another layout which, while conforming to the general rules mentioned in former chapters, has some features which are new.

Basement Plan.

Detail of Furnace Pit.

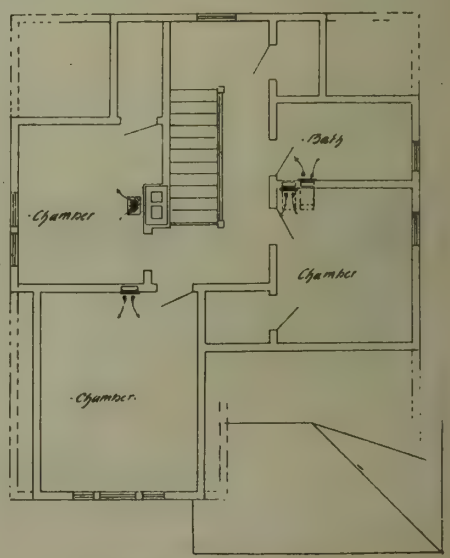
Side Wall Registers.



The warm air registers are all shown in the side walls, where they are out of the way, and where they will do better work than registers placed in the floor. Each of these side wall register boxes is provided with a collar on top which connects with a wall stack running to the chamber above, and the valve in register can be adjusted to proportion the air between the two rooms to suit the occupants.

By making this double connection, only one basement pipe is required to heat two rooms and there is a consequent saving not only in materials, but in efficiency, for the fewer pipes off the furnace the more positive will be the circulation of the warm air and the less loss of heat by radiation into basement.

Cold Air Supply.



After locating the furnace and arranging for the warm air connections, the next important step is to secure an adequate cold air supply.

In this climate an inside cold air supply is almost a necessity for with the outside temperature at zero or perhaps 40 degrees below, it is hardly reasonable to expect any furnace to heat this air to 90 or 100 degrees above without an extravagant waste of fuel; moreover, it is impossible to warm any house satisfactorily unless there is a circulation of cold air out of the rooms to correspond with the current of warm air coming into them, and the natural method is to return a large part, at least, of this air back to the furnace, just as the water in a hot water plant is returned to the boiler after it has passed through the radiators.

First Floor Plan.

The cold air return faces can be placed either in the floor or the side walls, but unless the owner seriously objects, we would advise placing them in the floors, where they will get the coldest stratum of air in the room and where there will be the least trouble in making the connections.

Second Floor Plan.

The Accompanying Plans.

In this plan the cold air is taken from the reception room, dining room and bed room on the first floor, and the open stairway provides a means of exhausting the cold air from the entire second floor.

The cold air returns are shown under ground here because these are more out of the way than overhead pipes would be and on account of the location of stairway and the warm air pipes it would be difficult to make a satisfactory cold air connection on right hand side of furnace.

Of course, there are times when a certain amount of outside air is desirable and we have indicated on the basement plan an outside fresh air intake pipe 10 inches in diameter, running overhead to the point indicated by the circle, where it drops vertically to connect with furnace casings, just above basering. To prevent this outside air from interfering with the inside returns, the cold air shoe should extend inside casings and be closed at bottom and sides.

BOOSTING STOVE SALES.

Hardware merchants in every city are constantly trying to outdo each other in the annual turnover, and in these days of keen competition advertising is made to bear a very important part. In the stove department an excellent plan has been operated by some progressive firms which has proved its ability to draw custom to the department and incidentally has been responsible for the sale of large numbers of stoves and ranges.

The plan is to get an expert cook, who is perfectly familiar with the stove, to come to your store and demonstrate the worth of the stove by dispensing tasty, well cooked articles to the public. The plan necessitates the expenditure of considerable money, but the stove foundry from whom you buy your line of stoves will likely be glad to assist if the dealer wants a demonstration, and will push the sale of his make of stoves.

It should be remembered that the benefits of this scheme will last for some months after the demonstration, as many who attend your store when you are dispensing free cookery are not ready to buy, but months or sometimes years later, when in need of a stove, they will buy one of the make they saw demonstrated because of the favorable impression made at the time.

In addition to the many possible stove customers you treat, doesn't everyone who comes to your store look around, and isn't that the reason you advertise—to get them in the store? If your salesmen are wideawake and of the right sort, you may easily reap a harvest from the sale of any of your hardware lines which, only for the stove demonstrating, would have gone to your competitors.

Be the first in your town to have a stove demonstration and make inviting displays of kitchen goods, enamelware, etc., priced in plain figures, to catch the eye and open the purse of the visitors to the store during the demonstration.

Some men make a specialty of giving away advice that isn't worth that much.

The Value of Prepared Paint

Customer—"I don't believe prepared paint is any better value than lead and oil."

Dealer—"Probably the best evidence of the true economy of prepared paint is the great extent to which it is used by the largest individual consumers in the world—the railway and steamship companies. The bulk of their purchases are in prepared paints. If lead and oil gave them better results they would buy lead and oil and mix them themselves. Practically all of the great railway systems in Canada and the United States use great quantities of Sherwin-Williams Prepared Paints.

If you are not an S-W. Agent write us today.

Evolution of House Ventilation

The Second Article by E. D. Sidman in Building Man agement.

The introduction of the hot air furnace created a new epoch in heating, as it concentrated the heat for the entire building into one fire pot, doing away with small fires scattered through the building in stoves, etc., confinining all the coal, ashes and dirt entailed by them to the basement or cellar, and this one point should do much to pardon the faults connected with a furnace.

Credit should also be given the furnace makers for being the pioneers toward modern ventilation, as from their first crude efforts and principles developed by them the present comprehensive system of ventilation sprang. But it is a sad thing to say that, despite the labor, thought and effort expended upon it, the hot air furnace of to-day comes no nearer perfect heat and ventilation (except in rare instances where it is combined with other systems) than it did when first invented, and from a building manager's standpoint the only thing that recommends it is its low first cost.

Objection to Furnaces.

The main objection to the hot air furnace by managers and owners was the old danger from fire, and improved construction has practically eliminated that; but the objection to them from the standpoint of these articles is their unhealthiness as usually erected and operated. To fully understand this the construction and operation must be explained. The fire pot or heating chamber is usually made of cast iron, with the necessary grates, ash pan, etc., varied in many ways by different makers, all with the laudable idea of economy in fuel. This fire pot is surrounded with a jacket or outside covering, leaving a space between it and the fire pot through which the air passes from an opening in or near the bottom, upward around the fire pot, where it is heated, out through openings in the top of the jacket into pipes or conduits, thence to the registers in the rooms. The original idea, which has been tried time and again with none or only partial success, was to bring the air from the outside of the house direct to the furnace, warm it and send it as pure as possible direct to the rooms, which, while very nice in theory, in practice was found in most instances to work against the law of nature and thus become an impossibility. Why? Because when air is heated it becomes lighter; also the wind will change at times and instead of blowing toward the intake will blow away from it, and change the air currents so that at times the cold air would enter the registers and the hot air pass out of the intake, but the main reason was, and is, that in but rare instances are there properly constructed exhaust vents in our buildings, to carry off the dead foul air, and as there is no fan or other pressure device, the warm air being so much lighter cannot of itself displace the heavier foul cold air and create circulation. The manufacturers, to overcome this, connected the intake to a proper sized register face set in floor of the hall or some cool place, in some cases using an auxiliary intake from outdoors, and by this means they create circulation, but in no case ventilation, as is claimed by many.

Our objections to the hot air furnace based on the grounds mentioned are: First, the dust which accumulates around and in the register pipes, and is forced out into the room by the rising of air currents, for us to breathe over and over and to cover everything in the room; second, the air in passing over the hot plates of the fire pot is baked to an extent that nearly extracts all the humidity from it, and destroys the vitality of the air.

It is this last cause, my neighbor, that causes your furniture to "squeak" and go to pieces, and you that sleep without proper ventilation to get up in the morning with that tired feeling, and dark brown taste in your mouth, spoiling your appetite for breakfast to an extent that nothing is right or tastes good, and makes your wife declare that you are "crosser than a bear," though probably if she were to tell the whole truth there was no difference between your feelings. This is also the reason you will hug a register and swear the house is cold when the thermometer shows 72 degrees, while in the spring you will take off your coat and chase around outdoors in your shirt sleeves when the thermometer only registers 65 degrees. Haven't you noticed it?

Efficiency of Water Pans.

Do not think there has not been any effort made to overcome this, for there has, and many times, and the result of this effort has been that nearly all furnaces to-day are equipped with what is known as a "water pan" in it somewhere, and when used properly they all do more or less good; but the trouble is that they are oftener neglected than taken care of, as they are so made as to call for manual attention, and the writer has never seen but one that would hold the humidity through the house to 65 degrees the normal, and that was an independent machine and could be attached to any furnace.

The writer, to determine the efficiency of these various water pans, made 168 hygrodeik tests during the winter of 1905-6 and in only three of these was the relative humidity above 60 degrees, while the average for the whole was below 40 degrees. A carbacidometer test made at the same time showed varying amounts of carbon dioxide in all but seven places, three where the humidity was normal, and four in a set of flats having the modern system of natural ventilation. In view of the above, is it any wonder that we cough, hack and are so stuffed up mornings that it takes a brisk walk or a long, cold ride to get us cleaned out and ready for the business of the day?

It will be our pleasure later on in these articles to point out to the manager, owner and tenant how in nearly all cases where they are warmed by hot air furnaces (and there is no question of the ability of a proper sized furnace without too long cellar pipes heating most any ordinary house or flat as warm as desired), they can reduce dust about 75 per cent., get perfect ventilation, the proper amount of humidity, save in fuel, increase the health and cleanliness, and all at a small money expense, a little care and trouble.

Hot water and low pressure steam heating, although not in use as long as the furnace, are gradually crowding them and stoves out of residences and small buildings, as they have in office buildings, and probably in the near future, when the automatic vacuum steam systems are better known and appreciated, it will become the almost universal heat.

While both hot water and steam are superior to a furnace as a means of heat, inasmuch that they eliminate the dust and are not a source of carbon dioxide, they are scarcely any better as regards drying up the air, and unless the building is properly ventilated, will not warm it as quick or any better than a furnace, and in fact, as erected and operated in many buildings, are a nuisance, a cause of much trouble and many colds, instead of a source of health and comfort as they should and would be if the subject of ventilation was understood and enforced by the managers and owners of the buildings.

Many people go to the extra expense of installing hot water systems with the idea that they are more economical in fuel and that they will furnish more moisture to the room than low pressure steam; while repeated tests with a hygrodeik show that hot water heat furnishes only a degree or so more humidity than a hot air furnace, and no more than low pressure steam; in fact, as commonly erected, with compression or poor automatic air valves, which allow a small leak of steam in the room, the steam heat shows several degrees more relative humidity than hot water. Of course where the above conditions exist, it shows an imperfect job, and while it raises the humidity, it is an unnecessary drag on the coal pile. While it may be a little out of place in these articles, it may be interesting and perhaps instructive to some to know the relative economy in fuel of the various systems of heating residences and buildings (not offices or buildings heated from power or central plants), compiled from tests made by various heating engineers. Using 100 as a basis, they run about as follows: Automatic vacuum steam, 100 per cent.; hot water (mild weather), 85 per cent.; low pressure steam, 75 per cent.; hot water (severe weather), 70 per cent.; hot air furnace, 60 per cent.; stoves, 45 per cent.

We shall endeavor to show later on how by ventilation, and some few changes, most any hot water or low pressure steam system now in use can be made to give satisfaction to the tenants, and be made a more healthy and economical source of heat.

A practical as well as easy test of the draft of a chimney, although naturally not an exact one, is to burn some paper in the bottom of the chimney flue. If the smoke is drawn upward in the flue and then finally the charred remains of the paper are sucked up into it there is pretty fair indication that the draft is sufficiently good to serve satisfactorily a properly designed heating apparatus. If there is a suspicion that there is a chance for considerable inleakage of outside air into the chimney flue, it is possible that the paper burning test should be continued long enough to see if the suction effect of the chimney flue will bring in air enough through the crevices in the masonry work to interfere finally with the proper withdrawal of the smoke.

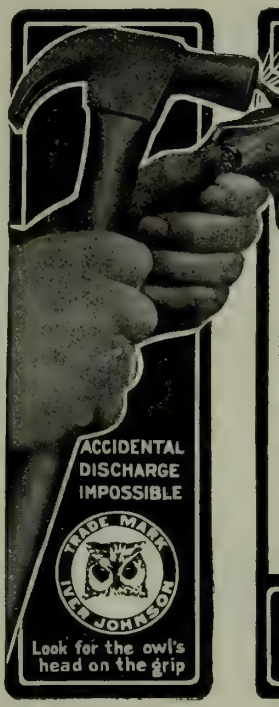
THE WANT AD.



The want ad. has grown from a little used force in business life, into one of the great necessities of the present day.

Business men nowadays turn to the "want ad." as a matter of course for a hundred small services.

The want ad. gets work for workers and workers for work.

It gets clerks for employers and finds employers for clerks. It brings together buyer and seller, and enables them to do business, though they may be thousands of miles apart.

The "want ad." is the great force in the small affairs and incidents of daily life.

Hammer the Hammer

The Iver Johnson Safety Automatic Revolver won't go off unless you deliberately pull the trigger. Do that and you'll find it just as sure as it is safe. The straightest-shooting, hardest-hitting, most reliable revolver made to-day. Rightly proportioned, beautifully finished; a gentleman's pistol for pocket, desk or bureau.

The Iver Johnson goods are never given away as premiums. They are always sold in the regular channels. We advertise them in the big magazines and sportsmen's periodicals, but never sell one by mail where there is a dealer to supply it. And we stand back of the dealer with a guarantee. Be sure to find the owl's head on the grip and our name on the handle.

Send for Dealer's Catalogue or order of your jobber.

BUILDING AND INDUSTRIAL NEWS

For additional items see the correspondence pages. Information is solicited regarding building and industrial news, the incorporation of companies, establishment or enlargement of mills, factories or foundries, municipal water works and sewerage systems, railway or mining news, etc.

Industrial Development.

The Dominion Government engineer has approved of the plans of the City of St. Boniface, to erect a bridge of concrete and masonry work at a cost of $80,000.

The British Columbia Electric Railway Company, New Westminster, is calling for tenders for the erection of a large addition to the car shops which will double the capacity of the works.

The John Inglis Co., Toronto, have been awarded the contract for the new 15 000,000 gallon pumping engine at a cost of $147,530 and also the contract for a 6000,000 gallon engine at a cost of $52,700 to be installed at the Toronto waterworks plant.

The Nova Scotia Steel and Coal Co. have reported a new vein of iron ore at Whycocomagh Bay which is said to assay about forty-nine per cent. The company intend to build a tramway to enable them to ship the ore to their plant at Sydney Mines.

The Ontario Powder Company, of Kingston, is to build its permanent works at Stoney Point, a quarter of a mile further away from Tweed, and will so buttress or barricade the plant as will not only ensure every means of safety in the works, but prevent a recurrence of loss or damage in the village.

Two thousand barrels of cement were dumped into the harbor at Vancouver last week as the result of worm-eaten piling on the wharf where the shipment was stored. The City of Vancouver owns the wharf and Bostock & Abbot were the lessees. The accident involves a loss of about $10,000 and the lessees are trying to fix the blame for the loss on the city.

Railway Construction.

A contract for the laying of about 100 miles of track for the G.T.P. from Prince Rupert through the Rocky Mountains will be let in the near future at an approximate cost of $8,500,000.

Phelan & Shirley, an American firm, have received a contract for grading a forty mile section of the G.T.P. at Clover Bar, near Edmonton. This firm expect to have 400 teams on the work in the near future.

An important advance in the construction of the National Transcontinental Railway was made last week when a gang of men were started to work taking soundings along the Red River, Winnipeg, preparatory to construction of the new bridge across the river to St. Boniface to connect Winnipeg with the Fort William section of their line.

The contract for the construction of the last forty miles of the T. & N. O. extension, commencing about one hundred miles north of New Liskeard, will it is understood, be taken out of the hands of the contractors, McCrae, Chandler & McNeil, by the commission. The contractors have encountered continuous wet weather and trouble in securing labor.

At the present time about 6,000 workmen are employed on G.T.P. construction work. The company have a stretch of 800 miles of road lying between Winnipeg and Edmonton which is supposed to be practically level. In the construction to make this feat possible hills have been cut through and trestles, some of which are a mile in length, have been built. The main line of the G.T.P. betweem Winnipeg and Quebec will be 200 miles north of Fort William.

Building Notes.

Presbyterians at Fort William will build a new church this year.

W. L. Tait, Vancouver, will erect an apartment house at that place to cost $25,000.

A new public school will be erected at Lethbridge, the cost of which will be $85,000.

Building permits to the value of $70,000 were issued at Vancouver during February.

Six new rooms will be added to the Harbord street Collegiate, Toronto, this year, at a cost of $60,000.

Toronto architects and engineers contemplate the erection of a club house and office building to cost $500,000.

The Canada Life Assurance Co. will erect a handsome brick building in Vancouver this year, at a cost of $250,000.

A syndicate composed of Toronto men is being formed to erect an apartment house on Carlton street to cost $100,000.

The Regina Flour Mills Co. will rebuild their plant at Regina this spring. The plant was totally destroyed by fire a short time ago.

An addition will be added to the Y. M.C.A. at North Sydney, C.B., this year. The present intention is to build boat houses and a 40x50-foot gymnasium.

Tenders will be called shortly for the addition of an extra storey to the Guelph armory, to cost about $50,000, thus raising the price of the building to $175,000.

A church and Sunday School will be erected by the Anglican church at Winnipeg during 1908-09, at a probable expenditure of $125,000. The proposed edifice provides for classrooms and a first-class gymnasium.

Improvements and extensions to the Halifax post office will be made this year at a cost of between $50,000 and $100,000. The plans for the new building have been forwarded from Ottawa and tenders are being advertised for.

A deal for the purchase of a site for Montreal's new technical school is about closed. The Quebec Government is covering the $200,000 issue of bonds required for construction and maintenance, and the civic authorities of the city will pay $15,000 per year towards maintenance.

Companies Incorporated.

The Ontario Limestone and Clay Co., Ltd., has been incorporated with head office at Belleville, to manufacture and sell all kinds of products made from limestone and clay. The new company has a capital stock of $50,000 and the provisional directors are F. R. Lingham, Mary A. Lingham, L. E. Allen, and J. W. Walker, all of Belleville.

The E. R. Burns Saw Company, Limited, has been incorporated with a capital stock of $50,000, to do business as manufacturers of saws and general hardware. The head office of the company will be at Toronto and the provisional directors named are A. W. Holmsted, F. H. Potts, A. R. Bickerstaff, T. A. Silverthorn and Edith M. Carruthers, all of Toronto.

The Toronto Fireproofing and Concrete Co., Limited, has been incorporated, to deal in cement, brick, tiles and general building supplies and to contract for the erecting of private and public works. The new company has a capital stock of $40,000 and the head office will be at Toronto. The provisional directors named are W. E. Denise, J. A. Jackson and J. P. Holden, all of Toronto.

The Peerless Motor Specialty Company, Limited, has been incorporated with head office in Ottawa, to manufacture hardware and castings, electrical appliances and railway supplies. The new company has purchased a number of important patent rights from B. H. Sills and John Lumsden relating to articles the company will manufacture. The company is capitalized at $40,000 and the provisional directors named are B. H. Sills, John Lumsden and J. I. McCracken, all of Ottawa.

SWEDISH IRON.

Thirty years ago all the iron that was worth anything for fine tools, guns, etc., came from Sweden, and was very expensive, so it is not to be wondered at that, we are told, the village blacksmith saved all the "Swedes" iron horseshoe nails which he drew from the feet of the steeds of that time. These nails were generally thrown in a corner until from 50 to 100 pounds had accumulated and then they were sold to any one who cared to pay from three to four cents a pound for them.

The purchaser was oft times a manufacturer, in a small way, of shotguns. He took the nails, or paid the blacksmith to do so, and after making a three or four-inch ring of Swedes iron from a piece of the bar stock, filled this with the old nails standing on their heads. Two such rings full of nails were then placed one on the other, points together, and the whole thing put on the anvil A few blows of the sledge-hammer sufficed to make an almost solid mass. This was placed in the fire and brought to a welding heat and then hammered and heated again until there could be no doubt as to its being "one." Next it was drawn out into strips about one inch by one-eighth and any convenient length. These the gun-maker welded around his mandril, producing the famous twist barrels so common in Europe.

News of the Paint Trade

REQUISITES OF A GOOD PAINT.

There are certain points which should always be looked for in a good paint no matter for what purpose the paint is intended, and they are these :

(1) That it shall adhere firmly to the surface over which it is spread, and not chip or peel off. It must be non-corrosive to the material it is used to protect, as well as to itself under long periods of atmospheric exposure and chemical changes. It must form a surface hard enough to resist frictional influences, yet elastic enough to conform to all changes of temperature, or with a co-efficient of elasticity approximately as near the material it covers as possible. It must be impervious to, and unaffected by, moisture and atmospheric and other influences to which the structure may be exposed.

(2) That it shall work properly during its application, a property that depends largely upon the relative amounts of pigment and liquid; the nature of both pigment and liquid also having influences that govern results.

(3) That it shall dry with sufficient rapidity. This function depends mostly upon the vehicle or liquid used with the pigment, though the pigment has in many cases an influence.

(4) That it shall have proper durability, which is a function both of the pigment and liquid. And as the question of cost is in many cases the governing factor in the selection of a paint, the question of durability may be regarded as the most important one of the list, thought it can be imagined that a paint can be durable per se, and not be protective in the strict sense of the word, as can be illustrated in the case of a good paint applied to the surface of a sheet of iron coated with rust. The liquid element in the paint will not absorb or neutralize the corrosion which it covers, but will dry regardless of it, and permit the destruction of metal to progress beneath its coat.

(5) Covering power, by which is meant the power of a pigment to so cover the surface to which it may be applied that its protection from decay is not assured, but that the minimum amount of paint shall effect this purpose.

PREPARATION OF ENAMELS.

Enamels placed on copper and brass tubing have shown that objectionable deposits are not only less in such cases owing to the smoother exposed surface, but that such deposits as are unavoidably precipitated by boiling water are more easily removed than from unprotected, rough or oxidized surfaces of steam and conduit pipes. The surfaces to be enameled are first thoroughly cleansed by the removal of adhering particles by means preferably of sulphuric acid used in proportions of 1 of acid to 20 or 22 of water, and repeatedly flushed with the solution and cleansed with rotary cylindrical brushes of steel wire and stiff bristles. The laying on of the coating of enamel is done by means of softer brushes, slightly less in size than the inner circumference of the tubing to be glazed. The enamel is thoroughly dried and allowed to set, and then placed in a muffle of suitable length in such a way that the tubes are readily turnable with tongs grasping the exterior of the tubes.

The ground enamel is so composed as to require a higher temperature than the second layer of enamel, and repeated turning of the tubes, to effect an equal distribution of the coating, is necessary. Especially is this the case in laying on the second coating, so that the mass shall not leave bare spots.

The following formulae will show the correct proportions to use for the first and second coats : First coating—Silica 34, borax 15, soda 2. Second coating—Feldspar 34, silica 19, borax 24, oxide of tin 16, flour spar 4, soda 9, nitre 3.

A FEW—

LONDON, ONTARIO

Paint and Oil Markets

TORONTO.

Toronto, March 4.—Conditions show an improvement since last week in several departments. Price cutting has ceased and stocks are larger than for some time. A demand for paints, stains and varnishes for interior use is beginning to come in as spring approaches, and in the ordinary lines booking continues to be satisfactory. The heavy condition of country roads is still blamed for the lack of trade, but with favorable weather conditions the outlook continues to brighten. Ontario is still ahead of the western provinces regarding booked orders.

Turpentine—The situation at the chief source of supply continues interesting. During the week several revisions have been reported from this source but prices at Toronto have not been affected. Stocks continue unsatisfactory owing to the extreme slowness of shipments. Booking for spring delivery is much stronger this week. We quote single barrels 75c, one to four barrels 74c, less than barrels add 5c per gallon.

Linseed Oil—The reduction quoted last week has not been followed generally and the ruling price is again 60 cents. Stocks in Toronto are still low and shipments are arriving but slowly. We quote single barrels 60c, 2 to 3 barrels 59c, 4 to 9 barrels 58c. Add 3c to this price for boiled oil. Shipments f. o. b. Toronto, Hamilton, London, Guelph and Montreal. Terms, net 30 days.

White Lead—Prices remain firm and booking continues to improve. Stocks are in a fairly favorable condition at present and quotations are as follows: Pure (government seal) $6.25; No. 1, $6.

Red Lead—Prices have declined ¼c since last writing owing to the weakness of the metal base and by-products. Some good orders for spring delivery are coming to hand and generally the situation shows an improvement. Revised quotations are: Genuine in 100 lb. kegs, $5.75; genuine, in 560 lb. casks, $5.25; No. 1, $5.

Petroleum—The demand continues steady throughout the country and no changes of prices have occurred since last writing. Quotations remain: Pratt's astral 17½c, water white 15c, and prime white 13½c.

Glass and Putty—The demand for glass has opened up and orders for spring delivery are coming to hand. Putty is firm and orders for future delivery are satisfactory. Prices of putty remain: Bladders $1.95 per 100 lbs., less than barrels $2.10 per 100 lbs.

Shellac—Owing to the large number of grades on the market at the present time the price is varied but firm. A good business in futures is coming to hand at present. We quote pure white in 5 gallon lots $2.25 to $2.50, pure orange $2 to $2.15, and No. 1 orange $1.90.

Varnish—Demand is slow and quotations firm, No. 1 furniture in barrels 65c, elastic oak in barrels $1.25, light hard oak in barrels $1.05.

MONTREAL.

Montreal, March 6.—With better business conditions existing in Ontario, where stocks seem to have become attenuated, the situation among the larger manufacturers here has materially strengthened. While no rush orders have been received some very encouraging inquiries for this month and April are reported, and it is thought that the spring trade will open out fairly well.

Turpentine—It is reported that the supply in the South is getting into a few hands, and the quantity at the shipping points being rapidly reduced, local holders are holding tight to their supplies. Quotations may be advanced at any moment. For the present we quote: Single barrels, 75c; wood distilled turpentine, pure, 69c.

Linseed Oil—Several of the oil crushers with a view to encourage early spring shipments have shown a tendency to shade their figures, the jobbers have anticipated this, and orders are being filled at 1c per gallon less than that which prevailed a few days ago. We, therefore, quote: Raw, 1 to 4 barrels, 56c; 5 to 9 barrels, 55c; boiled, 1 to 4 barrels, 59c; 5 to 9 58c.

Ground White Lead—This article is now forming the base of all heavy shipments from the manufacturers, and the call seems at present to be pretty nearly, if not quite, up to that of average seasons. We continue to quote: Government standard, $6; No. 1, $5.75.

Red Lead—Several large lots have come in recently, and with these better supplies the market is slightly easier, and figures have been marked down 25c per 100 lbs.: Genuine red lead, in casks, $5.50; in 100-lb. kegs, $5.75; in less quantities at $6.50 per 100 lbs.; No. 1 red lead, casks, $5.25; kegs, $5.50, and smaller quantities, $6.25.

Dry White Zinc—This article is extremely sluggish, and no change is looked for in the immediate future. We quote: V.M. Red Seal 7½c; Red Seal, 7c; French V.M., 6c; Lehigh, 5c.

White Zinc Ground in Oil—Only small orders have been received, and the figures are nominally the same. We quote: Pure, 8½c No. 1, 7c; No. 2, 5¾c.

Varnishes—Shellacs are meeting with encouraging demand, and the trade is not only brisk but almost equal to last spring shipments. The ordinary lines of japans and varnishes are still on the quiet side. Inquiries may be said to be fairly numerous, but lack very great weight.

Putty—The call may be said to be of

Important to Dealers

The Brands and Trade Marks of

Brandram's B. B. White Lead

are familiar to painters and house owners all over Great Britain and the Colonies, and our advertising of these Brands and Trade Marks in Canada will make them even more familiar to the rising generation of painters and house owners.

are of the highest quality and although well known will be more advertised than ever the coming year.

BRANDRAM-HENDERSON, LIMITED

CORRODERS and GRINDERS

Montreal Halifax
St. John Winnipeg

LUCAS GENUINE IMPERIAL FRENCH GREEN

presents a striking contrast when placed in comparison with any other green that has ever been produced. It will not fade or turn dark. For this reason a surface which has been covered with Lucas Imperial French Green will present as attractive an appearance, ordinary wear and tear excepted, in two or three years as it does the day it is put on.

Because of its superior covering capacity it is more economical for property owners, and because of its easy application more profitable for painters than any other green made.

In the last few years there has been an effort on the part of a few paint producers to imitate

LUCAS GENUINE IMPERIAL FRENCH GREEN

We believe they have succeeded in fooling very few persons, although the label resembles in its general appearance the Lucas label.

We desire, however, to advise our patrons and friends once more that the effort to FOOL and DEFRAUD buyers of paint is being continued, and to suggest that the great body of honorable painters and dealers throughout Canada guard against this despicable kind of fraud.

a hand to mouth character, and without feature. We continue to quote: Pure linseed oil putty, bulk, 800-lb. casks, $1.75; in 25-lb. iron drums, $2.05; in 25-lb. tins (3 in a case) $2.15; bladder putty, in barrels, $1.95.

PAINTS FOR METAL ROOFS.

In a majority of instances paint dealers throughout the country sell most of the paint intended for wood surfaces from $1.50 to $1.75 per gallon. Yet, when it comes to paint for metal roofs the prevailing condition seems to be that the dealer cannot sell a paint for this class of work for more than $1 to $1.25 per gallon. Why ? Because people who practice false economy believe "if the paint on the visible exterior of the house, which is expected to look pleasing to the eye, cost a certain price, paint that is put up on the roof, which is not necessary to look pleasing to the eye, should not cost half that price." Therefore, the price that controls the quality of paint on the market for metal roofs which are sold by the dealer is, unfortunately, kept down by popular demand.

Another reason for a vast amount of cheap trash on the market for metal protection and called paint is the fact that the painter or tinner applies a cheap quality so that his own temporary profits may be thus gained. Painters and tinners invariably are asked by their customers for prices "per square" for doing the job (details of quality and materials omitted), and in order to secure the work they are tempted to make a price consistent with their chances of a successful issue. As a rule, the tinner does not care much whether the paint he puts on wears one or five years. It makes no material difference to him. It may present a good appearance for a few months after it is applied, and be almost entirely washed off in a year or so afterward.

There are many paints that will wear well for a period of from five to ten years on sheet metal exposed to the weather, and also on bridges, but the manufacturers of these are compelled very often to give a very close bid in order to get a contract and are compelled to use cheap material ; in fact, they have often made the statement to those who attempted to sell them high-grade paint that "our customers will not pay us any more for our material with high-grade paint than if it was coated with the cheapest that could be obtained."

PAINT MANUFACTURER DEAD.

James C. McArthur, of the firm of McArthur, Corneille & Co., manufacturers of paints, oils and varnish, Montreal, one of the prominent business men of the city, and a member of the Board of Trade, died suddenly at his residence from heart trouble, at the age of 66.

Mr. McArthur was born in Belfast, but located at Montreal when very young. The business was established by John McArthur, father of the deceased, and the late Alex. Ramsay, who were in partnership for a time on Victoria Square. Ultimately the firm was dissolved, each member setting up in business for himself, and John McArthur taking his son into partnership. Later Mr. Corneille came into the firm, but for the last six or seven years Mr. McArthur was the sole proprietor. The deceased was unmarried, but leaves three married sisters.

The funeral service was largely attended. After a short service for the relatives at the house, the formal burial service was held in the Church of the Messiah, where the pastor, Rev. W. S. Barnes, in giving a message of condolence to the relatives and friends remarked that the death of Mr. McArthur would be deeply felt, not only by the family, but by the community of which he was an honorable member, and by a great many citizens who had been associated with him in various ways, and had learned to admire him for his uprightness and integrity. The interment took place at Mount Royal Cemetery.

THE LATE JAMES C. McARTHUR.

OTTAWA PAINT WORKS BURNED.

The premises of the Ottawa Paint Works, on Bank Street, Ottawa, were completely gutted by fire on February 28. The loss of stock is estimated at $15,000, and the building was damaged to the extent of $4,000. The loss is covered by insurance. The proprietors of the factory are J. M. Young and T. C. Hickman, while Dr. W. C. Cousens owned the building. The fire was started by explosion of gas when a match was lighting a jet. The inflammable oils around quickly caught fire and an explosion followed that broke all the windows and helped to spread the flames. An alarm was turned in promptly, but when the firemen arrived the flames had spread over the entire building. The firemen managed to confine the fire to the factory.

J. M. Young stated that the business of the company would not suffer seriously, as a result of the fire, and that all orders would be filled. The company contemplated erecting a large plant this year.

¶ It is not policy to keep harping upon the one string. Changes are frequently beneficial—old style shades of Window Blind and Shutter Greens are being supplanted by the Veronica.

¶ The Veronica is a smooth, rich green, with great covering properties. It is very durable, and is especially manufactured for Window Blinds, Shutters, Verandahs, Screen Doors, Garden Ornaments, and all kinds of Wood and Metal Work.

¶ To avoid disappointment and to distinguish it from a host of so-called Window Blind Greens, the word "Veronica" has been registered as a Trade Mark with the Department at Ottawa. Full particulars may be obtained from our Travellers or from the 1908 Catalogue.

Mistakes and Neglected Opportunities

MATERIALLY REDUCE THE PROFITS OF EVERY BUSINESS

Mistakes are sometimes excusable but there is no reason why you should not handle Paterson's Wire Edged Ready Roofing, Building Papers and Roofing Felts. A consumer who has once used Paterson's "Red Star" "Anchor" and "O.K." Brands won't take any other kind without a lot of coaxing, and that means loss of time and popularity to you.

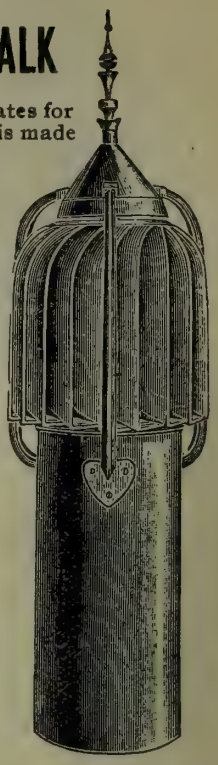
If there is one thing we like more than the other it is to explain just why

McDOUGALL PUMPS

are Standard Pumps the world over.



It is simple when done, as quality, first, last and all the time, with prices right is a combination hard to beat.

OUR CATALOGUE EXPLAINS.

The R. McDOUGALL CO.

Galt, Canada LIMITED

A COMMON SENSE TALK

AIR IS CHEAP. You do not pay rates for air like you do for water, yet a big fuss is made over the impurity of water and very often no thought is taken of the impurity of the air breathed from day to day and night to night.

Crowded rooms, whether in public places, schools, opera houses or factories, require ventilation as well as the private dwellings.

HOUSE BUILDING IS A SCIENCE NOWADAYS AND NO BUILDING IS COMPLETE WITHOUT ONE OF OUR AEOLIAN VENTILATORS.

THE VENTILATOR ITSELF IS AN ORNAMENT and can be made to suit the character of the building either as to size or as to quality of material.

Ottawa University,
Ottawa, May 30th, 1901.
Messrs. J. W. Harris Co., Limited, Montreal.
Dear Sirs;—Your "Aeolian" Ventilators placed on our University three years since have given us entire satisfaction, BROTHER NORMAND

Dealers everywhere will find a double profit in handling this ventilator. Write direct for catalogue and booklet to-day.

Learn about our system of ventilating. A pleasure to send books.

The J. W. HARRIS CO., Limited

General Contractors and Manufacturers

MONTREAL

PROTECTION and SECURITY

For the Dealer Protection, For the Purchaser Security.

This is our 1908 program. Our Dealers in 1907 secured their choice of the Largest and Best Business. We do not worry about where they stand, but we fear that some Good Merchants do not know what great assistance we can and do give our friends. We are the Originators of the Protection Plan. Because it is a success, we of course have many imitators, but our Goods and Methods cannot be duplicated.

There will be much farm building done in 1908, by present indications. Get in line to look after your share. The best and surest way is to get in touch with us. A post card will do it.

"Sure-Grip" Shingles and "Galt" Corrugated Sheets combined with Galt Salesmen and Galt Methods will work wonders.

THE GALT ART METAL CO.
LIMITED
GALT, - ONTARIO

The White Mop Wringer

This Trade Mark

Guarantees Satisfaction.

Properly displayed to your customers will

Increase Your Profits

A stand like this will be sent with wringers, at your request.

Remember—The "White" wrings to satisfy the most critical housekeeper, maid or janitor.

Catalog for the asking.

Made in Canada.

Order direct or of your jobber.

The White Mop Wringer Co.,

Fultonville, New York

When a Customer Comes

into your store to buy an axe handle, he wants one that will stand the test of hard usage. Our

Empire, Imperial and Peerless Axe Handles

will stand any amount of hard usage, because they are made of the best hickory that can be bought.

You will bring trade to your store by selling them.

Write for price list and discounts.

J. H. Still Manufacturing Co. Limited

ST. THOMAS, ONTARIO

The Long and the Short of It

"IT" MEANS

THE "LONG"

is the time it wears. It stands the test of heat and frost, wind and rain, and gives your customers many years of solid satisfaction.

THE "SHORT"

part is the time needed to put it on. A great deal of time—which means a great deal of money—is saved to the man who uses

SHIELD BRAND

LOCKERBY & McCOMB
65 SHANNON STREET
MONTREAL

We Can Really Help You

to get the business of your neighborhood in Sheet Metal Building Goods. We have organized for 1908 the biggest campaign of co-operation with the dealers that we have ever planned. It cannot help being profitable to our agents.

WRITE FOR OUR PROPOSITION

If you are not already actively selling our line sit right down at your desk and send us a post card. You will hear of our proposition by return mail. Don't delay! Your competitor might get in ahead of you.

"WE WORK WITH THE TRADE"

J. A. Bernard, QUEBEC
Clare & Brockest, WINNIPEG
Ellis & Grogan, CALGARY
Wm. N. O'Neill & Co., VANCOUVER

"Brantford" "Roofing"

Get FREE SAMPLES of our roofing and see for yourself what a strong, durable, pliable and altogether superior roofing it is. Two finishes—Asphalt and Rubber. Sold at as low a price as a really good roofing can be sold—about one-third less than metal. Get a step ahead of your competitor by securing the agency for your town.

Brantford Roofing Co. Limited

Brantford, Canada

Montreal Agent; Chas. A. Sullivan.
Winnipeg Agents; General Supply Co., of Canada, Limited.

Steel Fishing Rods

Fly Casting Rods
Bait Casting Rods
Trolling Rods
Salt Water Rods
Muscalonge Rods
Tarpon Rods
Truck Rods

Is your line full? There is a special "BRISTOL" Rod for each kind of fishing. Progressive dealers cultivate the trade of the man who takes pride in owning a dozen different rods as well as the trade of the man who uses one rod for all kinds of fishing. Is your line complete? Better order quickly if it isn't.

The returns from our magazine advertising show that the season is now in full blast.

The Horton Mfg Co., Bristol, Conn., U.S.A.

Something You Ought to Be Selling

The New Century method of washing has succeeded, not because of its ease, speed and simplicity only, but because it gives better results than are possible with any other method.

This machine has a wringer stand too, not a rickety affair, but a convenient, strong, rigid attachment, always in position, never in the way.

New Century Style "B"

The experience is in the machine. You'll hear no complaints of it and have no excuses to make.

They are the best there is.

Dealers, don't load up with experiments, it is a losing game

BEVELLED PLATES

For doors it is hard to get anything more ornamental than clear Plate Glass. Its brilliancy distinguishes it from all other glasses. Bevelling, while inexpensive, adds greatly to the effect, and should never be omitted from a door plate. It can be further ornamented by mitre cut work as in illustration. This gives absolutely the best and most unique effect known to the glass trade.

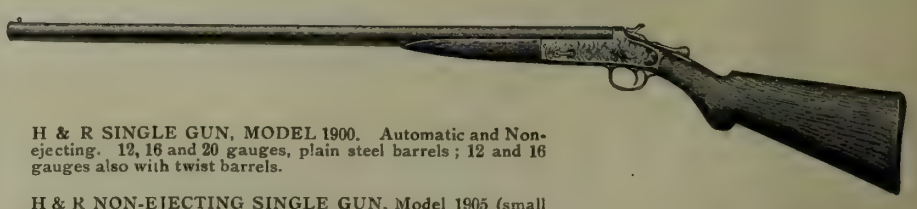
H&R
GUNS AND REVOLVERS

are profitable articles for you to handle, Mr. Dealer, because of the extensive advertising and the absolute satisfaction they have given to discriminating purchasers for over thirty-five years.

We are constantly impressing upon the mind of the public—your customers—the superiority of H & R Guns and Revolvers—the simplicity of construction, accurate and reliable shooting qualities, perfect balance and beautiful finish.

Our catalogue tells about our full line and gives valuable selling points.



WRITE FOR IT.

Here is the New Target Grip

The realization of a long-felt want. Light, compact, durable—the first combination of a medium-priced revolver with a perfect full grip. The extension hard rubber stock affords a perfect grip. It is fitted to the frame, and by having the regular stocks (furnished extra) can be interchanged for pocket use.

Our new grip prevents slipping and twisting, insures a positively secure hold, because it fits the hand naturally, insuring confidence, which means a steadier aim and greater accuracy in shooting.

H & R SINGLE GUN, MODEL 1900. Automatic and Non-ejecting. 12, 16 and 20 gauges, plain steel barrels; 12 and 16 gauges also with twist barrels.

H & R NON-EJECTING SINGLE GUN, Model 1905 (small frame). 28 gauge, 44 and 45 calibers, plain steel barrels.

PROTECTION and SECURITY

For the Dealer Protection, For the Purchaser Security.

This is our 1908 program. Our Dealers in 1907 secured their choice of the Largest and Best Business. We do not worry about where they stand, but we fear that some Good Merchants do not know what great assistance we can and do give our friends. We are the Originators of the Protection Plan. Because it is a success, we of course have many imitators, but our Goods and Methods cannot be duplicated.

There will be much farm building done in 1908, by present indications. Get in line to look after your share. The best and surest way is to get in touch with us. A post card will do it.

"Sure-Grip" Shingles and "Galt" Corrugated Sheets combined with Galt Salesmen and Galt Methods will work wonders.

Cut 10—Outdoor Cabinet

Keep Your Gasolene Outdoors

STORE IT IN A BOWSER OUTDOOR CABINET

The Bowser will keep your property absolutely safe from gasolene fires and explosions because it keeps explosive gases from forming.

It will increase your profit on gasolene because it stops the usual loss of from 15 to 50 per cent. through evaporation, leakage and waste. It draws new trade because it is placed in front of the store where it continually advertises the fact to automobilists and others that you sell gasolene.

The Bowser costs you nothing because it pays for itself by its own saving of gasolene. Ask us to send Gasolene Catalog V. It's free.

It Saves Lives

A Building Necessity

These are the names that have been made synonymous with the

AEOLIAN VENTILATOR

We are the manufacturers of it and control the patents.

We have placed it on some of the finest buildings in the Dominion.

It is a scientific fact that no modern building can afford to neglect sanitation.

We are contractors and sanitary experts. Our ventilator is guaranteed and is placed in position to suit the building as to quality and size.

One Testimony:

Montreal, June 12th, 1903
Canadian Pacific Railway Company.
Messrs. J. W. Harris Co., Limited.
7 St. Elizabeth St , Montreal, Que.

Gentlemen,—Answering yours of June 1st, I am not personally familiar with the merits of the "Aeolian" Ventilators but our Assistant Engineer, Mr. F. Crossley, reports that the Ventilators of this type manufactured by you and used by this Company at the Place Viger Hotel, Chateau Frontenac, Windsor Street Station and elsewhere, have proved satisfactory. Yours truly,
E. H. McHENRY, Chief Engineer.

A Good Proposition for Any Dealer

Don't Scatter Your Shot

A dollar saved is a dollar earned. If we can show you a saving in your stock of from $100 00 to $5,000.00 it is like giving you that much more money to invest—without interest—as you convert your stock into cash.

How many lines of Ammunition do you carry? A little of this, a little of that, and of course, to meet the demand, probably a full range of Dominion Ammunition, which supplies a load for every modern firearm—Rifle, Pistol or Shot Gun—and gives your customers a warranted and superior article.

Have you ever figured up the amount tied up in other kinds? Those you keep on hand for a chance buyer? Have you figured that, turned into cash, this amount would allow you more purchasing power in other and perhaps more profitable lines?

Our sales-manager will gladly go into this matter with any retailer or jobber, and show how it can be done.

Retail Hardware Association News

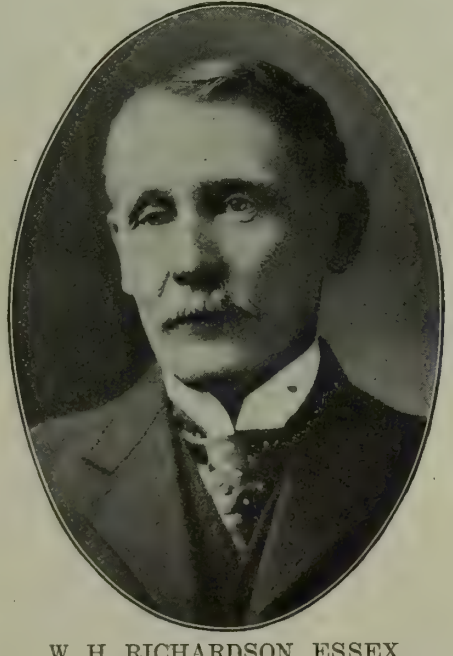
Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding Association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

DOES UNDERHAND COMPETITION PAY.

Competitors in business generally misunderstand each other, and nearly always each is ready to attribute unholy methods to the other fellow without thoughtful consideration or investigation of any kind. It is wiser for the merchant to work in harmony with his competitors, agreeing to sell certain goods at a common price, or persevere in the old practice of underselling competitors and thus seek to win trade by the power of lower prices? Thoughtful people must know that a merchant cannot sell goods at cost, except such merchandise as shop-worn articles, passed styles and finishes, and goods purchased under abnormal conditions from overloaded factories and the like.

A checker player frequently gives away one man to an opponent in order to win two or three by the new position he has gained. And everybody must understand that merchants frequently sell staple articles at cost in order to sell many other articles at a profit, One buying an article of which he knows the value recognizes a bargain when he sees it. But the average customer doesn't know values and must depend on the storekeeper to give him what he wants.

Storekeepers are closer to the people than any other class of men, and they run their stores to meet the requirements of their customers—in other words, they are what their customers force them to be. It may be said that law "caveat emptor"—the buyer takes the risk—still obtains, and people should know good goods from poor ones. It may be that people should know values, but it is certain that people do not. We read of great bankers and railroad owners paying fortunes for imitations of ancient art, and the best of men do not know values outside of their own particular fields of endeavor.



Honest, fair competition really is not competition at all—but legitimate business. The great trouble is that we have come to misunderstand the word competition and confuse it with throat-cutting. Competition has become throat-cutting and that is not the life but death of trade.

Price agreements—if not carried to criminal ends, are fair and just to all. It is claimed that one of the chiefest reasons for commercial failure throughout the country, is the lack of merchandising ability. Merchants may buy right but it is another thing to sell right. Many merchants figure their percentages too low to enable them to cover all the expenses of their business, they allow nothing for their own labor, nor do they count on taxes, depreciation, wear and tear on building and fixtures, heating, stationery and scores of little things that in the aggregate make a fair burden of expense that is not considered in price-making.

Another thing that the merchant frequently neglects is the matter of getting profit sufficient to cover the losses on left-overs or shop-worn goods. It would be well to avoid this loss and there is only one way in the world to do it. Moreover, in this day, it is easy to abide by the rule. Buy frequently and in small quantities. In this way fresh goods, new and attractive goods are always on display and they will certainly increase your business. Moreover, they will help you to get your profit.

TWENTY-SEVEN YEARS' RECORD.

The percentage of hardware merchants who have a record of upwards of a quarter of a century in business in one town is not very large, although hardwaremen are by nature a conservative and stable set of men. Death and misfortune, however, account for many changes. The dealer who succeeds and builds up a business with a record of two or three decades must have used intelligent business methods and deserved a reputation for worth and integrity in his community.

W. H. RICHARDSON, ESSEX.

One of the New Members of the Executive Committee of the Ontario Retail Hardware Association.

W. H. Richardson, Essex, Ont., started in 1881 to build a business for himself, and the result of 27 years' work is a large hardware, stove, furniture and farm implement trade, which stands high in the esteem of those who know the trade in western Ontario.

At the recent convention of the Ontario Retail Hardware and Stove Dealers' Association Mr. Richardson was honored with election to the executive committee by the delegates, aad those who have not met him can, by a study of the kindly but firm features shown in the accompanying picture, realize that in Mr. Richardson the retail organization has gained a valuable executive officer.

NEWSPAPERS ON HOME BUYING.

The fact that much can be done to educate the people on the folly of sending their money to the city catalogue houses is being recognized by some of the more progressive of the newspaper proprietors in many of the smaller towns in the country. The editor of the Burk's Falls Arrow is one of these, and in a recent issue some pointed arguments against the practice of too many persons to send their money out of town when as good or better value could be obtained at home. Such a course will, no doubt, be appreciated by the local merchants, and readers should clip the eight arguments published below from the Arrow and take them to their local editors, who cannot refuse to publish them.

As soon as local papers realize more deeply that their best friends are the local merchants, they will publish more of this sort of matter. Apart from its being in their own interest to do this, it is also very much in the interest of the public. The public must be taught that it is really cheaper to buy at home. When they grasp this fact, they will start in to build up their own business community in a way that will presently astonish them. These are the eight reasons given by the Arrow, why the local merchants should be patronized:

1. It takes money out of circulation where it is most needed.

2. It injures local business industries and that injures you, no matter what your occupation may be.

3. It helps to build up other places at your expense.

4. The mail order houses do not help you to pay taxes or furnish you with a market for your produce.

5. If you are sick or out of work the mail order houses will not accept promises to pay until conditions change. "No cash, no goods" is their motto.

6. It is always sound business policy to spend your money where you make it.

7. It is pretty small potatoes to send your spare cash to the mail order houses and run up long-winded accounts with local dealers.

8. It does not pay, because you can do as well or better at home.

TERROR TO EVIL-DOERS.

"Don't put my account in the lawyer's hands. I'll be in ——— in a few days and pay ——— account," wrote a Hamilton lady to the association secretary a few days ago.

"If we land Miss ——— money we will consider ourselves very fortunate. The collection department, evidently, is a terror to evil-doers," writes the firm which is following up the lady delinquent.

Any member of the association can use the collection department service at an expenditure of only one dollar.

Help Yourself by Helping the Farmer

A Suggestion for Building Up Canadian Retail Business—Greater Opportunities for Development in Agriculture Than in Any Other Industry—Prosperity of Farmers Means Directly More Business for the Retailers.

With a firm belief in the stability of the position in which Canada stands today as regards business, and with an encouraging outlook for Canadian trade and commerce generally, we believe the present year, 1908, will be one of the most prosperous and most successful in the history of the Dominion. There is one fact, however, on which this result is directly dependent. From the very nature of our country the material progress and prosperity of the greater part of Canada is admittedly dependent on the prosperity of the industry of agriculture. If Canadian farmers are well situated financially, all other business interests will necessarily be active and healthy.

With this fact in view it is very evident then that any movement or circumstance which conduces to the prosperity of the farmer, who is the basic wealth producer, must prove beneficial to all branches of commercial activity. This is a fact, which while we have heretofore admitted its truth in theory, has not influenced the great majority in their attitude toward the farmer and the farming industry. As a consequence, efforts to place it upon a better basis have not met with the general encouragement which would have been accorded it, were its importance, from a national standpoint, appreciated.

The farmer is the best customer the Canadian retailer has. He not only buys more goods, but on the whole, he buys a better class of goods and he pays his bills. In spite of this fact he has been neglected.

The Retailer's Opportunity.

Here is where the question touches the retailer. He should see that to encourage the farmer is to promote his own interests. If agriculture can be made a more profitable business, and the farmer becomes more prosperous, he will naturally spend more money for the goods the merchant has to sell.

The opportunities for development are greater—many times—in the farming industry, than in any other. Many who read this will not believe the statement. Indeed, many farmers—unfortunately the majority of them, either do not believe it or they do not realize it. It is a fact, nevertheless, and must be recognized.

Possibilities of Production.

Canadian farms are not beginning to bring out the wealth they are capable of producing. The last year for which statistics are available, the average yield of wheat per acre in Ontario was 24 bushels and a fraction. No one will say that this yield represents the best possible average results, but the majority of persons will be amazed to learn just what the possibilities in this one instance are. If the condition were ideal, if the seed were perfect—no weak, or worse still, dead grains—if the soil were properly cultivated and the grain properly covered after sowing; if the land were clear of weeds and if reasonably favorable weather conditions prevailed, instead of producing 24 bushels per acre the yield might be 250 bushels. That is, the number of grains of wheat in the bushel and a half necessary to sow an acre of land are capable of producing 250 bushels.

These are under ideal conditions, it is true, and possibly they will never be absolutely reached, and yet their accomplishment is quite within the range of human possibility. Think of the practically limitless opportunities. If Ontario's average grain yield were but increased five times instead of ten, as it might be, imagine the added wealth such an increase would represent.

Some Examples in Figures.

That the Canadian farms are not producing anything like the wealth they might, must be admitted. Here is more direct proof of it: The average yearly yield of milk of the cows of Ontario is not over 3,500 pounds, according to the statement of C. C. James, Deputy Minister of Agriculture. There is a herd of cows at the Guelph Agricultural College and the average yield of four of the best cows in that herd last year was 13,008 pounds, not quite ten times the average yield of the cows of the province. These four cows produced a profit over value of feed of $279.88, or an average of $69.97 as compared with a net average profit for the cows of the province of less than $7.75.

Were the dairy cattle of Ontario equal to the average of the Guelph herd—which is quite possible—instead of producing $17,000,000 worth of cheese last year, the province's cheese production would have been worth more than $160,000,000.

A Local Application.

Let us localize these figures. Oxford county last year produced cheese to the value of $1,200,000. With cows equal to the average of the four at Guelph, the farmers would have had more than $10,000,000 from their sale of cheese alone. Would the retailer of Oxford county have done more business had the farmers received $10,000,000 instead of $1,200,000? The answer is easy.

Of course, results such as are here suggested could not be secured in one year. The improvement in the value of the product of the agricultural industry can only be gradual and of an evolutionary nature.

To Make 1908 Prosperous.

There are some things, however, which may be done to make this year, the year 1908, the most prosperous and the best in the history of Canada, so far as the farming industry is concerned. To the accomplishment of this end the united energies of the farmers, as well as the merchants and business men in all branches, should be directed. Some of these things the farmer must do himself. He must plan for the biggest crops he ever harvested and he must work towards this goal. It is not too early to prepare for the season's crop. In the first place, he must get his seed, and he should exercise the greatest care to see that it is the very best possible. If this is to be the banner year the farmer must also see that the land is given the necessary cultivation in order that it may provide the most perfect facility for the multiplication of the seed.

The Problem of Help.

The question of help is one of the most serious problems the farmer has to solve. If, because he cannot secure the help necessary, he is able to work only fifty acres of his hundred-acre farm not only will his income be only half what it might be, but his spending ability will be only half what it would otherwise be.

The solution of the help problem lies, it would seem in this fact. Farmers must erect houses—not necessarily costly dwellings—on their farms and engage married men—men who are now in the cities, and who, if the accommodation were afforded, would gladly take their families to the country. This again works to the advantage of the merchant in the country district, because it not only increases the profit of the farmer, and makes it possible for him to spend more money, but it also practically doubles the population of the farming communities and likewise the number of prospective customers.

Profitable farming cannot be done with fewer men. If the tremendous possibilities of agriculture in Canada are to be reached, the farm population of the area at present under cultivation must be doubled. Farmers, themselves, should be made to realize this, for their own benefit, as well as for the sake of the general prosperity of the Dominion. Steps should be taken at once to build on every farm, where one has not already been built, a dwelling for the help.

Encourage the Farmer.

The practically unlimited possibilities along this line of effort, justify business men—merchants and manufacturers—giving every encouragement to the farmer; driving him, if necessary. Only a few farmers, a sprinkling here and there, have taken a wide enough view to realize what lies before them, and they may have to be convinced in spite of themselves that they are the mightiest factor in Canada's future industrial progress, since agriculture offers much more scope for development than any other industry.

In this proposition The Grocer sees the supreme opportunity for Canadian retailers. No movement yet undertaken promises a fraction of the direct personal benefit to them that this movement for the development of agriculture does. Every factor which results in the improvement of the financial position of the farmer benefits the retailer as soon as it does him, because his increased income is useless to him until he has spent it with a merchant in the procuring of some necessity or luxury.

This is an opportunity; in the first place, to inspire and encourage the farmers to make this year the most prosperous in their history, and to in-

augurate the campaign for the speedy adoption of the newer and modern farming ; the farming which will increase five or ten-fold, the earnings of the Canadian farms.

How the Work May Be Done.

It is worth retailers becoming enthusiastic over. Here are some of the things they might do : By personal contact with farmers get them to attempt what has been suggested in this article; enlist the support of the local press in bringing to the farmers a conception of their opportunities ; call a meeting of local business men and discuss the question and endeavor to secure concerted action ; then get a meeting of farmers themselves and talk it over with them. They do not know themselves yet, what a future they have in store ; get some speaker to go and tell the farmers and your fellow-merchants what the enormous possibilities are. If there is no local man who has the enthusiasm or who is in possession of the knowledge write The Grocer and one will be sent.

No other commercial problem looms so large in Canada to-day. It is a matter, which, if taken in hand and carried forward, will give retail business a magnificent impetus. Will the readers of the Grocer grasp the opportunity ?

* * *

The Ontario Agricultural College, Guelph, recently issued some information for visitors which, in connection with the preceding article, will be found particularly interesting. The matter describes the work being done at that institution along the lines suggested in this article and will be found below.

What The Agricultural College Does For Farmers

The Ontario Agricultural College was established in May, 1874. The first winter term opened January 1st, 1875, with 28 pupils in attendance, "all that could be crowded in." In January, 1908, the thirty-fourth winter term was begun with 837 students in attendance.

The following is an outline of the work done in the several departments :

Field Husbandry.

Improve by systematic selection and by cross fertilization old varieties of field crops ; originate new ones of greater value and distribute same to farmers throughout the province. Instruct farmers' sons in the different systems of farming ; different kinds of soil ; application of manures ; preparation of land; examination of farm seeds ; methods of cleaning and selecting seed ; study of cereals, roots, fodder crops, grasses, clovers, methods of sowing, harvesting and marketing.

Animal Husbandry.

Recent investigations have dealt with the relative value of short keep and long keep steers for feeding purposes ; the relative merits of feeding steers in loose boxes and tied in stalls ; the cost of raising pigs from birth to market ; and a beginning has been made in the cross-breeding of swine. Students are given practice in judging horses, cattle, sheep and swine ; lectures are delivered on breeding and pedigrees, feeding and management, and the history and characteristics of the principal breeds of live stock. As a result of the efficient manner in which this branch of the work has been carried on, the recent honor won at the International Live Stock show in Chicago is sufficient evidence.

Dairy Husbandry.

The herd—16 cows : Average yield of milk per cow. 9,585 lbs.; average amount of butter per cow, 390 lbs.

One cow in 365 days gave 20,778 lbs of milk, or 913 lbs. of butter. The average cow in Ontario gives less than 3,000 lbs. of milk per year. Hence the need for careful selection, proper feeding, and impartial weeding out. The cost of feed per cow varied from $25 to $45. The profit per cow, over cost of feed varied from $5 to $45 on butter, and from $37 to $140 on milk.

The improvement in the quality of butter at hotels and in the homes of the people in towns and cities may be directly traced to the traveling dairies that started from our dairy department and visited all parts of this Province.

Physics.

This department is prepared to send a representative to any farm in the Province of Ontario, to take the levels of the land, locate the drains, and give information generally on the subject of drainage; the only expense assumed by the farmer being the man's travelling expenses at the rate of one cent per mile each way, together with his keep.

To be able to conserve soil moisture is one of the most important problems confronting the farmer to-day. All plant food is available only when in solution, consequently when the land is hard and dry plant food will be scarce and crops must suffer.

Botany.

Treats with the subject of weeds and how to destroy them; the question of fungus growth, and when and how to spray to exterminate it; the importance of growing grasses and clovers; the identification and prevention of smut, rust, mildew, etc.

Entomology.

Comprises a study of the life history and habits of insects, in order that they may be promptly checked. Farmers' boys are taught all about insecticides, and bulletins are written and sent broadcast to the farmers of the Province.

Horticulture.

Instruction is provided in the growing of all kinds of fruit, vegetables and flowers, and experiments are conducted with the small fruits, and with cover crops for the orchard. Through the agency of the experimental union leading varieties of fruits, fruit trees, and flowers have been distributed throughout the Province.

Bacteriology.

Nitrogen is one of the principal needs of a plant. It is worth, commercially, about 20 cents a pound. The air is 80 per cent. nitrogen, and yet plants cannot use it in the form in which it exists in the atmosphere. Certain bacteria, if introduced into the soil, will work on the roots of clover and other leguminous plants, take the nitrogen from the atmosphere, and convert it into plant food. Our bacteriologist propagates in his laboratory, and supplies in small bottles, millions of these nitrogen-forming bacteria, which may be spread upon the seed before it is sown, and thus introduce into the soil these nodule-forming bacteria. A crop of clover will leave in roots alone about fifty pounds of nitrogen per acre. Thus the plant food supplied to the soil by a crop of clover is $10 per acre in one year, and the farmer has the clover crop, tops, and leaves to the good.

Chemistry.

An analysis of water, feed stuffs, and fertilizers, such that will aid the farmer in arriving at a true idea of their value. With wheat and flour too, work is being done to determine the best milling varieties and to ascertain from the differences in composition whether some scientific basis could not be found which would make the blending of the home grown varieties of wheat more profitable.

Forestry.

By furnishing seeds, seedling trees, or cuttings free of charge, this department is endeavoring to assist farmers to improve their woodlots, plant shelter belts, and reforest waste portions of the farm.

Poultry.

Chickens used to sell on the market anywhere from 20 to 30 cents apiece. To-day they bring three times that amount, where they have been properly fed, killed and dressed. We have no trouble in disposing of our poultry here at from 12 to 15 cents a pound dressed, and our students are taught how to breed and feed so as to obtain these results. We have four different styles of poultry houses, to test the effects of heat and cold on the egg-laying proclivities; hence we find that the coldest, and therefore the cheapest house is the best, and that fresh air, not warm air, is essential to good egg production.

Macdonald Institute.

Three things are taught: Domestic Science, Manual Training and Nature Study. In domestic science there were 260 girls in attendance last year, each one being obliged to learn cooking, sewing and laundry work. In a Province where over 90 per cent. of the women do their own housework, what a blessing it would be if they were all properly trained for their daily duties. Manual training makes boys and girls handy in the use of simple tools, and nature study, which is really elementary agriculture, helps teachers to the extent that they may return and give to their pupils an education that will more nearly fit them for the earning of their daily bread.*

*See editorial on this subject, headed "Building for Business."

HARDWARE TRADE GOSSIP

Quebec.

H. L. Holstein, Whitney, Ontario, has been visiting hardware circles in Montreal.

J. Lacombe, Sherbrooke, Que., and Mr. Loveland, of Loveland & Stone, Cutler, Ontario, have been visiting Montreal.

W. D. Hamilton, representative of the Canada Paint Company, Montreal, in Montreal and the Province of Quebec, is now convalescent after a very severe illness.

H. W. Aird, the treasurer of the Canada Paint Company, Montreal, has returned to Montreal after a short visit to New York and Atlantic City.

The Montreal Manufacturers' League wound up the season with three final games at the Arena. Montreal Steel Works defeated their strongest rivals, the Northern Electric, by 1 goal to nil, thus going through the season without a defeat, and winning the championship. The Canadian Rubber Company beat the Montreal Rolling Mills by 1 to 0, while the C.P.R. beat the Montreal Packing Company by 8 to 4.

Ontario.

B. M. Johnston, hardware merchant, Newbury, has sold his business to G. D. Dobbyn.

G. B. Loree, hardware merchant, Bloor street, Toronto, has assigned to Osler Wade.

Arch. McFarlane, manufacturers' agent, Montreal, was a visitor in Toronto this week.

J. W. Jamieson, of the Bowes-Jamieson Co., stove foundries, Hamilton, was in Toronto on Wednesday.

McCulloch, Nichol & Drake, hardware merchants, Grand Valley, Ont., have been succeeded by J. A. McCulloch.

P. A. Galarneau, representative of J. H. Gignac, Limited, Quebec, manufacturers of toboggans, was a caller at the Toronto office of Hardware and Metal this week.

H. B. Dale, formerly of H. S. Howland & Sons, Toronto, has joined the traveling staff of Lewis Bros., Montreal, and will make North Bay his headquarters. When with H. S. Howland & Sons, Mr. Dale covered Northern Ontario.

H. B. DALE, NORTH BAY.

Who will represent Lewis Bros. in Northern Ontario in Future.

Ingram & Davey, St. Thomas, spent last week visiting different stores in Buffalo, Rochester, Syracuse, Utica and New York City, in order to get pointers for their new store which they will erect in St. Thomas. Their architect will also visit several points in Michigan, where there are some good stores. The idea of the firm is to have as complete a store as it is possible to get with a view of being able to handle goods with the best system and despatch.

Winnipeg Paint and Glass Company's New Building.

The hardware stock of Dreany Bros., Cobalt, the inventory value of which is over $7,000, has been advertised for sale by tender by the assignee.

Fire did damage to the stock and premises of the James Smart Manufacturing Company, Brockville, last week. The loss was fully covered by insurance.

PRESENTED WITH A CHAIR.

G. Percy Breckon, assistant manager of the Metallic Roofing Company, Limited, Toronto, has severed his connection with that firm with the intention of going into business on his own account, and on Saturday evening last the male members of office and sales staff waited upon Mr. Breckon at his home, 62 Cowan Avenue, and presented him with a beautiful easy chair of mission design, as a testimonial of their good wishes. Various members of the staff delivered short addresses, in which they spoke of their appreciation for the kindnesses which Mr. Breckon had shown them during their long association with him. All the speakers declared that they would miss his assistance and supervision. The presentation was made by F. R. Richardson.

Mr. Breckon, in reply, spoke of his early experiences on the road, when he was introducing the firm's metal roofing. These were the pioneer days of the business, and the Metallic Roofing Co. manufactured only brick siding and one shingle. Mr. Breckon briefly traced the growth of the firm since that time until the present, when they are in the front rank of Canadian industries. In conclusion, he thanked the staff for the beautiful gift and also for their goodwill, which he appreciated even more than the gift. The evening was passed most pleasantly, and the party broke up in the early morning.

Mr. Breckon is one of the best-known figures in the sheet metal business. He has been very closely identified with the development of sheet metal building goods in Canada, and he has gained an invaluable experience.

WINNIPEG COMPANY'S NEW BUILDING.

Last fall it will be remembered the big warehouse in Winnipeg of the Winnipeg Paint and Glass Co. was totally destroyed by fire. The company at once undertook to build a new warehouse on Gertrude Ave., not far from their sash and door factory, and the accompanying cut shows the completed building. The fire occurred on October 9, and by February 1 the company were making shipments from the new building. This is surely a record of quick work.

The new building is two storeys high with basement (90 x 110) used entirely for a paint warehouse and art glass factory. The basement will be used for oils and varnishes. The first floor is devoted to storage and shipping room purposes, while on the second floor will be found the various lines of shelf goods including the Martin-Senour paints and specialties. On this floor also is the art glass factory, the products of which are a credit to Winnipeg.

With their new warehouse the Winnipeg Paint and Glass Co. are in a better position than ever before to handle their trade in paints and glass.

H. Shotton, plumber, Kamloops, has received the contract for the plumbing work on the new station at that city.

Hardware Letter Box

Any questions on trade subjects will be answered by the editor in this department. Do you want any address, any special line of goods, anything relating to the hardware trade? Ask us. Letters from manufacturers, jobbers, travelers, retailers or clerks are solicited. Suggestions for trade improvement or discussions on trade evils are invited.

Lathe Work.

J. R. Schiedel, Breslau, Ont., writes: Locate for me a firm owning a Waymouth lathe who can turn out wooden balls about 1⅝ inches in diameter with holes one ⅝ and the other ¾-inch in diameter. The balls are for bamboo paper racks.

Answer.—Sexton & Co., Terauley St., Toronto are in a position to do your work.—Editor.

One Minute Washer.

The Bond Hardware Co., Guelph, write: Will you find out for us, the firm name and address of the company making The One Minute Washer. We believe they are made in Toronto.

Answer.—The White-Erkhardt Washing Machine Co., 121 Logan Ave., Toronto, make the washer you inquire for. —Editor.

Stove Castings.

Ralph Tait, Arnprior, writes: "Inform us where we can obtain castings for Prince of Wales high oven cook stoves, also what firms manufacture bakers' ovens.

Answer.—(1) The Percival Plough & Stove Co., Merrickville, Ont., manufacture this stove and will supply any parts needed. (2) The Fletcher Mfg. Co., Toronto and Robert Gardner & Son, Montreal, manufacture bakers' ovens. —Editor.

Coopers' Tools.

In addition to the names of manufacturers of coopers' supplies given in last week's paper, asked for by C. C. Falconer & Co., Winnipeg, the following firms are named as specialists in coopers' tools: E. & J. White Co., Buffalo; Mack & Co., Rochester, and Fayette R. Plumb, Inc., Philadelphia.

Ruberoid Roofing.

John Fenderson & Co., Sayabec, Que. write, asking Hardware & Metal who are the manufacturers of Ruberoid Roofing in Canada.

Answer—Ruberoid Roofing is manufactured in Canada by the Canadian branch of the Standard Paint Co. at Montreal. Their Canadian offices are in the Board of Trade Building, Montreal. —Editor.

Sand Paper.

"Manufacturer" asks the name of makers of sand paper in Canada.

Answer.—Delancy & Pettit, Jefferson avenue, Toronto.—Editor.

HARDWARE MAN KILLS BEAR.

The accompanying photo is that of J. E. Moseley, hardware merchant, Huntsville and J. Duncan, one of his clerks. Mr .Moseley is one of the best known business men in the northern portion of Ontario and carries on a very extensive business in general hardware as well as carrying a complete line of sporting goods. He is also an ardent sportsman and possesses innumerable trophies of the hunt which have fallen to his unerring aim.

The three bears shown in the photo were shot about 10 miles from Huntsville when on a deer shooting trip last fall and though having met with this remarkable success it is quite needless to say that the party also got their regular complement of deer.

Mr. Moseley's reputation as a fisherman is widely known and any person meeting him can well depend upon hearing some of the most exciting and scaly "fish stores."

Huntsville Hardwaremen Good Hunters

A SUBSTITUTE FOR CONCRETE.

A composition resembling concrete, now being considerably used in France, and known as lime beton, is described as being more generally used than concrete. It is a cheaper composition than cement beton, or concrete, easier to work, and if the initial load be not too great it is for nearly every purpose just as good. A good lime beton can be obtained by mixing mortar and stones, gravel or cinders, mortar and good-sized stones making the best composition. Probably one-half of the houses in Marseilles have been built of this material, and thousands of older buildings, many hundred years old, are held together by ordinary lime. Walls built of quick-lime beton must be laid up slowly but with hydraulic lime beton they can be erected as fast as masons can work. The solidity of lime beton construction is shown by the sea walls and docks in Marseilles, where masonry of this kind may be seen to which building material can be subjected.

A SIMPLE HINT.

Visiting one of our big provincial cities recently, there was a rather well known gentleman, who was, however, a "foreigner in those parts." He was in want of a pen, ink and paper, and he was observed to travel along one of the principal business thoroughfares on his quest. Somewhat strangely, as it was thought at the time, he passed the first two stationers' shops without entering, but on reaching the third went in and made his purchases. Thinking perhaps there was some element of superstition in this performance, a friend asked him why he had passed the first two shops, which were more convenient for him to enter. His answer was that when buying any article in a strange town, he always looked at the windows, and if he found them unclean or untidy he kept walking until he came to a more attractive and better kept establishment. He considered the chances of securing clean goods rather poor in an establishment, the proprietor of which did not care for his windows. This little incident gives a simple and obvious hint to those who neglect their windows, which they should not consider themselves above taking.

Most men live a life of going to do and die with nothing done.

No salesman can conscientiously believe that he is through with a customer until his order is secured.

BUILDING UP BUSINESS.

The farmer, as a class, is the most generous spender in all Canada—the best customer of the manufacturer and merchant. The more money he makes the more he spends with the retailer. He is not making anything like what he should for the land he occupies and the labor he expends.

It was pointed out in these columns recently that in three items alone, beef, bacon and cheese, the revenue of the Ontario farmer alone increased $35,000,000 a year through the adoption of improved methods. This means $200 a year to each farmer in the province. Suppose each merchant has 100 farmers as customers, this means $20,000 a year increase in the money these people might spend with him. This is something worth while. It could be made double that easily by further improvements in farming methods and every merchant and manufacturer can help by encouraging the work of the agricultural colleges and departments of the Dominion and their own province, but particularly by encouraging the farmer to go in for methods that will make more money. Get him to attend the institutes and shows, read good papers, visit the colleges and experimental farms and send his sons and daughters to study there.

The college at Guelph recently issued some information for visitors about the work they are doing there, which our readers can gossip about with their farmer customers. In any province where they are not doing as well as in Guelph business men should draw the attention of their legislators to it. The article appears elsewhere under the head "What the Agricultural College Does for the Farmer."

THE METAL SITUATION.

March has not opened out very auspiciously for the metal markets. Merchants are still awaiting the demand that should, according to the law of average, be in evidence, but is not. Manufacturers do not appear to want any metal—except tin users in the States, and they are paying pretty heavily just at present for neglecting to cover themselves properly. The possibility that what has happened in tin will most likely be repeated in the other metals, and more seriously, too, as in the present case there has been merely a spot scarcity and not a complete shortage, does not seem to have warned consumers of the danger of buying from hand to mouth.

Inquiries from large purchasers are still conspicious by their absence, although the smaller consumer is showing up in better strength. But it is not the user of an occasional carload but the user of many, who influences most quickly the tone of the market. Besides, if the large corporations came into line and bought, the smaller consumers generally would have to follow suit. But unfortunate there is a complete suspension of large buying. The paralysis of the demand is extraordinary, and shows that the markets generally were hit harder by the recent slump than was at one time imagined.

Stocks are not large, unless reports greatly err. Although we do not anticipate that the spot scarcity in tin will be repeated in New York, unless an abnormal demand arises, as fair shipments are on the water, the effect of the recent shortage will be felt on stocks probably all the year. The Dutch Government are also offering less metal for the remainder of the year, so that the tin supply must be on the light side, presuming, of course, that there is but an average demand. Copper stocks cannot be over-abundant unless the heavy exports from New York in December, January and around the openings days of February, were simply consigned to European warehouses for speculative purposes. In spelter, production has been curtailed from the commencement of the year, while in lead the reluctance which has been shown by many holders to accept orders for future delivery shows that the supplies of the metal have not been considered particularly heavy.

Why, then, in view of this, and of the fact that the present output could not cope with more than an average demand, if it could do as much, is the hesitancy in buying maintained? Consumers must come into the market some time or other, and the longer the delay, the worse the position will become. All the metals are cheap at present, but they will not be so when the demand breaks in. Holding back with the hope of securing better prices in the face of low prices and decreasing stocks is a dangerous game to play. When the market does turn there will be no half measures to the advance, and the consumer who covers himself now will be wise. But nobody seems inclined to make the first move. Users are waiting for a leader to start the buying, forgetting that it is the leader who will command the best prices at the expense of the others. There will be some startling developments in the market ere long, but in the meantime merchants, like Micawber, are waiting for something to turn up.

QUALITY VERSUS PRICE.

The really good retailers, the kind who are making money and are building up most satisfactory businesses are coming more and more to emphasize quality in their goods rather than price. It is not a question of how cheap, but how good.

And isn't it the high grade goods that make the biggest profits? There is a certain class of customers, of course, and there always will be, who look for the cheapest goods of everything and who are not satisfied unless they think they are getting a bargain. Some dealers cater to these and buy a lot of third grade stock to sell at low prices. This may be all right in a few lines but are they not, in most cases, making a mistake? The quality of the goods rather than the price, should be emphasized, and in nearly every case those customers just mentioned would, if they could only be brought to think so, get better satisfaction from the better class of goods. It will pay to try to educate them to the higher standard.

THE SITUATION IN THE WEST

The Western Viewpoint by our Special Winnipeg Correspondent.

Inspection returns for the first six months of the crop of 1907-8 make interesting reading in the light of the prices that have been paid and the scare articles in American papers as to the western farmers starving because all the grain was frosted. During the period mentioned there have been inspected out of the crop of 1907, 39,804,000 bushels, and of this amount 19,301,730 bushels were of contract grade. During the same period last year there was inspected out of the crop of 1906, 37,659,510 bushels and of this 18,937,930 bushels were up to grade. The difference of course lies in the fact that while in 1906 the bulk of the contract wheat was No. 1 northern and no hard, the bulk of the 1907 contract was No. 2 and 3 northern. However, the much higher prices obtained this season, even allowing for the slump at the time of the bank stringency, have made the wheat sold much more valuable to the farmers than that of the previous year. Not only is this the case, but the low grade wheats, such as Nos. 5 and 6, have sold for very high prices from time to time, making the average of the whole season a very good one.

* * *

One feature of the report which cannot fail to cause regret is the fact that so large a portion of oats have graded rejected, in all 3,328 cars, as against 148 last year. This has been occasioned by the frosting of the oats, and though many of these samples have been extremely fine in appearance and of exceptional weight, as they cannot be used for either milling or seed, they had to be classed as rejected. This has made the task of securing seed oats an exceedingly difficult one and indeed it is expected that the acreage sown to oats this season will be considerably curtailed on this account. However, though the oats have not brought as high a figure as unfrosted oats would have done the price has been good, as the scarcity of feed in Ontario has made the demand good, and prices have ruled high accordingly. Taking into consideration that 1907 was most distinctly an off year, the returns of the past six months are very gratifying, not only as to quantity but also as to quality. It must be borne in mind, however, that while last year at this time interior elevators were full to repletion, owing to the car shortage, and farmers had still enormous quantities in first hands, this season cars have been abundant, the winter has been ideal for crop movement, and there is no doubt the bulk of the wheat is out. Interior elevators are carrying comparatively small stocks at present and it is questionable if now there is even four million in farmers' hands to come forward. The government seed purchasing depots have brought out the good wheat and much that has been inspected at Winnipeg in the past three weeks has been forwarded in consignment with a view to its being used for seed and if not suitable, to be sold.

* * *

This brings us to the condition of the wheat market, which has been one of great strength for the past few days. The demand from millers for contract wheat has been steady and persistent, while offerings have been very light and in consequence a good many purchases have been made at 1 to 1¼ premium for one and two northern. Demand for low grade wheats is very active, export trade has shown considerable revival, and during Friday a bid of 1¼ premium for No. 4 failed to bring out a single bushel to the man who was trying to fill a 20,000 bushel order.

"Some day soon we will see fireworks on this market," is the verdict of some of the most conservative men in the trade and that is also the opinion of your correspondent. No one knows just how small is the amount in farmers' hands, but everyone is pretty well assured that it is small and this means that any sudden increase in demand will send prices skyward. It may not come until navigation opens, but it will come without doubt and then those who have been consistent bulls all winter will have the extreme satisfaction of saying "I told you so."

* * *

One of the events of the week that is of supreme importance to the west, in that it so materially affects building, is the application for charter of the "Union Lumber Company," with a capital of $10,000,000 and controlling 3,000,000,000 feet of standing timber. This company consolidates no less than seven of the leading lumbering plants of the Canadian west, including the "Red Deer Lumber Company," Barrows, Sask., with a new and up-to-date mill, second to none in Canada; the Elk Lumber Company, with splendid mills at Fernie, B.C., built of concrete; the Sunset Timber and Lumber Company, the Yale-Columbia Lumber Co., and other smaller concerns, with mills at Nelson, Cascade, Revelstoke and Westley, B.C. Other large mills will be erected this spring. The new company are also interested in coal lands. The object of combination is to reduce cost of production and the new company claim they will be able to handle the entire output for one-third the cost of the separate plants. This will be good news to the west. One of the raciest things said at the recent agricultural meetings was a remark of A. P. Stevenson of Nelson, Man. Someone asked him what he thought of the cost of lumber and he replied: "I bought 1,000 feet the other day and it is piled in my yard. Every time I pass it I feel like taking off my hat as only paying due deference to so small a thing which cost so much money."

* * *

The real estate situation continues to show improvement in the number of inquiries, if not in the actual number of sales. All the larger firms report an increase of inquiry from Great Britain especially with regard to sites suitable for factories or for industries already established.

Retail trade is good and one of the noticeable features of the wholesale fur trade is that stocks are better cleaned up than they have been for years, the Pacquets, the Redmonds and that ilk are well sold out. Inquiries among the fur and departmental stores, where furs are sold exclusively for cash, elicited the information that it was only the extreme fag ends which are being carried over. The winter has been the mildest for 30 years, furs were somewhat reduced in price because dealers were afraid of their stocks and it shows that furs this winter have largely been bought as a personal investment, because it was an advantageous season to buy, which does not look like very hard times.

Probably in no city of the worlds are furs worn so extensively by all classes as they are in Winnipeg. It is safe betting that any day in Winnipeg, cold enough to wear furs, one sees an investment of $1,500,000 on the streets in fur garments alone. This is a very conservative allowance. These are minor facts, perhaps, but they have their significance to the man in trade.—H.

THE POOR MAN'S GUN.

A measure has been introduced in the Ontario Legislature to again legalize the automatic gun prohibited by legislation passed a year ago. During the past year there have been no prosecutions of persons using the automatic gun and the only visible result of the legislation has been to stop the sale of the weapon and prevent merchants having stocks to turn their goods into cash.

In view of the movement to repeal last year's legislation it may be well to consider the case in favor of the automatic gun's use. All interested in its sale will undoubtedly use their influence with their local M.P.P.'s to remove the ban on the gun, and others may aid them if they understand the situation better.

The argument used against the gun last year was that its use would be very destructive to game birds, the guns being repeaters and the reloading action being worked by the force of the recoil. Six shots are fired in rapid succession by six pulls of the trigger, and then there is the necessity for a comparatively slow insertion of six more cartridges. Against this it is pointed out that with the old style gun many ducks were wounded to die amongst the weeds while with the repeater the hunter has a better opportunity to kill before the birds become alarmed.

Arrayed against the automatic guns are the shooters who own large preserves, while favoring their use are those who cannot afford expensive weapons and must bag their game in the public shooting grounds. Hardwaremen, as a rule, are disinterested, although it is to their interests to have as many hunters as possible and to have the game protected so that the sale of guns and ammunition can continue indefinitely. The average preserve shooter buys his supplies and expensive guns in the large cities, while the ordinary hunter deals with the merchant in his own locality.

There are strong arguments in favor of complete freedom in the use of guns, regulating the destruction of game by limiting the bag of each hunter to so many birds each season, just as the number of deer is now limited. It is said that one preserve shooter killed 1,500 ducks last year.

The opinions of hardwaremen are solicited on the subject of game destruction. Would it not be better to allow the automatic gun to be used and limit the bag of each hunter?

Markets and Correspondence

(For detailed prices see Current Market Quotations, page 66.)

MONTREAL HARDWARE MARKETS

Montreal, March 13.—Trade has improved this week considerably. Orders for future delivery are not only more numerous, but they are showing a gratifying increase in bulk. Retail merchants are beginning to see that there is no reason why they should hold back any longer from fear as to the future. Money is easier, and the industrial outlook most promising. Trade generally will go ahead with a spurt when the spring opens out and seeding operations are in full swing and the dealer must be ready for the demand. The Northwest is showing a livelier call, largely influenced by the starting of railway construction work. If only taking one branch of Canada's industrial operations—that of railroad construction work—we have proof positive of the great expansions that is about to take place. Immense sums of money are to be spent in the next five years for railway work, and the whole trade of the country will feel the good effects. Money will be circulating freely, the consumptive needs of the country will be augmented by the tons of materials wanted, by the feeding, clothing and housing of the armies of laborers employed, while more land will be opened up for the farmer. And what will happen in the one direction, will happen in other quarters of industrial work. There is no need to doubt the future, and that the dealer is realizing this, can be seen from the improving trade. Undoubtedly business is behind hand, compared with former years, but it will assuredly pick up, and there is no reason why this year should not lead all previous ones.

With the falling off in lumbermen's supplies, other lines have come in, especially sugaring outfits, which are moving well for immediate delivery. Copper rivets have been reduced, the discount being 35 and 12½, while a revised discount list for bolts and nuts has been issued. Shovels are still selling at cut prices. Bookings for clothes' line pulleys, clothes' lines, bed cords, kitchen utensils, are increasing. General orders for immediate delivery are likewise showing more strength, especially in bolts and nuts. Altogether trade is brighter, and the swing of the pendulum is undoubtedly being felt.

Shovels—The cutting in shovels is still being continued, amounting in some cases to as much as 30 per cent. Although some dealers have increased their purchases to take advantage of the lower prices, business, as a whole, has not been stimulated very much. There is little doubt that makers will soon come into line again, and stop the war.

Builders' Hardware and Supplies—Orders from the Northwest are improving, although they are still on the light side. The East is showing up well, and is being stimulated by the brighter prospects in building construction. Architects are generally busy, and landlords seem to have made up their minds to go on with the building schemes that at one time looked if they were likely to fall through. Lock sets, bolts, and butts are showing improvement every day.

Railway Supplies—The various lines are picking up well, and a stronger demand is coming from the Northwest, where railway construction work is starting. Powder has been in stronger request for immediate delivery, while picks, and hammers, are maintaining the strength noted last week. There has been no change in prices.

Lumbermens' Supplies—There is not much doing now in these lines. Driving operations will not be long delayed, and the season therefore, is practically over. A few orders are coming in for skidding tongs and chains for immediate delivery, but the other articles are dead.

Spring Goods—Kitchen and household supplies, wringers, and outside implements, such as lawn mowers and garden tools, clothes pulleys, are showing substantial improvement. The next week or so should see these lines in full swing, as they are generally the first to feel the advent of spring. Prices are unchanged.

Bolts and Nuts—A revised discount sheet has been issued. Carriage bolts, 3-16 and 1-4-inch in diameter are now 70 off, while 7-16 and larger bolts are 60 off. Orders have greatly improved this last week, especially from the Northwest where good construction work is going on.

Copper Rivets—This article has been reduced, the discount now being 35 and 12½. Despite the low price of copper prevailing for some time, this is only the second reduction that has taken place, and shows how makers have maintained prices. Fair trade is being done, and no doubt the cut will stimulate the demand.

Sugaring Supplies—Sugaring operations will soon be taking place, and sap spouts, bits and pails are moving well for immediate delivery. Maple syrup is commanding better prices than it did some years back, and prospects are favorable for a good season. Prices are the same.

Sporting Goods—Guns are moving a little better as well as ammunition, but in other lines there has been no improvement to speak of over last week. A healthier demand is expected in a week or so.

Wire Goods—Fencing wire, including barb, galvanized, oil annealed, is beginning to move freely. Makers have a tonnage equal to, if not greater, than is usual at this time of the year for shipment at the opening of navigation.

Wire Nails—Since the last cutting some weeks ago on wire nails all holders, from the makers downward, appear to be maintaining prices, and as the articles from now onward, will be moving freely, there is little chance of the market being disturbed by further cutting. Stocks in the hands of the makers, generally speaking, are light, and a strong demand at the present time would have a tendency to stiffen prices. We continue to quote $2.30.

Screws—While the makers have practically caught up with the shortage on some sizes, and can look fairly well after the present demand, which so far has been light, the fact remains that the first heavy business will deplete to a considerable extent the stocks in the makers' hands. In the circumstances it will be advisable for users to cover themselves early.

TORONTO HARDWARE MARKETS.

Toronto, March 13.—Fine springlike weather has done much to increase business during the week. Travelers are again able to make good time and dealers are at last recognizing that holding out orders will only amount to loss of business to themselves in the near future. Orders that are now coming in are not only more numerous, but are much more substantial than for some time, and while booking in spring lines should be closed, a considerable quantity of orders are being received, dated for April delivery that should have been booked some weeks ago. Shipping of lawn mowers, harvest tools, garden tools, etc., has received a start this week and though the bulk of the spring shipments will not be despatched until April, early shipping is considered a good sign of future business possibilities.

Reports from the west are brighter than for some time, building possibilities have improved to a large extent, and many investors will build houses who had not considered operations in this line possible some time ago.

The large amount of railway construction proposed for this year and the large amount to be expended on mining propositions has already resulted in easing the money markets, to an appreciable extent and will undoubtedly open up a market for all lines of general merchandise. Winter lines are already unseasonable and no call for repeats has been made for some days. Sugaring outfits are in demand.

Shovels—The war among the shovel manufacturers has resulted in a cut of from 25 to 35 per cent., in addition to the 45 per cent. discount provided for in the last list issued, and the result is that dealers are booking large orders for future, as well as immediate delivery. The war is not expected to last much longer as the manufacturers will soon get together again.

Copper Rivets and Burrs—Though the metal from which these goods are manufactured has been reduced for some time the second reduction in these lines has only just taken place. Burrs sold separately are still quoted at 22½ per cent., but the discounts on rivets, and rivets and burrs has been increased from 35 to 35 and 12½ per cent. off list. The result of this reduction will likely do much to improve business, as dealers who follow market reports have held off for the reduction which has only now overtaken the market.

Bolts and Nuts—Lists on carriage bolts, machine bolts and on all lines, with the exception of the stove bolts, have experienced a revision of prices during the week. Carriage bolts, 3-16 and ¼-in. in diameter are now 70 per cent. off, while 7-16 and larger bolts are 60 off.

Wire Nails—The price of wire nails continues firm and building prospects are beginning to stimulate an increasing demand. We continue to quote 100-lb. kegs at $2.30 f.o.b., Toronto, Hamilton, Collingwood, London.

Builders' Hardware and Supplies—Building prospects have a brighter aspect at present and a good summer business is expected to result.

Screws—This market is quiet and supplies are fairly large. There is a danger of shortage again in common sizes. Quotations are unchanged.

Kitchenware and Spring Goods — All kinds of kitchenware is in demand, and carpet sweepers, dustless brushes, pails, wash tubs, and a general line of household goods are much in demand at present. Prices are steady and unchanged.

Wire Goods—The demand for wire fencing of all styles is strong and firm, and booking is well under way.

Sporting Goods—The between season dullness prevails. There is a fair demand for ammunition, but most lines are quiet at present. The past winter has turned out much better than was expected by dealers, and stocks are comparatively low.

MONTREAL METAL MARKETS.

Montreal, March 13.—The feature of the metal situation this week has been the high prices of tin in London and New York, causing Canadian prices to advance strongly. For some time quotations have been steadily strengthening under the firming influences of the primary markets, and although conditions have warranted higher prices, merchants have been content to stiffen their figures slowly rather than break in with a big advance, with a consequent unsettling effect upon the position of the market generally. Tin has undergone a sensational rise in the English market, owing to the Dutch Government announcing that the sales of Banca tin for the balance of the year would be reduced to about the figures of 1907. This curtailment of the great source of supply, on the top of the fact that stocks are extremely light, and the States an eager buyer for the time being, produced some wild speculation, with the result that the price advanced to £136 10s., an increase of £7 10s. in one day. The market fell away again, but closed £6 5s. higher than the figures of the previous week. The figures ruling in New Yorking owing to the spot scarcity, which is still maintained, and is likely to be for some time longer, naturally felt the effet of this bullish movement in London, and the record price of the year of $30.25 was reached. The market then fell off again somewhat, and the closing price was around the figure of the week before. Not for many years has spot tin been so scarce in the states as at the present moment. Although shipments amounting to 3,197 tons are on their way, it will not be before next month that any real relief will be felt. Tin consumption in February was 2,400 tons, while the arrivals were but 1,917 tons. Stocks, therefore, were drawn upon to the extent of 500 tons, leaving them at 343 tons, which is an exceptionally low state. Considering that the total tonnage on its way is not heavy in the circumstances, it looks as if consumers will have to pay even more heavily in the near future for the metal.

Copper, like lead, is in the annoying and ambiguous position of having prospects, but nothing else. That is to say, while no material strengthening movement seems near at hand, yet the belief is growing that there are better times ahead—although no one is venturesome enough to say when. This may be merely another case of the wish being father to the thought, strengthened by the effect of speculation as to the real reason why the Amalgamated Copper Company have started their idle mines again, when present conditions do not seem to warrant the fact. It is assumed that a shortage in copper is anticipated by producers, and merchants are content for the time, being to let the matter rest at that.

The steel situation is not very promising in the States. The larger railroads are cutting down expenditure, and the orders coming in are not sufficient to keep manufacturers generally at a profitable pressure. In Canada, however, the conditions are happily reversed, the railways are taking, and will for the next five or six years, every rail that can be manufactured, and there is little cause to fear that the steel industry this side of the border will feel any depression. It has been advocated that to take full advantage of this coming developement, the domestic steel industries should amalgamate, and get listed on the London market, which would widen the markets for their securities, and give them ample funds for future expansion. Be that as it may, the prospects for the Canadian steel industry, compared with the States at the present moment, are particularly rosy.

Pig Iron—The English markets are showing splendid strength, Cleveland warrants having advanced to 51s. 10d., which is fully 4s. per ton higher than the lowest point touched in January, and a rise of 1s. 3d. over the last figures we quoted. Cables indicate a generally better feeling all the way round with the probability of a further upward movement. Scotch brands have also, apparently, touched bottom, and are now being held for better prices. The English hematite market, which has, during the past six or eight weeks, been in a very weak condition, is improving, as "mixed numbers" are being placed at figures which show an advance of fully 1s. per ton above last quotations. Generally speaking, the whole situation in England and Scotland, in so far as pig iron is concerned, has assumed a healthier tone with fair quantities moving, especially in the case of export business.

The United States markets are still in an unsatisfactory ondition. Prices, practically speaking, are unchanged, although the heavier shipments going on, are all reported as made at shaded figures.

Locally, the usual mid-winter business in carload lots for prompt delivery is being done. Several of the large consumers, however, are now in the market for their spring and summer supplies. Good orders have been placed, and a number of others are under negotiation. The indications are that a fair business in pig iron can be looked for during the next month. We quote: Middlesboro No. 1, $21.50; ex-store, with a shading for large quantities for import; No. 3, $20.50; Summerlee, $25.50.

Ingot Tin—Tin has been fluctuating in the Old Country under heavy bulling movements, and finished up much stronger than our last quotations. Starting at £128 10s., a sensational rise was made some days later to £136, due to the announcement that less Banca tin would be offered by the Dutch Government during the remainder of the year. The price fell away again to £133 10s., but closed firm at £134. 15s., making a remarkable advance over our last quotation of £6 15s. The spot scarcity in New York has been maintained and under the influence of the advance in London the price rose to $30.25, but it declined again to $29.75-80, practically the same as the closing figure given in our last issue. With stocks so light, and New York clamoring for spot metal, prices have stiffened here again, and we now quote ingot tin at $34, an advance of $1. Merchants are buying largely to cover themselves, and we anticipate higher prices in the near future.

Copper—Copper has advanced in the Old Country, being now £57.15, an increase of 3 shillings and sixpence. This is probably due to the stronger tone manifested last week in the American markets where the domestic demand, along with the exports, rallied for the time being. It cannot be said, however, that the immediate prospects for copper are very bright. The demand is still far below what it should be, and there is great perplexity as to what has really happened to all the metal that has been shipped across the Atlantic. If merchants really knew, they would be very much relieved. Copper is still selling around 13c in New York and we continue to quote 14½c to 14¾c. At

present, at these figures, the market is on the weak side, and lower figures may set in at any time.

Spelter—Still on the downward track, spelter is quoted at £20 17s. 6d., a decrease of 2s. 6d. The price East St. Louis is slightly lower at $4.70. Better business should be doing in this metal, which is at a price that should tempt buyers. We continue to quote 5½ for foreign, and 5¼ for domestic.

Lead—This metal is dull and weak. The London price is quoted at £13 17s 6d, with nothing doing in the way of buying. Lead was looked upon some time ago as having favorable prospects, these prospects seem a long time developing. We quote imported pig at $4.25.

Old Materials—There is no change from last week. The demand is improving, but is not yet strong enough to increase prices at all. We continue to quote: Heavy copper and wire, 11½c; light copper, 10c; heavy red brass, 11c; heavy lead, 2¾c; wrought iron, $12; No. 1 cast ,$14; No. 2 cast, $10 to $11.

TORONTO METAL MARKETS.

Toronto, March 13.—Week after week goes by with very little difference in the demand for metals, such buying as is done being in very small quantities for present consumption. Prices may fluctuate; they may even decline materially, but buyers continue to hold off, so far as any real movement is concerned. An advancing market always brings down some birds, however, and the big jump on tin a week ago, followed though it was by a re-action, encouraged many local buyers to purchase.

Pig Iron—Some inquiries have been made during the past week and merchants are hoping that these will be followed by the placing of business, as they feel that some booking must be done in March. The market has been dead for so long, however, that hopes are none too sanguine. The Deseronto furnace has been closed down again and with Londonderry out of blast and Midland on Bessemer, the Hamilton furnace is the only Canadian furnace working on foundry iron at present. Importations during the winter via Portland, from Great Britain have been nil, although a year ago large supplies were brought in by this route. We quote for No. 3 English pig, $20.75, and for No. 2 Canadian foundry iron, $22.

Bar Iron and Steel—A good business has been done in shafting, boiler plates and tubes, the volume so far being as large as in 1907. A falling off, however, is looked for this month. Bar iron is seasonably active at $2.20.

Ingot Copper—The announcement of a resumption of activity in Montana has not affected the market appreciably, although some American holders outside the trust have endeavored to unload some of their stock in Europe at shaded prices. Increased competition has caused a slight weakening in New York, but we still quote 14c locally for casting ingots. Local jobbers report an increased number of sales, several carload orders having been placed for April, May and June delivery.

Ingot Tin—The big jump of seven and a half pounds in one day last week was followed immediately by a reaction, prices soon reverting to their former level. A more steady upward movement appears to be now developing, however, and with a general feeling that tin supplies will be reduced this year it seems certain that, while the market will continue to be subject to speculative influences, the next few months will see an advance of several cents. Each buyer must figure out the proper time to buy, but it seems reasonable to figure that now, with tin very little above the minimum mark, is an opportune time for buyers to lay in stores. When active buying commences, as soon it must, prices are certain to climb up several cents with a rush. The producers of tin, both at the Straits and at Dutch Settlements, are emulating producers of iron and steel in the United States by cutting down production to meet the reduced consumption to maintain prices, which naturally further reduces consumption. During the last week of February both the Steel Trust and Lead Trust were prominent in the market, purchasing tin and also selling spot tin and futures. The advance in the London market for tin during the last week is believed to be an attempt to compel these interests to pay higher prices.

Pig Lead—No new developments to report with the market unchanged at from $4 to $4.15 for imported pig.

Spelter—Outside markets continue to weaken, with nothing doing locally. We continue our quotations at 5¼c for foreign and 5c for domestic.

Antimony—Continues dull at 10c.

Old Materials—An improvement is noted, but the change is not sufficient to result in a revision of prices. Offerings by dealers are, therefore, at the shaded figures quoted for some weeks past.

U. S. METAL MARKETS.

New York, March 12.—The "Iron Age" says: The week has been very barren of new business in the iron and steel trade at large, and while this is a disappointment, the increased confidence in a moderate and sustained betterment is maintained. It seems to be a question of patience above all.

Very little is being done in pig iron for any use. The inquiries are small and the buying is timid. What sales are effected, under competitive conditions, go to those who are willing to make concessions. Those furnaces which decline to shade prices are favored with orders only when it is a question of brand. Yet stocks are only accumulating very slowly.

The wire trade is quite busy and goods are being manufactured for stock in anticipation of the opening of the spring trade. The plant of the Morgan Spring Company at Struthers, Ohio, has been purchased by the Youngstown Sheet & Tube Company, which brings that concern into the wire trade. The purchaser will double strand the rod mill at once, which will carry the capacity up to about 8,000 tons per month. The sheet trade is gaining a little, while the tin plate trade is seasonably busy. The leading interest has 67 per cent. of its tin plate capacity at work.

In the tube trade the report is current that an Eastern mill has taken an order for 25 miles of 8-inch line pipe. Specifications are coming in rather slowly in the merchant steel trade, and iron and steel bars are quiet.

In the cast iron pipe trade there is in sight about 50,000 tons, contingent in many cases upon the successful placing of municipal bonds.

UNITED STATES IRON MARKETS.

Cleveland, March 11.—The Iron Trade Review says: Although some reports of shading of prices of plates, sheets and some other products are heard with increasing frequency, the sentiment in favor of maintaining prices of finished materials is still strong, it being clear that concessions made by small concerns have resulted in bringing out very little new business. A heavy tonnage of plates will be needed—probably from 13,000 to 15,000 tons—for the steel pipe line to be built in connection with Long Island water works improvements. A contract involving about 7000 tons of sheet piling will soon be awarded at Buffalo. The temporary excitement due to shading of prices on small lots of billets has subsided. Specifications on iron and steel bar are coming in more steadily.

It is now estimated that about 20,000 tons of iron ore are on docks and in furnace yards, and conservative lake interests are using their influence to prevent starting of the boats until about June 1. It is generally recognized that the lake movement will be small as compared with recent years, and that early activity will probably result in a reduction of freight rates and lowering of wages of all employes on the lakes—a result which both employers and employes are exceedingly anxious to avoid.

The pig iron market continues very quiet, with a tendency toward weakness in some quarters, especially in the south. There is, however, a feeling that early next month foundries will find it necessary to begin placing orders. An inquiry for 10,000 tons of basic from St. Louis has been withdrawn, and another inquiry for 5,000 tons has not yet resulted in orders.

LONDON, ENG., METAL MARKETS.

London, March 10.—Cleveland warrants are quoted at 50s. 10½d., making prices as compared with last week, 3d. lower.

Spot copper opened irregular at £57 15s., futures at £58 5s., and after sales of 100 tons of spot and 800 tons of futures, closed easy at £57 12s. 6d. for spot and £58 2s. 6d. for futures, making price as compared with last week, 17s. 6d. higher on spot and futures.

Spot tin opened firm at £135, futures at £131 15s., and after sales of 250 tons of spot and 600 tons of futures, closed weak at £134 for spot and £131 10s. for futures, making price as compared with last week, £5 10s. higher on spot and £4 higher on futures.

The spelter market closed at £20 17s. 6d., making price as compared with last week, 2s. 6d. lower.

The lead market closed at £13 17s. 6d., making price as compared with last week, 5s. higher.

Quebec and Maritime Provinces

St. John Jobbers Urge Simpler Discounts—Hardwaremen in New Brunswick Elections—Halifax May Install Water Meters-

ST. JOHN.

St. John, N.B., Mar. 11.—Now that the provincial elections are over merchants have settled down to business again. Not for many years has there been such intense interest in political matters as there was in the recent contest. The Government was completely overturned and J. D. Hazen, leader of the opposition forces, will now be called upon to form a new government. In St. John city, Robert Maxwell, contractor and John E. Wilson, dealer in galvanized iron work, stoves, etc., were among the successful candidates. In Westmoreland County, F. W. Sumner, of Moncton, hardware dealer, was defeated, although he led the opposition ticket.

An agitation for a simpler system of lists and discounts from manufacturers is being put forward by jobbers here. The matter was first broached by Emerson & Fisher, who contend that the manufacturers have no right to waste the time of the jobbers by giving them lists with a complicated system of discounts that requires a great deal of time in figuring to arrive at the actual cost of an article. They suggest that the manufacturers should try and get together and agree on some simpler system so that thousands of dollars worth of time annually would not be wasted in this way. Emerson & Fisher believe in having a list and discount system but not the complicated method now used by nearly all the manufacturers. They can see no good reason for a list that demands such a complicated series of discounts as they are frequently called upon to figure.

An example of this kind was shown. The price of the goods was put down at a certain figure less 40 per cent., 10, 10, 10, 10, 5, 5, 2½ and 1 per cent. for cash. This array of discounts in an invoice for a fair-sized order of goods means that a competent clerk must spend some hours perhaps in figuring out the actual cost, when a simpler discount would be equally as good.

Many jobbers and manufacturers from other places have expressed thmselves as favoring a simpler system but the trouble seems to be in getting it started. No doubt many readers of Hardware and Metal have experienced a lot of trouble from this source.

GEORGETOWN, P.E.I.

Georgetown, P.E.I., March 2.—Business on Prince Edward Island this winter has been dull. In the course of a few weeks, however, the spring business should commence in earnest, Even at this early date a movement has commenced to be felt. It is safe to say that never before have the prospects been brighter for a good summer's business. The bountiful crops and good prices have very materially strengthened the finances of our farmers, while the prices offered for lobsters this season exceed the liberal figures paid last year.

* * *

For the first time in the history of this province we are shipping large quantities of seed oats to the Canadian west. The firm of Joseph Reid & Co., Summerside, have one order for 75,000 bushels. The winter boats are taxed to their utmost to keep our exports moving. The price paid all along the line is 50c per bushel.

* * *

The fog signal erected at Panmure Island is now completed and gave its first warning blast on February 20. The contract for the building of this signal was let to B. D. Huntley, of Charlottetown, on November 20, and the whole work was completed on December 28. All the materials had to be handled in dories. F. P. Phillips, of the Halifax agency, installed the machinery, which consisted of two six horse-power gasolene engines, two air compressors, 16x 9 feet, one air tank and one diaphone, with the necessary fittings. Both winter boats have been signalled by the diaphone, and the captains are highly satisfied with their warning notes. This fog signal will be of the greatest benefit to mariners.

* * *

At the annual meeting of the Southern King's Board of Trade W. W. Jenkins, of the firm of W. W. Jenkins, Son & Co., Georgetown, was re-elected president.

* * *

The recent slump in the price of wire nails was a surprise to the trade, and it is probable that large quantities will be bought at the present figure.

* * *

A company has been formed to build a large new skating rink in Georgetown. It is not expected anything will be done towards building it until October, but when completed it will be one of the finest in the Maritime Provinces.

* * *

A Maclean & Co. made quite a run in small wares by removing their show cases and loading the counter, on the south side, with all sorts of small goods. People coming in had a chance to examine them while waiting for parcels to be tied up. As a result, a good business was done in those lines.

HALIFAX.

Halifax, N.S., March 9.—With collections fair and orders for spring goods coming in quite freely, the hardware jobbers are very hopeful for a good season's business. Prices throughout the list are steady, but some changes are expected in the near future, but they will not likely be very great. The travelers are sending in good orders for general lines. Among the articles which are expected to advance is wire fencing. The present quotations are: Twisted, plain and galvanized, $3.25 per 100 lbs.; barb, $2.90 per 100 lbs.; staples, $3 per 100-lb. keg.

Galvanized sheet iron, $4 for 24 gauge; black sheet, $2.50 for 24 gauge; bar iron, $2.20. Wire nails, base, $2.50; cut nails, $2.70 base.

Ingot tin, 32c to 34c; tin plates, I.C. coke, $3.75 to $4; I.C. charcoal, $4 to $4.50; I.X. charcoal, $5.25 to $5.50.

Sheet lead, $6 per 100 lbs., in rolls, and $6.50 in smaller quantities; pig lead, Canadian, $4.25; English, $4.50; zinc, $6.75 for cask lots, and $7.25 for smaller quantities. Raw oil is worth 62c per gallon in barrel lots, and 67c in smaller quantities. Boiled is worth 65c in barrels, and 70c in smaller lots.

Turpentine is 83c per gallon in barrel lots, and 93c for smaller lots.

* * *

The stove dealers report business fairly good for the season of the year, and the plumbers are kept pretty busy. The city of Halifax has just decided to purchase several thousand water meters, at an expenditure of $42,000. It is claimed by the meter advocates that the installation of these meters will do away, to a very large extent, with the great waste of water in this city, and that the pressure for fire purposes will be very greatly increased. There is considerable public feeling against their installation, and at a public meeting held during the week at the north end, the action of the aldermen who supported the resolution ordering the purchase of the meters was strongly condemned.

* * *

The Commercial Hockey League series is rapidly drawing to a close. The team representing the firm of A. M. Bell & Co. met its first defeat last Saturday night, when the plumbers from Farquhar Bros. downed Bell's men in overtime by the score of 5—4. Farquhar Bros.' team has gone through the league thus far without a defeat.

* * *

T. R. Prince, of Truro, is leaving for Newfoundland, where he intends to go into the lumber business on a large tract of land which he owns there. Mr. Prince says that lumbering in Nova Scotia is pretty well worked out, that labor is high, the markets low, and the stumpage expensive, but in Newfoundland there are immense possibilities in the business, and he expects, in a few years to establish a large business there and to give employment to a large number of men.

NO WOOL OVER HER EYES.

Uncle Abe, a grizzled old negro, visited a zoological garden. He stood fascinated before a cage containing a chimpanzee, and could not be induced to move. After a while the animal came to the front of the cage, and Uncle Abe spoke to him.

"Howdy ?" he said, "howdy?"

The chimpanzee not making any response, Uncle Abe chuckled and winked at him knowingly.

"Dat's right, dat de way ter do! Doan you nebber gin ter talk. Ef you does, white man put er hoe in yer han' an' meck yer wuk !"

Big Steel Plant May Locate at London—Defective Gas Mains Caused Destruction at Brantford—Many New Buildings Planned—Chatham Merchants' Timely Advertising—Barrie Hardwareman Offers Prize on Sale of Enamelware—Hamilton Schools to Be Fitted With Fire Escapes.

GOLD AND SILVER STAMPING.

By Our Special Correspondent.

Ottawa, March 12.—Two sessions ago parliament enacted a bill respecting the sale and marking of manufactures of gold and silver. The object of the measure was to make it compulsory that gold and silver manufactured in Canada should bear certain stamps, trade mark, date, and the quantity. If the manufacture was of gold the number of carats must be marked, the standard carat of course being 24. The bill was asked for by the gold and silver manufacturers of Canada, who sent a strong deputation to Ottawa in support of their views, but at the same time there was considerable opposition to the bill on the part of the retailers. There was a consensus of opinion, except on one point, as to whether such articles should be stamped and sold in Canada of a grade lower than 10 carats, and finally the majority view prevailed that it would be better not to reduce the standard below 10 carats. A protest was entered by Senator Kerr, of Toronto, against the hasty manner in which the bill was being put through the Upper House, but Mr. Scott demurred to this view, holding that the country had ample notice.

It now transpires that the various parties affected by the act, which was to have come into force on Friday of last week, are not satisfied with it, and they have asked for a number of amendments. Chief amongst these is the question as to whether the standard shall be 9 or 10 carats. The whole question is, therefore, to be reopened by parliament, in order that the manufacturers, wholesale dealers and retailers may be heard, and for this reason it has been decided to suspend the operation of the bill for twelve months so that the parties who are likely to be affected by the legislation can get together.

HAMILTON.

Hamilton, March 11.—The Gurney Scale Company last week closed a contract to build one of the biggest hopper scales ever built in Canada. The scale was ordered by Barnett & McQueen, engineers and contractors, of Minneapolis, who have the contract for erecting the new C.P.R. elevator at Fort William. It will have a capacity of 2,000 bushels of grain and will be capable of weighing 120,000 pounds. It is to be delivered in July.

* * *

There has been a slight opening in the retail hardware trade here during the past week. The weather has been inclined to be more of the spring variety and merchants report trade to be showing a slight improvement. The general complaint, however, is that accounts are being paid very slowly.

* * *

The Banewell-Hoxie Wire Fence Company has secured the contract for about 150 miles of fencing for the C.P.R. in the vicinity of Calgary.

* * *

A. E. McKinstry, general manager of the plant of the International Harvester Company, in an interview this week with your correspondent, stated that the outlook for a brisk business this year was very bright. "I am surprised at the large extent of our shipments, in view of the fact that the public is inclined to be pessimistic as to the condition of trade," he said. Mr. McKinstry said his firm had made large shipments to western Canada, Spain, Russia and Australia during the past few months and that at present the plant was preparing for one of the heaviest seasons in its history. With reference to the bearing which the French treaty will have on the firm's business, Mr. McKinstry said that while he was not particularly posted on the fine points of the treaty he expected that it would prove to be all that is expected of it in the way of providing business for the firm. He thinks it will result in a large addition to the plant, as many of the orders now handled by the Chicago works will be filled here.

* * *

The International Harvester Company has a good plan of securing business in awarding yearly prizes to the agents who sell the greatest amount of goods. Last week the prizes were awarded and Andrew Sweazy, of this city, secured the first prize of $75, and James Bowie, of Ville Marie, Quebec, and E. F. Rose, of Coldwater, Ont., were awarded second and third prizes. About $150 was divided in prize money amongst the agents.

* * *

The local board of education is seeking tenders for fire escapes and fire gongs for the schools. None of the schools here are fitted with fire escapes and it is likely that a lot of money will be spent on them this year as the result of the Collinwood school disaster.

* * *

Cyrus Birge, president of the Canada Screw Company, was married on Monday of this week at Brooklyn, N.Y., to Miss Mabel I. Sturt, of that place, and formerly of this city.

* * *

The Bell Thread Company, of Montreal, has decided to remove its plant to this city and will start operations here about April 1.

LONDON.

London, March 10.—Jobbers who are well stocked up with builders' hardware, spades and shovels are naturally by no means pleased with the recent drop in manufacturers' prices for these goods, while those who have been buying sparingly are congratulating themselves on their caution.

* * *

Wholesale and retail trade continues fair and dealers are still optimistic as to the outlook for spring business.

* * *

There is evidence of a decidedly better tone among the manufacturers at present, and with the near advent of spring many firms are increasing their staffs. It is reported that some firms are putting on new men. This is particularly noticeable in the iron trades. The Empire Brass Company is said to be increasing its force, and several other concerns contemplate doing likewise. In a month or so things should be booming again.

* * *

The board of water commissioners has awarded the contract for hardware to James Cowan & Co.; for hydrants and special castings to the London Foundry Co.; for brass to the London Brass Co.; and for rubber boots and valves to the London Engine Supply Co.

* * *

The Grand Trunk car shops have an immense amount of repair work on hand. The recent storms proved hard on rolling stock, and the consequence is the shop will be kept busy for some time.

* * *

The London Concrete Machinery Co. intends building a large addition to the factory on Rideau street, work on which will begin as soon as the snow and ice leave the ground. The new building will be 38x110 feet, two storeys high, and built entirely of cement. When the addition is completed the company will increase its staff by twenty or more men.

* * *

Among the buildings in contemplation this year is a chapel for the Sisters of St. Joseph, at Mount St. Joseph, to cost about $25,000, and for which plans are being prepared, and an addition to St. Joseph's hospital, to cost about $10,000. These and other projected buildings, including the isolation hospital, the hygienic institute, to say nothing of warehouses and private dwellings, are indications that the approaching season will be a busy one in the building trades.

* * *

Goodenough & Rhinn, of Detroit, and other capitalists, have agents in this locality looking for a location for a big steel works, employing over a thousand men. It is said London can get the concern if it goes after it in the right way, and the city will in all probability enter into negotiations with the parties.

BRANTFORD.

Brantford, March 11.—A new company, to be known as the Brantford Iron and Metal Company, has been formed to succeed the Brantford Millstock and Metal Company. The new management is now in charge and will make extensive improvements with a view to carrying on operations on an enlarged scale. The members are S. Malvedar, A. Rosenfeldt and B. Allen. A manager for the company has been secured in the person of J. Allen.

Ex-Ald. Walter R. Turnbull, of Turnbull & Cutcliffe, the well known hardware firm, was defeated in the bye-election for the city council last week. His many friends here greatly regret that he will not be at the municipal board again this year. Last year he was chairman of the fire and light committee and superintended the erection of the new fire station in the East Ward.

* * *

The city council has passed a new by-law regulating plumbing. In the past, whenever the owner of a property desired to put in plumbing, it was necessary to secure a license from the city clerk to proceed with the work. The plans were filed with that official and a license fee of $2 was exacted. Under the new by-law the license fee is abolished and the plans are to be filed with the city engineer, under whose department the work properly comes.

* * *

It is stated that in spite of the industrial depression the Buck Stove Works in this city are employing 500 hands, the largest number in their history. Every effort will be made to continue with the full staff. The trade is said to be good although the stocks are pretty heavy.

* * *

W. G. Hawthorne, who carries on a general hardware and repair business, has moved into handsome new quarters on Dalhousie street. The store is excellently equipped in every detail and a heavy stock is carried.

* * *

A feature of some local and general interest to the plumbing trade is presented here in the condition of gas mains. Of late there have been several serious gas explosions due it is alleged to leakages in the mains of the city gas company. The conditions are likely to be investigated by the authorities, as the explosions have resulted in the greatest damage to property and also to life. Last week the home of Mrs. Joseph Smith, Darling street, was completely wrecked in this manner. There were no gas connections in the house, but it appears gas leaked into the cellar from the sewer or gas main in the street. She went down cellar with a lamp and the explosion followed, blowing out the side of the house and raising the structure off its foundations. Practically all the rooms were wrecked. The woman is at the hospital and is not expected to recover, being very badly burned. The incident is of particular concern to plumbers, as in such cases the cause is often wrongly attributed to defective plumbing. The local trade may move to protect itself in this regard.

CHATHAM.

Chatham, March 10.—The anticipation is that with the coming of spring there will be a considerable awakening of business. "Prospects are bright," said one hardware merchant to The Hardware and Metal representative this afternoon.

* * *

Ald. W. H. Westman, of Westman Bros., returned last week from a five weeks' trip to the Pacific Coast, in the interests of the Chatham Malleable Iron Company. He reports the trip a very successful one. Business is quiet in the West, but the people look for good crops this year, in addition to which immigration is already beginning.

* * *

The building and plant of the Chatham Motor Car Co. were sold by auction last week, the purchaser being G. W. Cornell, dentist, of this city. The price is $11,600.

* * *

Reginald Oldershaw, of this city, has been appointed Western representative of the Canadian Jack Company, manufacturers of a patented device for raising buildings, machinery, etc. He left for the Pacific Coast last week, and will have charge of the entire territory west of Winnipeg.

* * *

Alexander McCallum, formerly of the firm of Drew & McCallum, who recently acquired the entire stock and goodwill of that firm, announces that he intends giving up business. He is conducting a big dissolution sale of the entire stock. It is understood that the other partner of the firm, Mr. Drew, intends locating in the West.

* * *

A notable instance of striking the iron while it is hot in the matter of advertising, was seen here in connection with the recent fire at Collinwood, near Cleveland, in which so many school children lost their lives. The first reports of the disaster reached here on Thursday morning of last week. In the Chatham News of the same evening, on the front page, in close proximity to the detailed accounts of the accident, appeared a large cut of one of the fire escapes recently installed by Robt. Riddell & Sons, of this city, on the Central School. The photo represented the escape crowded with children in the course of fire drill, and underneath were a few pertinent words with reference to fire escapes, which, in such connection, ought to drive home a lesson to School Boards and large employers of labor. This is certainly an example of "timeliness."

Incidentally, the recent regulation of the Education Department requiring fire escapes on all schools of two storeys or over, ought to mean a lot of business for dealers in this line. Two schools in this city are affected.

* * *

Chatham plumbers came in for some compliments at the hands of the city water commissioners last week when the licenses were renewed for the current year. One new license was granted, to Campbell & Callahan, tinsmiths, the licenses renewed being those of Westman Bros., T. W. N. Clements, James Watt & Sons, C. R. Bowers, J. C. Wanless, R. McG. Coyle, J. H. James and John McKay. The list has grown much in the last few years.

An arrangement has been arrived at between the Chatham Manufacturing Company and W. M. Drader, whereby the latter will have the use of the former company's railroad spur in connection with the box factory he proposes establishing in the near future. The new concern will be heartily welcomed here.

* * *

A Board of Trade dinner, the first of its kind in Chatham, was held on Tuesday evening, and proved a signal success. The Board was a little chary about taking it up, but the success of the affair surpassed their fondest expectations. An address was given by George C. Gibbons, K.C., of London, chairman of the International Waterways Commission, on the subject of "International Waterways." President L. A. Cornelius, of the Wolverine Brass Company, also delivered an address.

* * *

February being the shortest month of the year naturally saw less oil produced than usual, the actual production of the Tilbury East field being a trifle over 18,000 barrels, while that of Romney was 1,500 barrels. The latter showing is remarkably good. At the end of the month about 1,500 barrels were tanked in Tilbury East.

* * *

W. J. Harvey, supervisor of crude petroleum bounties for Ontario, gives the following as the production on which bounty was paid during the month: Tilbury and Romney, 25,091 barrels; Lambton, 21,963; Dutton, 1,202; Bothwell, 461; Leamington, 407. Total, 49,124 barrels.

* * *

G. D. Dobbyn, for the past 11 years located in Wheatley, has purchased a hardware business in Newbury, and intends moving to that town in a week or so. Wheatley is losing a good citizen.

* * *

Among Canadian patents recently issued is one to Fred. Bartlett, of this city, for a flexible top for salt cellars. Mr. Bartlett has sold the American rights for a good sum, and also retains a royalty on the output.

BARRIE.

Barrie, March 10.

Business has brightened up lately and sleighing through the country is again possible. Many people from the surrounding districts have been unable to get into town for three or four weeks.

* * *

The Ball Planing Co., whose factory has been closed for a couple of weeks, has again resumed operations with a full staff.

* * *

Builders are more hopeful than they were a few weeks ago, as several plans are being drawn up for private residences to be started as soon as the weather will permit.

H. H. Otton & Son this week have their window filled with enamelware. In the middle of the display is a handsome parlor lamp which will be given to the person holding the lucky number. Each purchaser of a piece of enamelware is given a coupon bearing a number. They, no doubt, will dispose of a great amount of enamelware in this way.

West of the Great Lakes

Vancouver Man Invents Sparker for Gasoline Engine—Good Spring Prospects at Saskatoon.

SASKATOON.

Saskatoon, March 7.—Winter goods, such as skates and hockey outfits, are now giving place to the more seasonable spring articles, and new stock. Horse clippers, both hand and power, have been brought forward. Asked as to whether his spring stock of goods had arrived, one hardwareman replied that it had been on the shelves since last summer. While this may be true of some lines of goods, other lines were completely cleared out, and it is anticipated that a good trade will be done this season.

* * *

Saskatoon has now been assured of a good building season this year. Within the last few days a company of local men has been organized to erect at least twenty dwelling houses. The company is known as the Saskatoon Development Company, Limited, with a capital of a hundred thousand dollars. With the location of railway shops and new station here the accommodation for employes is somewhat scarce and it is to remedy this that the new concern has been formed. The promoters estimate that fifty houses may be required before long, but sufficient capital has been arranged for to erect the first twenty. These, with other buildings in view, and more which may be expected should bring some trade to local hardwaremen.

* * *

This week the Great West Furniture Company, who stock some lines of hardware, showed a fine window of crockery. The display consisted of one hundred toilet sets in various shades, arrayed on the bottom of the window. A card with the price in large, plain figures was placed in the centre with good results. Merchants who stock crockery would do well to try this plan.

VANCOUVER.

Vancouver, March 6.—Those connected with the metal industry will be interested in the remarks of John Hussey, a steel magnate of Pittsburg, who was in Vancouver this week. He owns a large shovel plant which was merged in the big corporation. He looks for the return of good times, and bases his opinion on the revival of activity in the steel-making industry, which he says is always regarded as a barometer of general conditions throughout the country. That a marked improvement in business has taken place since the new year he considers positive in view of the enormous new orders now being given to the steel trust, orders being booked for nearly a year ahead. The demand for structural material shows that corporations and business men have nothing to fear about the future. He is also of the opinion that the iron ore output of the United States will be larger this year than ever before.

* * *

The business development of the North should take a step forward now that the agreement between the Grand Trunk Pacific and the Province of British Columbia has been concluded, and the assurance given that construction will be commenced on or before the 1st June, and carried on continuously until completion. Already there are several stores in the North, in the vicinity of the new terminus, but it is in the country along the route that great activity will be noticed. Mining men have been in there for some years past, and have gone to considerable expense to build roads and in other ways have their propositions ready for the time when the railway would come. Now that it is in prospect, for the first time since the announcement of its proposed construction, there should be things doing. There is abundance of copper and coal particularly, and it has been stated on more than one occasion by men who know that there will be a second Butte in the Bulkley Valley. It therefore behooves machinery men to keep a close tab on that part of the country, for mines will be operated on a large scale and all the concomitant industries will flourish. Settlers will be going in, and the trade should be as considerable as that of any section west of Winnipeg. There is this point against Canada, which comes up constantly in connection with the West, and that is Americans are largely in evidence, and wherever possible patronize their own concerns. Still, there is room for him, but Canadian business has to be looked after.

* * *

F. E. Davison, general manager of the Consolidated Gold Dredging Company, was in the city this week on his way north. He is shipping forty tons of material for the alteration of two dredges belonging to the company at Forty Mile, in the Yukon. He says that the company will build two more dredges next year, with a total cost of about $400,000. This concern has ground in both Canadian and American territory.

* * *

The British Columbia Marine Railway is completing arrangements for installing drydock facilities here on a large scale, in addition to its large plant at Esquimalt. The company has just purchased the goodwill and machine shop of S. Hallander, who has been here for many years and conducted a successful business. The shop will be removed to the company's site on False Creek, and several large tools will be added. A wharf is to be built, and electric motors installed, so that the efficiency will be thorough.

* * *

On the north shore of the inlet, progress is also noted. Some time ago the Wallace Shipyard Company asked the North Vancouver Council to guarantee bonds to the extent of $50,000, to be used in extensions to the plant. Now that the City Solicitor has reported that this can be done, it is probable that this assistance will be given.

* * *

Jack Cowie, of New Westminster, machine designer for the Schaake Machine Works, has designed several engines which bear his name. One of the latest of these is a gasoline engine, now manufactured exclusively by the firm, and which is largely sold. The one drawback in this, in common with almost every other gasoline engine, is the sparker, which is easily damaged, costly to renew and not altogether reliable, even at the best. The higher number of revolutions required in the marine models has not made practicable the use of points of meteor metal, such as is used in stationary and auto engines. By the invention of a new "make and break," automatically operated by the electric current, Mr. Cowie proposes to solve the difficulty. The new sparker is to be tried on a model now under construction. The "make and break" consists of a stationary plate of metal with a movable plate above it attached to a spring. The lower plate becomes magnetized and attracts the upper plate, sending a current through to the points of meteor metal, arranged as fingers, from which sparks ignite the gas. The spring on the upper plate immediately break the current. It is believed that the new attachment will permit a speed of 900 revolutions a minute. The value of the invention lies in the fact that the new sparking apparatus will be reliable, which the jump spark is not. The points will be cheap in comparison with the present sparking plugs, their diminutiveness making it easy to carry a plentiful supply, and being of metal three-sixteenths of an inch in thickness, they are practically indestructible, other than by the action of the spark. The new engine, if successful, will remove many of the trials which beset the operators of gas engines.

Making of Steel Castings

Process of Making Steel Castings as Carried on in Ontario Iron and Steel Plant at Welland—Open-Hearth Furnace Construction and Operation—Motor Driven Rolling Mills—General Description of the New Plant.

During the last five years the steel casting industry has made wonderful progress. Many machine parts and other pieces, which formerly were made of wrought iron, are now steel castings, the cost being reduced thereby. There is now a large demand for steel castings. For this reason a description of the making of steel castings, as carried on in the new plant of the Ontario Iron & Steel Co., Welland, should be of interest.

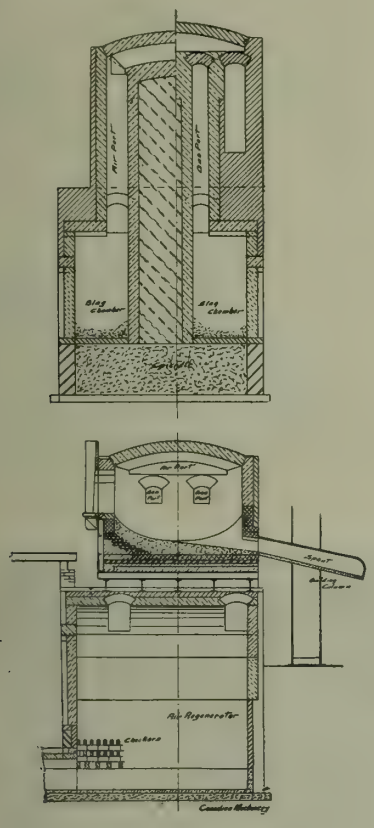

Fig. 4—Sectional View of 28-Ton Furnace.

This company, which numbers among its stockholders many of the stockholders of the Page-Hersey Pipe Co., and practically under the same management, completed their plant in Welland very recently; and, in fact, only part of the plant is yet in operation, the steel casting department. The open hearth steel billet furnace and the rolling mill have but been tested, and are not operating as yet. This plant when operating complete, will turn out all kinds of steel castings, steel billets, rails, bars and angles, and is in a position to do jobbing pattern work.

The main buildings consist of the cast house (150x165 feet), (where steel castings are made), open hearth furnace house (175x75 feet), and the rolling mill (300x100 feet). They are all steel and brick construction, the Berlin Construction Co., Berlin, Conn., being contractors and the Hamilton Bridge Works doing all the fitting.

It may be of interest to explain the significance of "basic" furnace, and to do that we will have to go somewhat into the manufacture of steel castings. There are two distinct processes of open hearth steel making, the "basic" and the "acid," the difference being in the lining of the hearth of the furnace. The "basic" is lined with magnesite, a substance known chemically as a base, which substance will not only resist the high temperatures, but is but very slightly affected by a slag highly charged with lime. The "acid" lining consists of silica sand, known chemically as an acid. In acid practice the process is practically a melting one, whereas in basic practice the melting stock is refined as well as melted by the introduction of a flux, ordinarily limestone, the function of which is to form a slag that will readily absorb the sulphur and phosphorus of the charge, and act as a vehicle for the oxidizable silicon, iron and manganese.

The chief advantage of the basic over the acid process is the flexibility of the former in the selection of melting stock. The acid process being a melting one only, the melting stock must contain the same proportion of the elements as is desired in the finished castings. But it is only in regard to quantities of sulphur and phosphorus that there exists the distinction between acid and basic melting stock. The melting stock for both processes consists of pig iron and scrap. Pig iron for ordinary and practice analysis, as follows.

Total carbon..... 2 to 3.5 per cent.
Silicon .....0.50 to 1.5 per cent.
Sulphur ... .0.04 or less
Phosphorus ... .0.04 or less
Manganese ... .0.50 to 0.75

The "basic scrap" consists of the product of rolling mills, following basic practice, and is bought on chemical specifications, but only as far as sulphur and phosphorus are concerned, the physical nature of the scrap predetermining the composition in regard to carbon, silicon and manganese. A representative analysis of this scrap is:

Sulphur ... ...$0.015 to 0.03 per cent.
Phosphorus . ..0.010 to 0.03 per cent.

Fig. 5—The Open Hearth Furnace Building.

The pig iron necessary for the basic process is "standard basic," the following analysis showing the greatest amounts of these elements allowable:

Silicon ... .1.00 per cent.
Sulphur ... .0.05 per cent.
Phosphorus ... .1.00 per cent.

The scrap used is not considered chemically, but is physically known as heavy scrap, consisting of rails, steel castings, draw bars, fish plates, etc.

The basic process needs very intelligent handling, and considerable melting skill to get good results.

Construction of the Furnaces.

The principles of construction are the same in both basic and acid practice; but there are two classes of furnaces, stationary and tilting. The furnaces in this plant are stationary. The advantages of the tilting furnace, the facility

of completely draining of the furnaces, is offset by its initial cost. Sometimes trouble is experienced in the stationary furnace because of "hard taps," caused by the material used to temporarily close the tapped hole becoming fused.

The important consideration in the furnace construction is the regenerator chambers, since they assist materially in getting fuel economy by storing up the heat from the waste gases and utilizing it to preheat the air and gas. This is done by having a double set of regenerator chambers as shown in the line illustrations, one on the left and the other on the right side of the furnace. Following the course of the air and gas from right to left, the reversing valves directs the air and gas to travel through their respective brick checkerwork chambers on the right side of the furnace, the gas igniting upon reaching the furnace body and passing over the hearth. The burnt gases pass down through the brick-checkerwork chambers on the left side of furnace, the brickwork absorbing a good deal of the otherwise waste heat. After a time (15 or 20 minutes) the valves are reversed, and the gas and air take the very opposite course, absorbing the heat from the chambers on the left side of furnace. This is the system of heat regeneration. As the heat is continued the furnace becomes hotter because of this regeneration.

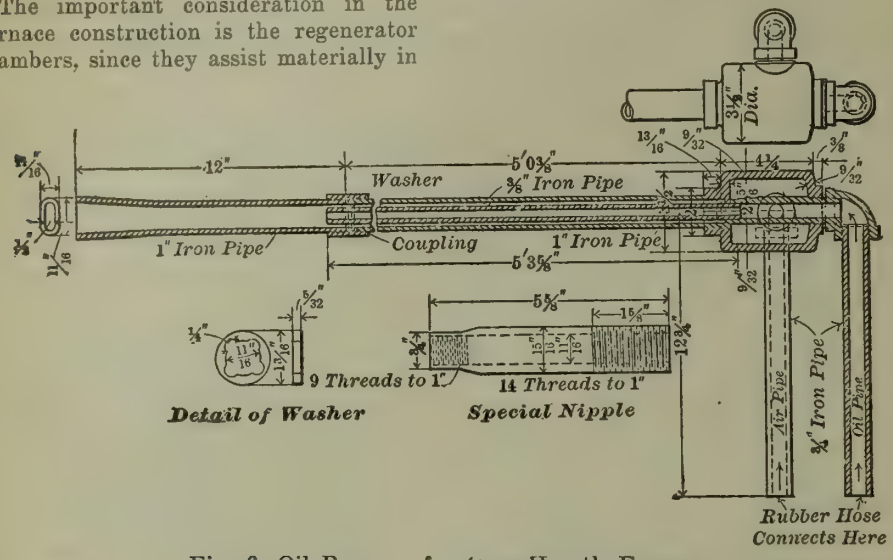

Fig. 6—Oil Burner for Open-Hearth Furnace.

Fuels Used in Welland Plant.

This plant is very advantageously situated as far as fuel is concerned. The furnaces are arranged to burn natural gas or oil fuel, and at present both are being used alternately. The company own their own gas wells, but they sometimes have trouble in getting all the gas required, and then the oil is used. The oil is stored in tanks outside the buildings, and is pumped to the burner, the style of which is shown in Fig. 6, with a steam pump made by the Union Steam Pump Co. In the burner the oil is atomized by a steam jet. Producer gas is often used as fuel in other plants, but practice so far has shown oil to be more satisfactory. Natural gas is, of course, the most satisfactory fuel, because of its cleanness and high thermal quality.

The Resulting Steel Castings.

Steel castings are now being used for so many purposes that formerly wrought iron were used for, that it would be interesting to compare cast steel with wrought iron.

Open hearth steel castings are made by pouring liquid steel of limited composition into molds of silica sand; whereas wrought iron is worked up from plastic masses of partially or completely decarbonized cast iron prepared in the puddling furnace. As far as chemical and physical qualities are concerned, there is not a great deal of difference between the two.

There is more trouble had with blow holes and shrink holes in steel castings than iron castings, chiefly because of the greater amount of shrinkage in the metal when cooling. But the chief difficulty with steel castings is their liability to crack in the mold. This is due to "red shortness." Sometimes this is due to the condition of the metal and sometimes to the improper distribution of metal in the light and heavy sections of the casting. The greater amount of shrinkage in steel castings is liable to cause cracking unless proper precaution is taken in molding.

Open-hearth Building & Rolling Mill.

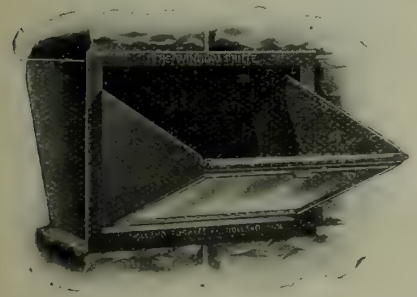
The 25-ton furnace, supplying metal for the ingots for the rolling mill has been fully described. This is situated in the open-hearth building, shown in Fig. 5. Provision has been made in this building for another furnace of the same capacity. As before stated, the rolling mill department has not commenced operations as yet, which accounts for the snow in the buildings. At B, in Fig. 5, are shown the molds for the steel ingots; and at C is one of the ladles used.

When the ingots come from the open-hearth building they are heated in the continuous heating furnace, shown at A, Fig. 7. From the furnace they are sent through the 22-inch rolling mill in the foreground of the same figure. From this mill the ingots are conveyed by means of the motor driven rollers, to the Moore & Whiting, motor driven shears where they are cut into sections and conveyed to the outside of the building, where they are piled. From here they go to the second heating furnace from which they are delivered to the 12-inch mill shown, where they are rolled into the finished product.

Fig. 7—View of Rolling Mill.

The company have 15 acres of land adjacent to the Welland Canal, having G.T.R. and Michigan Central sidings, thus having excellent shipping facilities. They have a steam locomotive for yard work.

Trade Announcements



Catalogues, booklets and other printed matter issued by manufacturers, jobbers, etc., for distribution to the retail trade will be reviewed in this department. Senders of catalogues, etc., for review should draw attention to new lines and retailers, when sending for samples, etc., should mention this paper to show that they are in the trade.

Metal Siding.

The Metal Shingle and Siding Co., Preston, Ont., have published an attractive catalogue illustrating the uses and effect of their metal building shingles and sidings. The book is tastily compiled and illustrated with half-tone engravings, which should interest dealers handling these lines. The book contains about 70 pages, and at the foot of each page appears short, though concise, testimonials from satisfied customers all over the Dominion. The catalogue is certain to interest prospective customers and will be mailed on request to dealers mentioning this paper.

New Window Chute.

Rice Lewis & Son Ltd. Toronto are introducing a window chute, the principles of which are an innovation on this market. As may be seen by the first cut appearing on this page, when open, the "window" is in every respect a chute suitable for dumping coal, vegetables,

Window Chute Open.

etc. The other cut shows the "chute" closed, serving the purposes of a window. Examination of this modern window chute shows a frame of cast iron and hopper made from heavy sheet steel which protects the glass from possible breakage by effectively covering its entire surface. When closed the hopper raises automatically and acts as an additional safeguard against possible entrance being made from the exterior of the house. Further information will be mailed on request by Rice Lewis & Son, Toronto, on mentioning this paper.

Hammers and Hatchets.

"Hammers, Hatchets, Sledges and Axes" is the title of a catalogue which has recently been circulated by the James Smart Company, Brockville. The book contains descriptions of the above company's goods and should prove useful to dealers who contemplate replenishing stocks in these lines. Each different grade of hammer is illustrated and described, weights of each are given and to show the accurate appearance of each line the cuts are made one-third actual size. The book will be sent free on request by mentioning this paper.

Summer Sporting Goods.

Wood, Vallance & Company, Hamilton, have published a new catalogue on summer sporting goods, including their revised lists of shot guns, rifles, pistols, fishing tackle, ammunition, shooting jackets, etc.

In detail the catalogue is particularly well arranged, each line of goods occupies a separate department, and cuts of the various models appear with additional written information and prices.

The fishing tackle department of the catalogue is particularly good, a wide range of goods are displayed with the aid of cuts, and a full page in color shows off trout flies in natural shades. In addition to the above lines, sporting knives, hammocks, dog collars and a varied assortment of whistles are shown.

The cover of the new catalogue is artistically printed in colors, showing two hunting scenes, which adds greatly to its attractiveness.

The book will be mailed to dealers on request by mentioning this paper, and the mass of practical information it contains should result in the supply of catalogues being soon exhausted.

CONDENSED OR "WANT" ADVERTISEMENTS.

RATES.

Two cents per word first insertion; one cent per word subsequent insertions.

Five cents additional each insertion where box number is desired.

Contractions count as one word, but five figures (as $1,000) are allowed as one word.

Cash remittances to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

RULES FOR COPY.

In addressing replies care of HARDWARE AND METAL don't fail to give box number.

Replies addressed to HARDWARE AND METAL boxes are re-mailed to advertisers every Monday, Wednesday and Friday.

Requests for classification will be followed where they do not conflict with established classified rules.

Orders should always clearly specify the number of times the advertisement is to run.

All "Want" advertisements are payable in advance.

AGENTS WANTED.

This is the problem of many manufacturers who are anxious to get a foothold in Western Canada. It will be easily solved if HARDWARE AND METAL is given the opportunity to solve it.

WANTED—Hustling agents to sell Weldarine, the only compound that will weld cast-iron, making the joints stronger than the original metal; tremendous demand. Will sell to responsible parties the rights for Ontario and Quebec. Weldarine Agency Company, D.S. Morgan Building, Buffalo, N.Y.

FIRST-CLASS English firm, manufacturing A1 line of metal polish, wishes to secure Canadian agents for Maritime Provinces, and Western Canada. Have already secured agents for Ontario, who have handled their line for nearly a year, and have found it very ready seller. For full information apply Box 690, HARDWARE AND METAL, Toronto. (4tf)

AGENCY WANTED.

AN old established British firm of glue manufacturers are desirous of arranging for representation in various parts of Canada. Correspondence to "Glue," care of HARDWARE AND METAL, 88 Fleet Street, London, E.C., England. (17f)

BUSINESSES FOR SALE.

Somewhere in Canada is a man who is looking for just such a proposition as you have to offer. Our "For Sale" department brings together buyer and seller, and enables them to do business although they may be thousands of miles apart.

FOR SALE—A good going and paying business Stock about five to six thousand. Will bear investigation. Box 700, HARDWARE AND METAL, Toronto. [10]

SHEET metal workers, now is the time to learn pattern drawing, later on you will be too busy. Let us send you and your friends full particulars and sample drawing and instructions. Address The Sheet Metal School, Galt, Ont. (14)

A growing established business in stoves, furnaces, kitchen utensils, cutlery, gas goods, tinsmithing, etc. Turnover $20,000 last year. Room for big growth as population is well over 16,000, good stand and long lease, first class stock and tools, about $6,000. Proprietor must sell as other interests are compelling. A bargain for a quick sale. Box 702, HARDWARE AND METAL, Toronto. (12)

HARDWARE stove and tinware business in one of the best manufacturing towns in Ontario. Stock about $10,000, turnover $50,000; good profits; good reasons for selling. Address Box 704, HARDWARE AND METAL, Toronto. (11)

SITUATIONS WANTED.

Travellers, clerks, or tinsmiths, wishing to secure new positions, can engage the attention of the largest number of employers in their respective lines, by giving full particulars as to qualifications, etc., under "Situations Vacant."

POSITION by hardwareman—Good general experience; best references. Box 703, HARDWARE AND METAL, Toronto. [12]

WANTED by April 1st, position as hardware clerk. Six years' experience, wholesale and retail. A1 references from present and former employers. Box 10, HARDWARE AND METAL, Union Bank Building, Winnipeg. [11]

SCOTCHMAN, open for engagement shortly, most extensive experience open fire grates and fireplaces, every type on British market. Also stoves and mantel-pieces. Accustomed to best class trade and architects' work. Accustomed also estimating and handling workmen; has knowledge also of cutlery and general hardware. Thoroughly practical and capable salesman, competent to take any responsibility; character exemplary. Box 49, HARDWARE AND METAL, 88 Fleet Street, London, Eng. (12)

BUSINESS CHANCES

A YOUNG lady bookkeeper with four years' experience in retail hardware office, open for engagement April 1st. Highest testimonials. Apply Box 705, HARDWARE AND METAL, Toronto. (13)

HARDWARE stock $8,000; annual business $25,000; price, 100 cents; good town; terms, $5,000 down. Address Box 707, HARDWARE AND METAL, Toronto. [13]

WANTED—Good live hardware business in Manitoba, Saskatchewan or Alberta. Owners only. Box 22, HARDWARE AND METAL, Winnipeg. (10)

PARTNER wanted to take half interest in hardware business. Must have some hardware experience and invest $1,500. Box 688, HARDWARE AND METAL, Toronto. (10)

MANUFACTURERS of standard reputation in hardware and metal branches, who desire to be represented by New York agent, will address "Domestic and Foreign," care of HARDWARE AND METAL, Toronto. (12)

A WHOLESALE established stove business; patent heating stoves five years on market and successful workers. Would go well with other lines. Proprietor lacks capital to push business. Patterns, stoves and material about $7,000. Would take half cash balance stock in reliable company or 75 cents on the dollar for cash sale. Full investigation solicited. Box 701, HARDWARE AND METAL, Toronto. (12)

BUSINESSES WANTED

A GOOD live hardware, stove and tin business in Ontario. Box 699, HARDWARE AND METAL, Toronto. (11)

Business for Sale

AS we intend to confine ourselves to the Wholesale Hardware business in future, we have for sale our retail general hardware business. This business has been established for over twenty years and always has been and is now a profitable one. Correspondence solicited, but as it will require $10,000 cash at least to swing the transfer, we expect evidence of your good faith when you write.

McLENNAN, McFEELY & CO.
Limited
VANCOUVER, B.C.

MANITOBA HARDWARE AND METAL MARKETS

Corrected by telegraph up to 12 noon Friday, March 13, Room 511, Union Bank Bldg, Winnipeg

Activity in the wholesale trade thi s spring is being experieneed in spite of the gloomy predictions of the pessi mists a few months ago. Spring business is proving much better than was e xpected. Except for a decline of 3 cents in linseed oil there are no quotable changes of importance this week.

Wire—Barbed wire, 100 pounds, $3.25; plain twist, $3.40; staples, $3.40; annealed wire, $2.90 base; oiled, 10c extra; bright iron, $3.10 base; brass spring wire, 32c base; plain galvanized wire, 6, 7 and 8, $3.70; No. 9, $3.25; No. 10, $3.70; No. 11, $3.80; No. 12, $3.45; No. 13, $3.55; No. 14, $4.10.

Poultry Netting—The discount is 57½ per cent.

Horseshoes—Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

Horsenails—No. 10 and larger, 22c; No. 9, 24c; No. 8, 24c; No. 7, 26c; No. 6, 28c; No. 5, 30c; No. 4, 36c per lb. Discounts; "C" brand, 40, 10, 10 and 7½ p.c.; "M.R.M." cold forged process. List Feb. 1, 1908, Capewell brand, quotations on application.

Wire Nails—$3 f.o.b. Winnipeg, and $2.55 f.o.b. Fort William.

Cut Nails—Now $3.20 per keg.

Pressed Spikes—¼ x 5 and 6, $4.75; 5-6 x 5, 6 and 7, $4.40; ⅜ x 6, 7 and 8, $4.25; 7-16 x 7 and 9, $4.15; ½ x 8, 9, 10 and 12, $4.05; ⅝ x 10 and 12, $3.90. All other lengths 25c extra, net.

Screws—Flat head, iron, bright, 80, 10, 10 and 10; round head, iron, 80; flat head, brass, 75; round head, brass, 70; coach, 65.

Nuts and Bolts—Bolts, carriage, ½ or smaller, 60 and 5 per cent.; bolts, carriage, 7-16 and up, 55; bolts, machine, ½ and under, 60 and 5; 7-16 and over, 55; bolt ends, 52½; sleigh shoe bolts, ½ and under, 55; 7-16 and over, 45; machine screws, 60; plough bolts, 50; square nuts, cases, 2½, small lots, 2¼; hexagon nuts, cases, 2½; small lots, 2¼; stone bolts, 70 and 10 per cent.

Rivets—Iron, 60 and 10 per cent.; copper. No. 7, 36½c; No. 8, 37½c; No. 9, 38c; No. 10, 40c; No. 12, 43c. Assorted, No. 8, 38½c and No. 10, 41½c.

Green Wire Cloth—$1.75 per 100 square feet.

Coil Chain—¼-in., $7.25; 5-16, $5.75; ⅜, $5.25; 7-16, $5; ½, $4.75; 9-16, $4.70; ⅝, $4.65; ¾, $4.65.

Shovels—Discounts are 40 and 5 p.c.

Harvest Tools—50, 10 and 5 p.c.

Axe Handles—Turned, s.g. hickory, $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

Axes—Bench axes, 40 and 5; broad axes, 5½ to 7½, $21.00 per dozen; 7¾ to 8½, $23.00 per dozen; Royal Oak, per doz., $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.50; Copper King, $8.25; Columbian, $9.50; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.75; Copper King, $10.50 per dozen.

Auger Bits—"Irwin" bits, 47½ per cent., and other lines, 70 and 10 per cent.

Blocks—Steel blocks, 35; wood, 60.

Hinges—Light "T" and strap, 65.

Hooks—Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

Files—Arcade, 75; Black Diamond, 60; Nicholson's, 62½ per cent.

Locks—Peterboro and Gurney 40 p.c.

Stove Pipes—6-in., per 100 feet length, $9.25; 7-in., $10.

Tinware, Etc.—Pressed, retinned, 70; pressed, plain, 75 and 2½; pieced, 25; japanned ware, 35; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; White, 70 and 5; Diamond, 50; Granite, 60 per cent.

Galvanized Ware—Pails, 37½ per cent.; other galvanized lines 33 1-3 per cent.

Solder—Quoted at 22c per lb.

Lanterns—Cold blast, per dozen, $7; coppered, $9; dash, $9.

Churns—45 and 5; list as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

Wringers—Royal Canadian, $36; B.B., $40.75 per dozen.

Lath Yarn—10½c.

Rope—Sisal, 10½c per pound, and pure manila, 14½c. British manila, 11½c.

Building Paper—Anchor, plain, 60c; tarred 62½c; Victoria plain 67½c; tarred 84c; No. 1 Cyclone, tarred, 81c; No. 1 Cyclone, plain, 66c; No. 2, Joliette, tarred, 69c; No. 2, Joliette, plain, 51c; No. 2 Sunrise, plain, 56c; Jubilee plain, 75c; Jubilee tarred, 88c; Buffalo plain, 66c; Buffalo tarred, 69c; Lion plain, 55c.

Corrugated Iron and Roofing, Etc.—Corrugated iron, 28 gauge, painted, $3; galvanized, $4.10; 26 gauge, $3.35 and $4.35. Pressed standing seamed roofing, 28 gauge, $3.45 and $4.45. Crimped roofing, 28 gauge, painted, $3.20; galvanized $4.30; 26 gauge, $3.55 and $4.55.

Ammunition, Etc.—Cartridges, rim fire, Canadian, 50 per cent.; American, 33 per cent.; pistol sizes, Canadian, 25 per cent.; American, 5 per cent.; military, Canadian, 20 per cent. off. American, 10 per cent. advance. Primers, $1.55. Loaded shells: English and Canadian makes, 12 gauge black soft, $18; 10 gauge, $22.50; 12 gauge smokeless, chilled, English, $24; Canadian, $23; 10 gauge smokeless, chilled, English, $28; Canadian, $27. Shot: Drop, per 100 lbs., $6.75; chilled, $7.15; buck, $7.55; 28 ball, $7.95. Powder: F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.

Iron and Steel—Bar Iron basis, $2.70. Swedish iron basis, $4.95; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel: Black Diamond, 100 lbs., $9.50; Jessop, $13.

Sheet Zinc—$8.50 for cask lots, and $9 for broken lots.

Pig Lead—Average price is $6.

Lead Pipe—Quoted at $7.25.

Copper—Planished copper, 29½c per pound; tinned, 26½c.

Iron Pipe—Black pipe, ¼-in., $2.70; ⅜, $2.85; ½, $3.75; ¾, $4.75; 1, $6.75; 1¼, $32.30; 1½, $40.50; 2, $46; 2½, $54. Galvanized: ¼-in., $3.65; ⅜, $3.80; ½, $4.50; ¾, $5.80; 1, $8.40; 1¼, $11.40; 1½, $13.80; 2, $18.40.

Fittings—Wrought couplings, 55 per cent.; nipples, 70 per cent.; classified malleable fittings, 25 per cent.; malleable bushings, 50 per cent.; malleable unions, 55 per cent.

Galvanized Iron—Apollo, 16-gauge, $4.15; 18 and 20, $4.40; 22 and 24, $4.65; 26, $4.65; 28, $4.50; 30-gauge or 10¾-oz., $5.20; Queen's Head, 20, $4.60, 24 and 26, $4.90; 28, $5.15.

Tin Plates—I.C. charcoal, 20x28, box, $10; IX charcoal, 20x28, $12; XXI charcoal, 20x28, 14.

Terne Plates—Quoted at $9.50.

Canada Plates—18x21, 18x24, $3.50; 20x28, $3.80; full polished, $4.30.

Lubricating Oils—600 W. cylinders, 80 cents; Maple Leaf cylinder, $1 per gal.; 700 A. cylinder, 75c; Sterling cylinder, 55c; 600 A. cylinder, 50c; Capital cylinder, 59c and 54c; Solar red engine, 32c; Atlantic red engine 29c; heavy castor, 29c; medium castor 28c; Ruddy harvester 30c; standard gas engine oil 36c; Renown engine oil, 38c.

Petroleum and Gasolene—Silver Star, in bbls., per gal., 20c; Sunlight, in bbls., per gal., 22c; per case, $2.45; Eocene, in bbls., per gal., 24c; per case, $2.60; Pennoline, in bbls., per gallon, 25c; Silver Light, 22c; Starlight, 20c per gal.; Sterling Light, 24c per gallon. Engine gasolene, in barrels, gal., 24c, f.o.b. Winnipeg, in cases, $2.60.

Bluestone—7c lb.

Paints and Oils—White lead, pure, $6.50 to $7.50, according to brand: bladder putty, in bbls., 2½c; in kegs, 2¾c; turpentine, barrel lots, Winnipeg, 77½c. Linseed oil, raw, Winnipeg, 67c; Calgary, 79c; Lethbridge, 79c; Edmonton, 80c; boiled oil, 3c per gallon advance on these prices.

ROLLING MILLS TO RESUME.

The litigation in connection with the Belleville Rolling Mills has been adjusted satisfactorily and the works will likely resume operations in the near future. The works closed down in December, but most of the 300 skilled workmen employed have remained in the city and will be on hand when the works re-open. The horseshoe plant has not been closed down.

SPECIAL AUCTIONS OF HARDWARE

In Washington, Ohio, the hardware firm of Glascock & Rothrock have introduced an innovation in special sales. They announced in February a series of auction sales. These were not closing-out sales, or sales to get rid of out-of-date, broken-lot or damaged goods, neither forced sales in order to raise needed cash, but special bargain offerings for the sole purpose of introducing to the trade some of the standard goods their various lines represent. They proposed to sell at public outcry from their regular stock, and at the purchaser's own price, some of the leaders they have been handling for years in farm machinery, etc. They offered liberal terms to purchasers at this first annual sale, and gave a guarantee.

Pflueger's Fishing Tackle

Hooks, Flies, Trolls, Spinners, Phantoms, Reels, Furnished Lines.

Everything in Fishing Tackle.

Practical Talks on Warm Air Heating

The Seventeenth of a Series of Articles by E. H. Roberts.

In the erection of a new school building one of the first things the school board should consider is the heating and ventilating apparatus. This is true not only because of the important bearing which pure, warm air has upon the health and mental vigor of the pupils, but by having the carpenter and masonry work which is required for the heating plant incorporated in the general plans and specifications this part of the work can be done with but very little additional expense.

Basement Plan.

On looking over the accompanying plans you can readily see that the brick and carpenter work must be a large item of the total cost of the heating plant and it is safe to say that if this were let separately it would cost at least double what it would if included in the general contract.

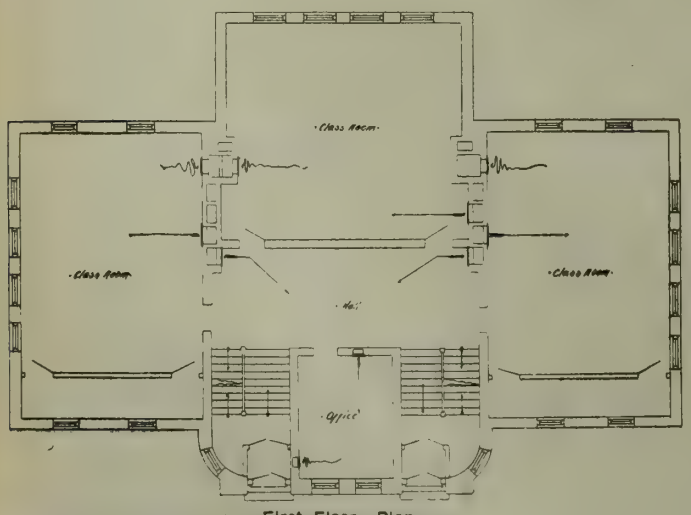
Size and Character of Building.

Now, in deciding upon the kind of heating system there are several things to be taken into consideration; first, as to the size and character of the building. A small school house conveniently arranged can be heated and ventilated satisfactorily and economically with a gravity warm air system, but it is not possible to arrange for such a system in a large building without separating the furnaces so as to get them close to the rooms with which they are to be connected, and this means a sacrifice of basement room and some inconvenience in firing.

Direct steam heat can be adapted for almost any building, but it is impossible for such a system to secure satisfactory ventilation, and for this reason a direct steam plant ought not to be considered for school house heating.

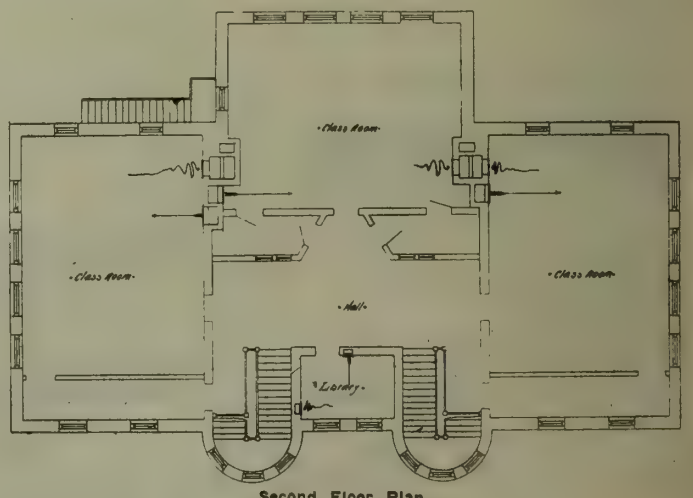
A direct indirect steam plant can be so installed as to give fairly good results so far as the ventilation is concerned, but the amount of pure air that can be furnished by this system is also quite inadequate as compared with what should and can be provided by other means.

Mechanical Heating and Ventilation.



Mechanical heating and ventilation, that is, the introduction of pure warm air and the elimination of foul air by means of fans or blowers is the only method that measures up to modern requirements so far as ventilation is concerned, and it also has the advantage of furnishing positive heat under all outside conditions.

Mechanical heat may be accomplished either by steam boilers or warm air furnaces, but warm air is less expensive to install and is fully as economical and efficient as steam in buildings of ordinary size.



In this chapter we will consider a warm air blower system using two 11-foot horizontal tubular furnaces in connection with an 80-inch three-quarter housed steel plate blower having a rated delivery of something over 9,000 cubic feet of air at 350 R.P.M., making due allowance for the resistance offered by the heaters, ducts, etc.

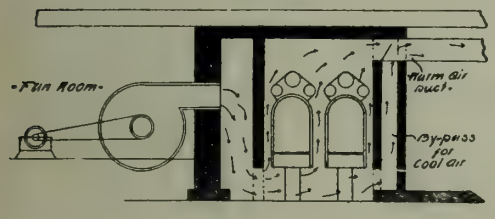
Figuring fifty scholars to a class room, this will give each pupil thirty cubic feet of fresh air per minute, which is the maximum amount considered necessary for ideal conditions, by the best authorities.

In order to control the temperature of each class room independently with-

First Floor Plan.

Second Floor Plan.

out diminishing the volume of air delivered, double acting valves are necessary with by-passes for cool air and the accompanying detail shows how these valves should be hung and also a substantial and satisfactory method of making the by-pass connections.



These valves are operated by chains connected with regulating plates in the class rooms, so that each teacher has complete control of the temperature of the air in her own room.

If the school board were willing to go to the necessary additional expense, a system of thermostatic regulation can be supplied that will automatically operate the valves so as to maintain any desired temperature in every part of the building.

Durability of Apparatus.

Now, as to the durability of a warm air apparatus such as is here shown; of course, a great deal depends upon the construction of the heaters and especially upon the amount of their radiating surfaces as compared with their grate surfaces.

The best horizontal tubular heaters have an external or radiating surface equal to about seven times the interior or heat-absorbing surface, and used in connection with a blower, which will keep the heating surfaces at a compara-

Detail Showing how Double Acting Valves Should be Hung and Method of Making Bypass Connections.

tively low temperature, they ought under ordinary conditions to last twenty-five or thirty years.

Of course, new cast liners for fire boxes may have to be supplied occasionally, but by having these so placed that there is a continual circulation of air between them and the body of the furnace these can be made to last two or three times as long as they would otherwise and this will also prevent the fire box from warping or cracking as a result of excessive heat.

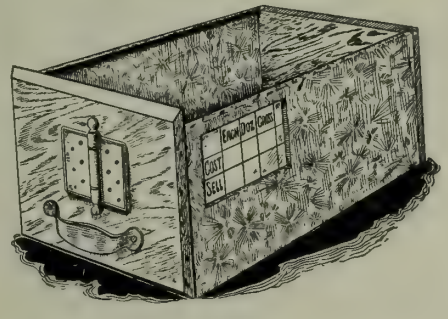
In order to operate any plant of this description economically, some means must be provided for rotating the air outside the school hours, for it would be manifestly extravagant as well as unnecessary to be taking in and warming outside cold air at the rate of several thousand feet per minute and carrying the same amount out when there were no pupils in the building.

This plan shows two large ventilating flues 40x40 inches, inside measurement, arranged with valves above the ventilating grills on second floor so that by closing these the air instead of being taken out of the building is returned from the class rooms to basement and through underground ducts to plenum room.

Why S.W.P. Gives Good Results.

Customer—"I have heard a great deal about Sherwin-Williams Paint, but do not believe it is any better than any other paint."

Reply—"There are several good reasons why S.W.P. will give the results we claim for it. One is the linseed oil used in its manufacture. There must be good linseed oil in good paint—otherwise the paint will not be good—it will not wear. It's the oil film that resists the action of sun, wind, rain and smoke. The S-W. Co. make all their own linseed oil. They use only the best Northwestern No. 1 flaxseed. They carefully reclean the seed to make sure that no foreign substances such as rape, mustard, cockle, etc., remain. They have special processes for extracting the oil at a lower temperature than is usually employed, which prevents albumen, mucilaginous matter and other substances injurious to paint from entering the oil. The result is a quality of linseed oil very much superior to the ordinary oil of commerce, from which most of the paints on the market are made."



If interested in becoming an S-W. Agent write us today.

A Shabby Salesman

belittles the merit of his product. He is actually handicapped in explaining the features of his goods—indeed, he can hardly expect to get a hearing from the man who signs the orders.

Just think over the impression made on you by a traveller when he enters your store. If he is neatly dressed, looks pleasant and appears to have confidence in his goods, the chances are he travels for a good firm, and he will get your attention.

Goods sampled on your shelf boxes are

Silent Salesmen

if they have a neat and attractive appearance, they will remind customers of many articles they had not thought of buying. Instal a good system of shelf boxes and there will be no more waste time looking for goods, no more dissatisfaction of customers who will not be promptly waited on.

The STRONGEST and NEATEST shelf box on the market is THE BENNETT STEEL HARDWARE SHELF BOX. It has galvanized steel sides and bottom, and oak fronts, hard oil finish. Having steel sides and bottom, it saves 20 per cent. shelf room over the old wooden box. Each box has a price card fitted into a depression on side, so that you can mark the cost and selling price of goods.

Amongst Hardware Salesmen

THE VALUE OF AMBITION.

The salesman who realizes the value of ambition, and at the same time tempers his knowledge with common sense, is on the highroad to success. No man, without ambition, ever bettered himself of his own good work, but ambition must be rightly applied, its controlling forces kept within certain bounds, or else the results will be disastrous. "Keep your eyes on the stars, but do not forget you are walking on the earth," was a maxim once set forth by President Roosevelt to his people, and in it he conveyed an apt warning to those whose minds, solely centred upon a certain object, gave no heed to the danger of tripping by the way.

The ambition which makes a salesman discontented with his lot; which makes him eager to step into the shoes of the man above him before he has earned the right by hard work and diligent study; which makes him, to the point of childish petulance, eager to become master of men before he is master of himself, is the ambition which carries nothing but disaster in its train. There is no royal road to success, and the man who is so anxious to manage a store, or to possess one himself, that he cannot stop to throw his heart into the work of his employer fails at the very beginning.

Duty Must Not Be Forgotten.

"I ought to be managing this department, instead of so-and-so, I am sure I am a better man than he," says the young salesman, and then he glares at the unfortunate customer, who, coming for a certain article, reminds him that for the time being, at any rate, he is not the manager. The purchaser is probably served in a surly manner, no attempt is made to show the best lines in the store, no attempt made to make a sale outside the article asked for, and the merchant is not only at a pecuniary loss, but in all probability a customer has been driven away from the store forever.

This ambitious young man, too, has no patience to pay attention to the humdrum work he may have in hand. How could he be expected to keep a bright polish on the stoves, or have the shelves in nice array, when he ought to be ordering stock and bossing the other employes! And then one day he is curtly told that his services are no longer needed, and he goes away reviling at the base ingratitude of the world in general and of employers in particular, only to repeat the same process again and again until his time is gone by, for nature is not lavish with her opportunities.

Shortsightedness of Clerks.

He never realizes that it is his own fault, that he has been left behind. He reads in this paper and in that, the value of being ambitious, and he characterizes the advice as folly, because he had been ambitious, and what had been the result. A shortsighted young man truly, but there are many more like him around us. If he could divest himself of his own self conceit; if he could understand that in looking at the stars so intently he had been tripped many times by the ground, he would see why he had failed. "Had he shown a genuine love for his work, had he done his best for his employer, whether he was in his right place or not, had he done for others what he would expect others to do for him?" Let him ask himself these questions and the conviction must come to him that he had lamentably failed from the first.

Ambition and Application.

Ambition, rightly applied, however, is the mainspring of success. Ambition should make the young salesman keenly alive to the necessity of keeping the stoves as brightly polished as human labor can make them, of having the shelves as tidy as strict attention to their order can keep them. What is worth doing, is worth doing well, and the smallest detail in store routine has its definite aim and object. It is the right ambition which makes a man anxious to do the best he can, whether he feels he is fitted for higher work or not, and to throw himself thoroughly into the task he has in hand, whether it be sweeping the floors or dressing the window. It is the right ambition which makes him give cheerful obedience and loyalty to the man above him, although he may be convinced that the relative positions ought to be reversed. His time will come all the quicker for giving this obedience and loyalty.

Must Study to Rise.

The rightly ambitious man will make a special study of all the goods he has to sell, of what material they are made and as to how they can best be applied. By this means he can talk intelligently to the customer, probably command a sale, focus the attention of those in authority upon his work, and beyond that give himself extra qualifications for the time when his advance takes place and his ambition is being realized. This is the age of specializing, therefore a complete study should be made of the science of salesmanship. Keep the eyes open. When another salesman advances a new line of argument and it appears a sound one, treasure it up for future use; do not be too superior to learn from others; diligently study all the technical papers that can be secured, and show an employer that his advice is valued, and his success an incentive. Let the salesman remember the scriptural injunction, "do unto others as you would they should do unto you," and in following it out as between employer and employe, a great pitfall will be successfully passed.

Be Earnest and Enthusiastic.

The sensibly ambitious man is earnest and enthusiastic. Earnest in making the best sales, earnest in making his window display better than the one before, earnest in his loyalty to those above him, and earnest in his desire to forge ahead. He is enthusiastic over his trade, enthusiastic over the success of his employer, and enthusiastic over the fact that he is part and parcel of a great industry. The man who is ambitious is well on the road to success, but he must trudge on alone, finding out by experience and hard knocks the right turnings to take, and reaching his goal only by laborious effort cheerfully given. The man who expects to travel the same road by means of a stage coach will encounter a breakdown before he has gone half the distance.

TRAVELERS' CONVENTION AT CALGARY.

Calgary travelers are making extensive preparations for the great gathering of commercial men from all parts of the continent, which will be held in that city in June. If the plans proposed are carried out the visitors to this convention will be given the time of their lives. That the attendance will be large seems assured. Already inquiries are being received from travelers' organizations and assurances are being given that they are planning to attend in large numbers. One such organization from North Dakota proposes to bring two coach loads of travelers and their wives, and a brass band.

WRITES LETTERS TO HIMSELF.

A certain western town has an hotel clerk who is an observer of human, or, at least, commercial traveler nature. He recently remarked to a reporter that men on the road write letters to themselves before they get to the next hotel, so they will appear important when they register and ask for their mail. The clerks soon get on to them, because they see the handwriting on the register and on the mail. "But," he added, "that isn't always the reason, and I noticed it in a man whom I finally got to know very well. He wasn't the kind of a fellow who cared about appearing 'important,' so I asked him about it. The explanation was simple. His business was such that it involved an infinity of minor details. His memory was good as to these, but it was faulty as to matters not directly pertaining to his department, so when he was in another town and recalled something he had to attend to in the next town, he would write it on a slip of paper and mail it to himself. He didn't put the memorandum in his pocket for fear he would forget about putting it there. He said he had used the plan for a long time, always writing ahead if there was something in another town he wanted to remember, and said it was the best plan he had ever figured out to keep from forgetting things."

THE WANT AD.

The want ad. has grown from a little used force in business life, into one of the great necessities of the present day.

Business men nowadays turn to the "want ad." as a matter of course for a hundred small services.

The want ad. gets work for workers and workers for work.

It gets clerks for employers and finds employers for clerks. It brings together buyer and seller, and enables them to do business, though they may be thousands of miles apart.

The "want ad." is the great force in the small affairs and incidents of daily life.

Hammer the Hammer

The Iver Johnson Safety Automatic Revolver won't go off unless you deliberately pull the trigger. Do that and you'll find it just as sure as it is safe. The straightest-shooting, hardest-hitting, most reliable revolver made to-day. Rightly proportioned, beautifully finished; a gentleman's pistol for pocket, desk or bureau.

The Iver Johnson goods are never given away as premiums. They are always sold in the regular channels. We advertise them in the big magazines and sportsmen's periodicals, but never sell one by mail where there is a dealer to supply it. And we stand back of the dealer with a guarantee. Be sure to find the owl's head on the grip and our name on the handle.

Send for Dealer's Catalogue or order of your jobber.

BUILDING AND INDUSTRIAL NEWS

For additional items see the correspondence pages. Information is solicited regarding building and industrial news, the incorporation of companies, establishment or enlargement of mills, factories or foundries, municipal water works and sewerage systems, railway or mining news, etc.

Industrial Development.

More than 200,000 tons of iron ore were mined in Ontario during 1907.

The Deseronto Iron Works, Deseronto, will shortly close down. Inability to secure charcoal is said to be the cause.

The Structural Steel Company, Montreal, has been awarded the contract for erecting the C.P.R. elevator, D, at Fort William.

The Capital Lock Nut Company, of Columbus, Ohio, will take over the plant of the Robertson Machinery Company, of Welland, and will spend $100,000 in enlarging it.

The Dominion Bridge Co., Montreal, have secured the contract for the steel super-structure of the Redwood bridge across the Red river at Winnipeg. It is expected the work will be completed by next fall.

The British-Canadian Smelters Limited, Toronto, have decided to locate its large plant at Chippewa. The site is on the Niagara river and vessels having a 25-foot draught will be able to load. The company will employ 500 men and put up a plant for the treatment of metalliferous wastes, ore and bullion.

The Montreal Board of Trade has joined the ranks of those seeking a diminution of the commercial taxes levied by the Quebec Government. At a meeting of the council the Provincial Legislation committee was authorized to make representations to the Cabinet that commercial corporations are now excessively taxed, and that a reduction is desirable.

At the annual meeting of the Montreal Steel Works, Limited, K. L. Blackwell, the president, said that the business of the company was quite satisfactory. Trade at the present time was on the quiet side, but every indication pointed to a resumption of renewed activities. The report for the year was adopted. The following officers were elected: President, K. W. Blackwell; 1st vice-president, James R. Wilson; 2nd vice-president, C. R. Godfrey; directors, R. M. Paterson and W. F. Angus, Montreal; Charles Scott, in Philadelphia.

Companies Incorporated.

The Canadian Stewart Company has been incorporated, with headquarters at Montreal, to manufacture hardware, engine boilers, machinery and farm implements. The company has an authorized capital of $100,000.

The Toronto Indestructible Brick Co., Limited, has been incorporated, with a capital of $100,000, to manufacture brick and to do business as building contractors. The head office of the company will be at Toronto, and the provisional directors are, Arthur Cohen, Charles F. Ritchie, A. G. Parish, all of Toronto.

The Brandon Fire Engine Co., Brandon, Man., have been incorporated, with a capital of $60,000, to manufacture fire extinguishers, engines, hose, hose wagons, reels, hydraulic pumps, machinery, fire escapes, iron fencing, etc. The provisional directors named are, J. Empey, J. Burchell and R. Sword, Brandon, Man.

Building Notes.

Richard Bowman, Vancouver, B. C., will erect a brick warehouse this spring at a cost of $18,000.

The Moresly Island Lumber Company, Vancouver, will shortly commence work on the construction of a $350,000 sawmill.

Tenders are being called for the erection of public buildings at Renfrew, including a post office, customs office and weights and measures departments.

The Builders' and Contractors' exhibition, which is to be held in Montreal in April, promises to be one of the most successful of the Canadian trade expositions that have been held. The following Montreal firms have already agreed to exhibit: E. Cavanagh Co., hardware merchants; Joseph Laurier, plumber; Dominion Oil Cloth Co.; Lacroix and Leger, hardware; Lockerby & McComb, manufacturers of tarred paper; Warden King Co., manufacturers of boilers and steam fittings; Pedlar People, metal roofing; Clinton Fireproof Co.; Laprairie Brick Co., Ltd.; Montreal Terra Cotta Brick Co.; Francis Hyde & Co., drain pipes and cement; Hyde & Webster, drain pipes and cement; T. A. Morrison & Co., agents for brick, stone and machinery. The Master Painters' Association will supervise the exhibits connected with its trade, as will the Master Plumbers' Association the display in its department. During the show week the convention of the National Builders' Association is to be held, to which many who are interested in the exhibition will be drawn.

Mining Notes.

For the month just closed something like a record has been made in the output of the collieries of the Nova Scotia Steel and Coal Company, as well at the blast furnace. No less than 50,760 tons of coal were taken out, compared with 42,500 for the same month last year.

The annual meeting of the shareholders of the Intercolonial Coal Mining Co. was held in Montreal. The output of coal and coke for 1907 amounted to 317,599 tons. James P. Cleghorn was re-elected president; D. Forbes Angus, re-elected vice-president and managing director, and W. M. Ramsay, A. W. Hooper, R. MacD. Patterson, K. W. Blackwell, E. Goff Penny, directors. C. A. Dowd was appointed secretary-treasurer.

For the first time since the inception of the famous litigation between the Dominion Steel Company, and the Dominion Coal Company, James Ross, the president of the Coal Company, at the annual meeting of the shareholders held in Montreal, made a public statement on the case. In it, Mr. Ross claimed that as the Coal Company went to the assistance of the Steel Company when otherwise that company would have gone to the wall, the Coal Company had a right to expect fair treatment in regard to the coal supply, which they had not received. While the directors and himself were certain of the justice of their cause, and that while legal advice supported their views, they were unwilling to continue a costly and unprofitable law struggle any longer than could be helped, and they were willing at any time to discuss, in a friendly manner, any fair solution of the differences that had arisen between the two companies. Mr. Ross added that he considered the position of the Dominion Coal Company a just one, and expressed a hopeful view of the appeal to the Privy Council. The former board was elected, with the addition of Graham Fraser, who was one of the creators of the Nova Scotia Steel Company, which at its inception was known as the Nova Scotia Forge Company, and later as the New Glasgow Iron and Coal Company. Mr. Fraser subsequently joined the Dominion Steel Company as director of works, but not long after resigned.

Railway Construction.

The contract for the construction of the C.N.R. at Rapid City, Man., has been let, the successful tenderer being the Cavan Construction Company. Work will be commenced about May 1.

Municipal Undertakings.

Minnedosa, Man., expects soon to have a waterworks and power system combined, and an electric plant of not less than 600 h.p. may be erected in the near future.

Portage la Prairie, Man., has decided to proceed with the proposed auxiliary system of waterworks, according to plans drawn up by Engineer Chipman, of Toronto.

NOVEL PRIZE OFFER.

Some nights ago, the Hinde Hardware Co., of Riverside, California, sent up a large illuminated paper balloon from the roof of their store building. Attached to this was an order on the company for five dollars in gold to be awarded to the finder. The young man who claimed the prize, decided he would prefer five dollars' worth of housefurnishing goods to the cash; and a blushing young woman who accompanied him, applauded.

TOOLS FOR THE BOYS.

The Griffin Hardware Co., Eugene, Oregon, has hit upon a plan to enlist young America in its behalf. It has offered as a prize to the school boy who builds the best bird house in the competition that is now going on a set of tools consisting of the following pieces: 1 handsaw, 1 hammer, 1 ratchet brace, 1 gimlet bit, 1 each ¼, ⅜, ½, ⅝, ¾-inch bits, 1 hand axe, ½-inch wrench, 1 No. 84 rule, 1 set awls and tools, 1 6-inch pliers, 1 5-inch screwdriver, 1 level, 1 No. 110 block plane, 1 oil stone, 1 carpenter's pencil, 1 carpenter's apron, 1 No. 14 steel square, 1 ¾-inch chisel, 1 1¼-inch butt chisel, 1 try and miter square. The tools were placed on display in a window of the store, and the latest reports from the coast were to the effect that enough houses were being erected to shelter all the birds of Oregon.

News of the Paint Trade

QUALITY IS FIRST.

Here's an important point for the paint retailer to bear in mind and tell the customer who harps on price. The value of a paint is not its price per gallon or pound, but the length of time it lasts and looks well. Figure the cost per year of keeping the house well painted, not the cost per gallon. Don't be weak on the price proposition, it's really a secondary consideration. "Quality is remembered long after price is forgotten."

The true test of paint value is service. The conditions, physical, chemical and technical, governing the behavior of paint in any given case are so numerous and so obscure that it is hopeless for any one but an expert to attempt to comprehend them.

House paint is designed to cover a wide range of conditions and the better grades of prepared paints meet the average conditions with remarkable success. As between the many competing products, naturally, it is to the record of success rather than the composition of the paints that the consumer must look for enlightenment. There is always a reason—usually there are many reasons why a certain paint under certain conditions meets or fails to meet the requirements; but these reasons are usually obscure and technical and quite beyond the range of common knowledge.

It may be taken as axiomatic that no paint obtains permanent popularity except on the basis of substantial merit. Success begets success, and nothing could be more conducive to increased sale of a given paint in any locality than the ocular demonstration of its value on painted buildings.

It is this practical demonstration of superior convenience, economy and durability which has caused the consumption of prepared paint to expand from the humble beginnings of the industry in the late fifties, to its vast proportions of the present day.

AN EDISON WATERPROOF PAINT.

It is reported that Thomas A. Edison has overcome a sanitary objection to his cement houses by producing a paint which will be waterproof and will render cement walls impervious to moisture. Mr. Edison's proposed structures have been criticized on the ground that cement walls absorb moisture and the health of the occupants would be endangered by dampness. In cement work there is a chemical action which continues after it has set. This action destroys the color effect of ordinary paints, giving a wall a blotchy appearance and causing the paint to fall off in scales. Mr. Edison is satisfied that his new paint is not only absolutely waterproof but that it will adhere to cement walls as well as ordinary paints do to wood.

Floorglaze Enamel

We say it is the best solid color floor finish made. We can prove it, and so can you, in the easiest and most profitable way possible. Stock a sample order, and see how it brings the customer back for more. and do not forget the satisfied customer has lots of friends.

Paint and Oil Markets

MONTREAL.

Montreal, March 13.—Shipments are being made as fast as teams can be procured, having in view the bad state of the roads which are in that discouraging condition generally known as between sleighing and wheeling. There is a splendid call for liquid paints, enamels, stain, and prepared coach and carriage colors.

Turpentine—Turpentine has a fluctuating tendency characteristic of the article at this time of the year. Quotations have been eased off 3c per gallon, and now stand at 72c for single barrels.

Linseed Oil—Supplies seem to be fairly abundant, and large holders are anxious to keep their stocks turned over. Quotations have been eased off 1c per gallon. We now quote: Raw, 1 to 4 barrels, 55c; 5 to 9 barrels, 54c; boiled, 1 to 4 barrels, 58c; 5 to 9 barrels, 57c.

Ground White Lead—Most encouraging reports have been received from the grinders regarding shipments of ground white lead. Stocks which were very heavy are now being rapidly reduced, and the mills seem to be working at good pressure. We quote: Government standard, $6; No, 1, $5.75.

Red Lead—The lower quotations mentioned in our last issue have stimulated purchases, and large lots have been placed at very close margins. No holders of staples seem to care to warehouse lead products longer than is necessary to make a turnover at a slight profit, but for ordinary lots we still repeat: Genuine red lead, in casks, $5.50; in 100-lb. kegs, $5.75; in less quantities at $6.50 per 100 lbs.; No. 1 red lead, casks, $5.25; kegs, $5.50, and smaller quantities, $6.25.

White Zinc—It is rumored that Old Country supplies are being cornered with a view to securing a better profit out of the article. Local supplies, however, have not felt the strengthening movement, and we quote: V.M. Red Seal, 7½c; Red Seal, 7c; French V.M., 6c.; Lehigh, 5c. White zinc ground in oil we still quote at: Pure, 8½c; No. 1, 7c; No. 2, 5¾c.

Colors—Gold, ochre, vermilion and window blind greens are feeling the spring movement, and form a large percentage of paint and color shipments. No material change has been made in the price of these articles. The outlook seems to be most encouraging.

Varnishes—Varnishes for furniture and indoor work are being called for, but carriage varnishes seem to be in less demand than formerly. The hardware trade reports increasing call for varnishes, stains, and enamels, in small tins, and are buying fair requirements in these lines.

Putty—Putty continues quiet, and prices are unchanged: Pure linseed oil putty, bulk, 800-lb. casks, $1.75; in 25-lb. iron drums, $2.05; in 25-lb. tins (3 in a case) $2.15; bladder putty, in barels, $1.95.

TORONTO.

Toronto, March 11.—Shipping is not far advanced at this centre, but booking has improved to a great extent. Ready mixed paints are beginning to move with the usual spring activity and though factories throughout the country manufacturing furniture, carriages, etc., are generally working full time again the demand for varnishes is still a little behindhand. With a good call for ready mixed paints, colors, and the various paint bases, business is again on a thoroughly satisfactory footing.

Turpentine—Turpentine is still being handled sparingly by the jobbers, it showing a marked tendency to remain unsettled in price. There are only small stocks in Toronto at present and at Savannah there is also a marked scarcity in stocks for immediate shipment. There seems a possibility of orders at Savannah being held back for some days on this account. The price has, however, eased to the extent of 2c during the week. We now quote single barrels at 73c and 2 to 4 barrels at 72c.

Linseed Oil—While there has been a slight decline on the British market, the oil would prove too high for importation at this centre. The general price for Ontario oil remains at 60c, but representatives of outside crushers are quoting as low as 57c, but this price is considered very low for pure oil at this season and is a direct result of competition. For boiled oil add 3c to these figures. Shipments f.o.b. Toronto, Hamilton, London, Guelph and Montreal. Terms net, 30 days.

White Lead—Shipping will be well under way by the middle of the month, the demand can be described as strong and prices remain firm. We continue to quote: Pure (Government seal), $6.25; and No. 1, $6.

Red Lead—As predicted, the slight reduction quoted last week has helped booking; which has at last assumed good spring proportions. Orders are substantial and continue to improve. We quote: Genuine in 100-lb. kegs, $5.75; genuine, in 560-lb. casks, $5.25; No. 1, $5.

Petroleum—The demand has been strong fro this commodity for some months, and at present shows no signs of dropping off. Quotations remain:—Pratt's astral, 17½c; water white, 15c, and prime white, 13½c.

Glass and Putty—The demand for glass and putty has increased in a substantial manner, having experienced the general feeling of activity felt on all lines which make up this market. Prices are firm and unchanged.

Varnish—Varnishes, stains, etc., used for interior house decoration, are moving freely, and a noticeable increase has occurred on furniture varnishes and enamels. We quote; No. 1 furniture, in barrels, 65c; elastic oak, in barrels, $1.25; light hard oak, in barrels, $1.05.

Shellac—General market conditions govern this commodity, which is experiencing a constantly increasing demand. We quote: Pure white, in 5-gal. lots, $2.25 to $2.50; pure orange, $2 to $2.15, and No. 1 orange, $1.90.

MENZIE COMPANY WINDING-UP.

For some months negotiations have been pending between the Menzie Wall Paper Co., Limited, whose mills are situated in New Toronto, with offices at 98 King Street west, Toronto and the Reg. N. Boxer Co., Limited, Montreal, resulting in the leasing of the

To Cement and Concrete Users

"Esco" waterproofing is a colorless liquid which, when applied to exterior or interior surfaces of concrete walls, absolutely waterproofs them and prevents any absorption of water, also saltsproofs them, so they will not discolor or streak.

Cement building blocks treated with "Esco" can be so waterproofed that they will not absorb any moisture. Only one coating of "Esco" is necessary to get results, and one gallon covers one hundred and twenty-five feet of surface.

Eight hours will dry it.

P. D. DODS & COMPANY

Montreal

Menzie plant to the Boxer Co. One of the conditions of the arrangement is the retiring from business of the Menzie Wall Paper Co., and as a best means of accomplishing this and winding up its affairs, the Menzie Co. have taken advantage of the Ontario Companies Act, providing for voluntary liquidation.

At the meeting of shareholders, held this week Thomas W. Horn was appointed liquidator. The liquidator wil call a meeting of creditors at the earliest possible date, when a statement of the company's affairs will be submitted, which statement, it is expected, will show ample assets to cover all liabilities, and protect the shareholders as well.

Until the liquidator can dispose of the large stock of manufactured wall paper now on hand, and have the books audited, no exact figures can be ascertained. The Bank of Nova Scotia are the chief creditors, but their account is secured. The other creditors consist of supply accounts for raw material used in the manufacture of wall paper.

The Reg. N. Boxer Co., who have taken over the Menzie plant, are remodelling the mill and equipping the plant for the manufacture of high-grade paper, using almost entirely English and foreign designs.

IMPROVED WATER PAINT.

An English decorator claims to have invented a distemper composition which is a great improvement over others in use. This is as follows: Carbonate of lime, glue, linseed oil, oak varnish and color, or some of them are heated with a suitable quantity of water and mixed with a disinfectant such as carbolic or cresylic acid. To this mixture is added chronic acid, bichromate of soda or potash, and further there is added boracic acid or borate of soda, or some other suitable salt for producing fireproof effects, the combination resulting in a fireproof washable distemper. The mass is made to the consistency of stiff paint, the borate of soda being greatly in excess of the quantity soluble in the water already used.

ENAMEL PAINTS.

For the white enamel paints, zinc white, lithopone and sometimes white lead are used; the latter not often because it causes a yellowish tinge to appear after a while. As much as 50 per cent. of zinc white is used to heighten the opacity. For the various colors all the earth and mineral paints are used. The kinds most in use are, in addition to the earth colors, chrome yellow, chrome green, zinc green, Parisian blue, steel blue, ultramarine and imitations of cinnabar (vermilion.) The grinding is done by mixing the pigment thoroughly with the binding agent in a sheet metal vessel, and grinding two or three times in a roller grinding machine. The process requires the greatest care, for a varnish paint which is not ground fine enough settles to the bottom very soon, which is not desirable. Enamel paints prepared by the above method are excellent for painted surfaces which are to be exposed to the weather, such as windows, doors, wagons, railway carriages, bridges, etc. They are also equally suitable for interior painting of bathrooms, hospitals, kitchens, etc. The paint can be washed with soap and a soft brush, a desirable property from a hygienic point of view.

SUGGESTIONS THAT HELP SELL.

Dissatisfied customers have made the need of high grade paint felt and though some popular brands of paint undoubtedly reach a higher degree of purity than others, the paint that has a good name—a brand that is well known—is the one to handle.

Styles for house decorations have changed greatly during the past few years, and the house that is painted in an up-to-date fashion this year will be done in four or more colors and in many cases the results will prove a sharp contrast to the popular greys, blues and browns of the past.

To thoroughly satisfy a customer who is purchasing paint for his house, explain to him that dark colors should be selected only for a large house that stands out in the open, while lighter colors or tints should be chosen for houses that stand among trees or which are not over large. A house looks larger when painted in light colors than when dark colors are used. This is a point that should always be remembered, for most persons experience a keen feeling of disappointment if their house appears small, while if it can be made to look larger than it is, they are more than satisfied."

PAINT FOR SHIPS.

R. Brownjohn, Glamorgan, England, has invented a paint which he claims will fill a long felt need in marine circles. The paint is black and is adaptable for ships' bunkers, boiler rooms, holds, tanks, tops and general iron work in ships or boiler rooms. It is claimed for the paint that its use will prevent corrosion of the metal and in addition it is non-inflammable, thereby removing all risks from fire during and after application. The paint is said to dry quicker than ordinary varieties in use at present and dries with a bright gloss like enamel.

The ingredients of the paint and the proportions in which they are mixed are as follows: Each gallon contains ½-gal. black naphtha, 5 lbs. pitch, and ½-lb. black lead. The pitch, previously crushed to powder, is intimately mixed with the black naphtha and dissolved therein; the black lead is then added, and the whole stirred together until the solution or mechanical mixture is of a homogeneous nature.

A JUSTIFIED COMPLAINT.

The manager of a house that does a large mail order business was speaking of the checks applied to keep a correct run of the business, and prevent errors. "They will creep in, despite all that," he said. "The other day we received a complaint from a customer that seemed to be justified. 'I ordered a windmill.' he wrote, 'and you have sent me a stomach pump.' "

Mistakes and Neglected Opportunities

MATERIALLY REDUCE THE PROFITS OF EVERY BUSINESS

Mistakes are sometimes excusable but there is no reason why you should not handle Paterson's Wire Edged Ready Roofing, Building Papers and Roofing Felts. A consumer who has once used Paterson's "Red Star" "Anchor" and "O.K." Brands won't take any other kind without a lot of coaxing, and that means loss of time and popularity to you.

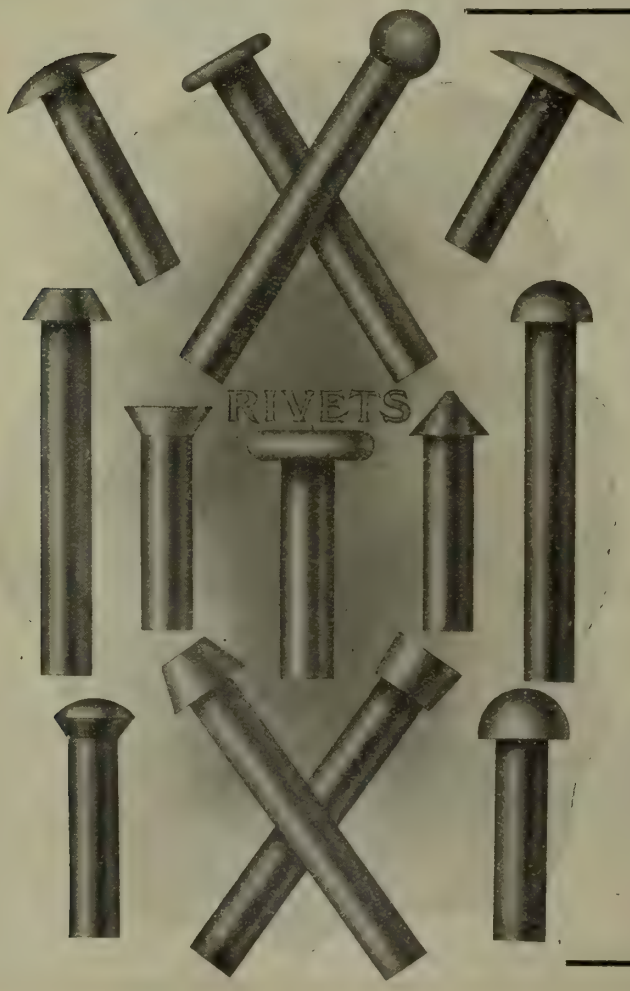
"Seeing is Believing"



¶ As the Ross Sporting Rifle represents the best in modern rifle manufacture, the highest grade materials and minute accuracy in workmanship, it is to your interest to learn fully about this Canadian Rifle—

¶ The Ross Straight Pull 303 Sporting Model M is one of our leaders to retail at $26. The barrel is the celebrated Ross high pressure, non-fouling, gun-barrel steel — The breech action is dependable.

Our representatives are now demonstrating the merits of this rifle—It places you under no obligation to drop us a line to make sure you will be on their calling list.

Our advertising policy is co-operative.

ADVERTISEMENTS WE LIKE TO LOSE

Most firms dislike losing business. It usually means the customer is dissatisfied and that is a serious matter. We have just received a letter, however, which is an

EXCEPTION TO THE RULE

R. H. Tetlock, of Unionville, Ont., sent us the following advertisement :

> FIRST-CLASS set of tinners' tools complete with benches, cheap if sold at once. For particulars write Box 54, Unionville.

He instructed us to insert it four times. After three insertions he wrote us as follows, under date of Feb. 4, 1908 :

> "Please discontinue my ad., 'Tinsmiths' Tools for Sale,' as I have sold satisfactorily, through the assistance of your valuable paper."

The advertisement cost 80 cents for the three insertions.

Surely it was a good investment.

Covertite Roofing

A Reliable Roofing Sold by A Reliable House

A Few Covertite Reasons

Made by a pioneer manufacturer and used for years in all climates.

Contains no tar, cheap asphalt, or other volatile materials that are absorbed by the sun's heat leaving the roofing dead and leaky.

Constructed with view of maximum efficiency for minimum weight. Consequently freight is less and rolls are easily handled.

Heavy roofings having gravel and sand surfaces necessitate large freight, difficult handling, and are less efficient.

Other roofings dry out and deteriorate by standing in stock—ten years standing would not injure ***COVERTITE!***

COVERTITE ROOFING comes already coated and ready to lay—each roll contains nails, caps, and liquid cement for putting it on. Many other roofings have to be coated after put on a dirty operation for the user, also trouble for the dealer to measure out the coating, nails, etc. Covertite has no odor.

Presents an attractive slate colored appearance and when old can be painted in some color harmonizing with surroundings.

Can you improve the appearance of a tar or graveled roof by painting them in some color? Emphatically NO! They will not take a color paint and deteriorate in appearance from the time they are put on.

Covertite is the best roofing on earth for the dealer to handle.

We are putting it out at prices permitting of a small profit so that it can be handled by the dealer in place of even the ordinary tar roofing. What an advantage to the dealer selling Covertite!

READY SALES! ***GOOD PROFITS!*** ***SATISFIED CUSTOMERS!***

Over A Million Feet already used in Ontario and Quebec.

THE "CROWN" SAD IRON HEATER

Do not overlook this specialty, it makes a fine combination with an oil stove for summer ironing.

Made of heavy black iron and furnished with strong bail handle for convenience in use.

It keeps the irons always bright and clean and also forms a good receptacle to keep them in when not in use.

Can be used with equal Success on
GAS, OIL or COAL STOVES

Holds a full set of Mrs. Potts or Asbestos Sad Irons at one time. It heats the irons quickly and thus saves both time and fuel.

Are you acquainted with this line? **It's an excellent seller.**

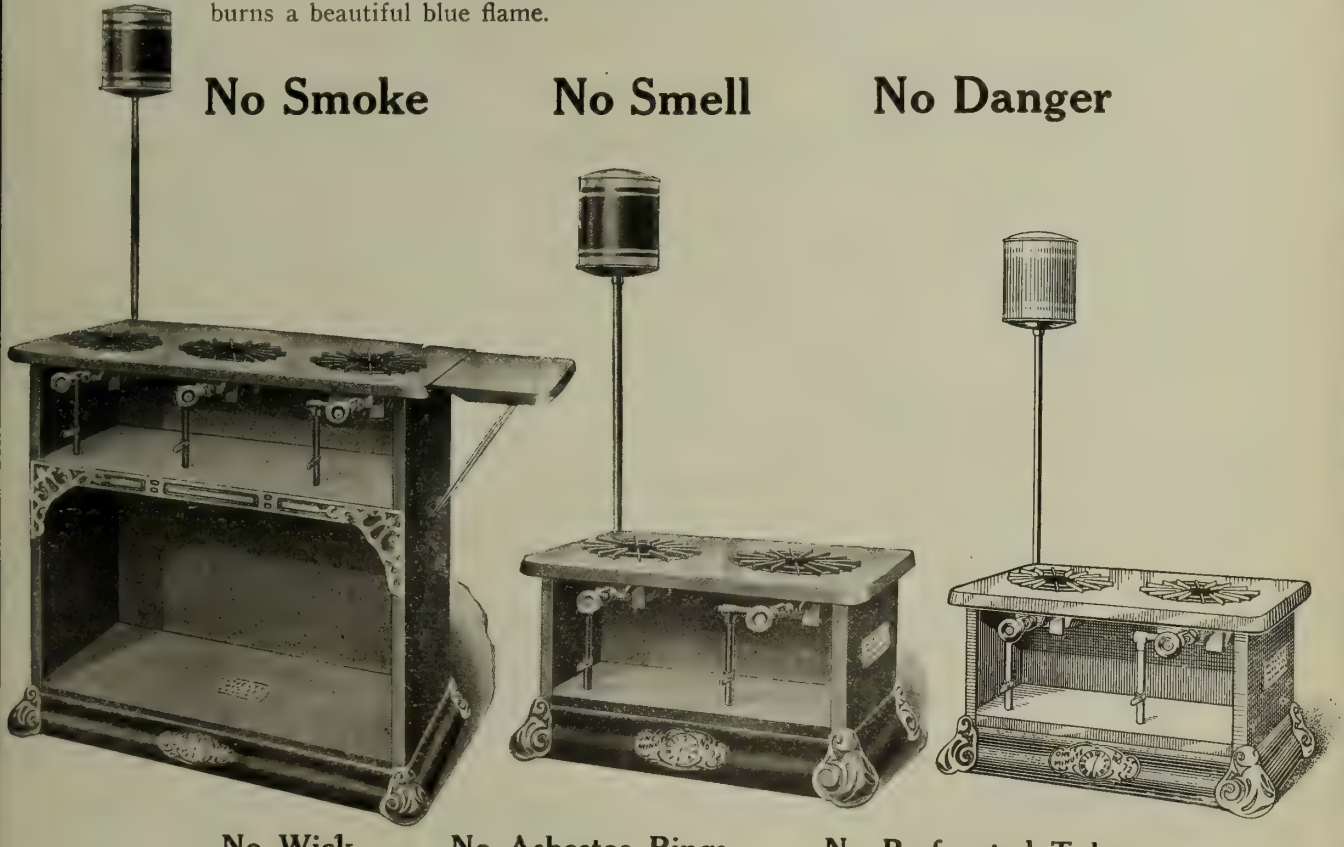
THE THOS. DAVIDSON MFG. CO., LTD.

MONTREAL and WINNIPEG

HERE IT IS



The long-expressed hope is now a practical success; the long-coveted article is here, and in every way is meeting all expectations—delivering every claim.

One Minute Blue Flame Oil Cook Stove

Made in several sizes—1, 2 and 3 burners—high and low design.

A kerosene oil Cook Stove that can be lighted and brought to full heat in *one minute*. It can be burned one hour, or one day, and extinguished in *one second*—all this without odor. A stove that burns a beautiful blue flame.

No Smoke **No Smell** **No Danger**

No Wick **No Asbestos Rings** **No Perforated Tubes**

And without any of the perplexities or troubles so common in blue flame stoves.

Simple as a gas range, but more convenient—a much hotter flame.

Safer than gasoline, more powerful than either gasoline or alcohol, and the cheapest operating stove in the world. With ordinary usage must last for years. Sells at sight. We tell you it's the wonder of the day, and your trade is going to ask for it, and take nothing else. Every woman wants the *ONE MINUTE OIL COOK STOVE.*

The demand for it is beyond the present factory capacity. Send us your order for samples. Will make shipment at earliest possible date.

Do You Realize the Great Importance of

Quick Shipments ?

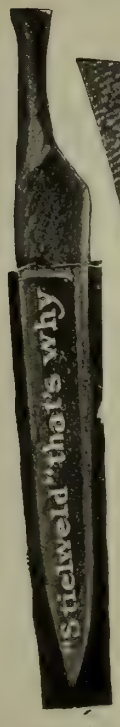
Whether you are a hardware dealer or a manufacturer, you know how annoying it is to have to wait a long time for goods that you want "right away." You know that very often

Delayed Shipments Mean Lost Orders

That's just why it will pay you to place your orders with us. We never keep you waiting. We have

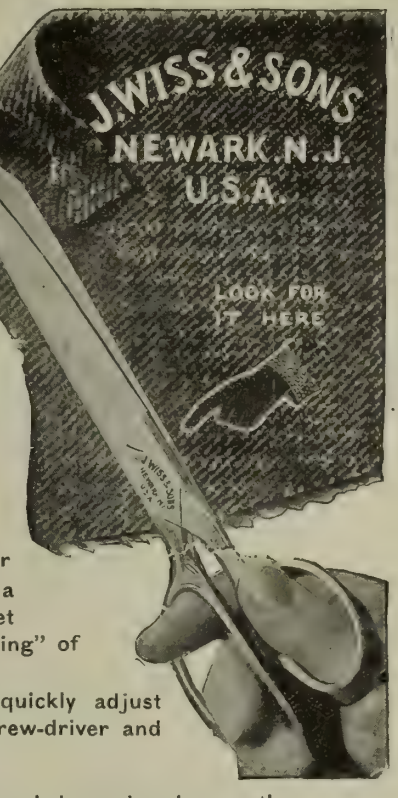
A Million Dollars' Worth

of stock to draw from, embracing almost everything in the line of



Hardware, Mill and Factory Supplies

Being only a mile or so away from the great sources of supply in Detroit, Mich., our buyer calls there every day making selections. Whenever you get an inquiry for anything in hardware, mill or factory supplies, don't turn it down because you haven't it in stock. Take the order—then write us for it. We ship orders the day after they are received—very often on the same day—and our



Prices are the Closest Obtainable.

The Walkerville Hardware Co.

Walkerville, - Ontario

WISS

"Stielweld"
TAILOR SHEARS
WITH
Simplex Shear Bolt

The peculiar construction of the Wiss Shear Blades makes the cutting edges come together in a perfectly straight line, and the blades thus meet one another without the usual "gnawing and grinding" of the one edge upon the other.

The Simplex Bolt enables the operator to quickly adjust the shears to work looser or tighter by the use of an ordinary small screw-driver and a slight turn of the nut.

The shears can be easily taken apart.

The bolt when taken out of the shear consists of only two parts and can only be replaced correctly.

No springs, no levers or other parts to be lost or become out of order.

The bolt is so simple and practical in construction that it at once receives the endorsement of all mechanics and tailors who see it.

This improved bolt and the "Stielweld" process, which give Wiss Shears and Scissors their wonderful cutting properties, make them the most popular with tailors throughout the world.

Wiss Shears are no higher in price than the ordinary shears of the same size and general appearance.

Established WISS 1848

FROTHINGHAM & WORKMAN, Ltd.

WHOLESALE HARDWARE AND IRON MERCHANTS

MONTREAL, - CANADA

The Blacksmith's Trade

is yours if you look after it. If you don't attend to it the other fellow will get it.

If a blacksmith is a wide-awake man you should have little difficulty in selling him a No. 200 Buffalo geared hand blower. Sell one to your first blacksmith customer, and his competitor will want one too. He will have to have one to keep pace with his rival. No machine of modern invention has done more towards making blacksmithing profitable than Buffalo geared blowers. They are rapidly driving out the old leather bellows. You ought to have one of these blowers on your display floor. The cost is not much, and it will not be long before you will realize a profit.

The No. 650 forge with No. 200 Buffalo geared blower attached will do the work of any ordinary blacksmith shop. It saves all the trouble of building a brick hearth. It is simple and powerful, with all the moving parts enclosed in a dust-proof casing. Light and graceful in design and fitted with the folding work support and half hood. The blower has a powerful blast, and will produce a welding heat on 3-in. iron in 5 minutes, or on 4-in. iron in 10 minutes. It is exactly the forge for country and town blacksmith shops.

We will send you a catalogue showing our full line if you desire.

QUEBEC. FRASERVILLE.

A piece of furniture as spotless outside and inside as the driven snow. A handsome piece of furniture which the housewife wants as soon as she sees it.

Every Woman Wants It.

The success of the century. People appreciate merit. The demand of the past two years were but "ripples on the beach" compared to the tidal wave of orders rolling in this year for the

White Frost Refrigerators

The **one** and **only** one Refrigerator that is sanitary in every respect. Clean, sweet, pure refrigeration means wholesome food.

It is a metallic Refrigerator, made entirely of galvanized sheet steel with solid brass trimmings—cannot shrink, swell, warp or decay. There is not a bit of wood as large as a tooth-pick connected with it in any manner.

It is coated with white enamel inside and out (excepting ice chamber.) After it has been coated with white enamel, it is placed in an oven of high temperature and the enamel thoroughly baked on.

It is cylindrical in form, and has no nasty corners to dig out—can wash it out perfectly in a minute.

Has revolving shelves, (no reaching over a pitcher of milk or jabbing a sleeve into a dish of butter); just turn the shelf and bring everything to you. These shelves are adjustable, can be raised or lowered instantly; are made of wire and beautifully tinned. They are light, strong with no surface to catch the drippings from a dish that might be accidentally overturned, therefore they are always clean, and they are likewise removable, quickly taken out and replaced.

The principle of refrigeration in the **"White Frost"** is simply perfect, maintaining a cool, dry atmosphere all the time. Guaranteed to keep as low a temperature and as dry an atmosphere in the provision chamber as any refrigerator made. The **"White Frost,"** is the people's Refrigerator, sells at sight, and every one sold brings another buyer.

Write us to-day for terms and descriptive literature.

If you would have the Refrigerator trade of your town you must sell the **"White Frost Refrigerator."** Every woman wants it as soon as she sees it, because it is handsome as well as good.

"Dear Bob, I want you to buy mea White Frost Refrigerator."

THE KEMP MANUFACTURING & METAL CO., LIMITED — McDermot Ave. E., WINNIPEG

THE KEMP MANUFACTURING CO., OF MONTREAL, LIMITED. — 39 St. Antoine St., MONTREAL

"Pandora" Range Scored a Triumph From The Word "Go" Because—

OVEN.—Is ventilated, large, fitted with thermometer lined with sheet steel, and a uniform baker.

FLUES—Special construction of the flues forces the heat around the oven twice and directly under every pothole—makes the "Pandora" range a perfect baker and a perfect cooker at the same time.

FIRE BOX.—Is fitted with triple, triangular grates, sectional cast-iron linings, is scientifically proportioned to the size of the oven, a great heat producer and consumes very little fuel.

RESERVOIR.—Is stamped from one piece of sheet steel and given three heavy coats of the best enamel. Finished in pure white, and has a smooth, hard surface, which is easily cleansed and perfectly free from taint—no other range is fitted with enamelled reservoir.

THERMOMETER.—The most successful thermometer yet invented is used in the "Pandora" range. It registers the exact heat of the oven, and can be thoroughly relied upon.

COAL GRATES.—Are made of three bars with short teeth which chop off clinkers easily. Three bars make the grate stronger, and wear longer than a two-bar grate.

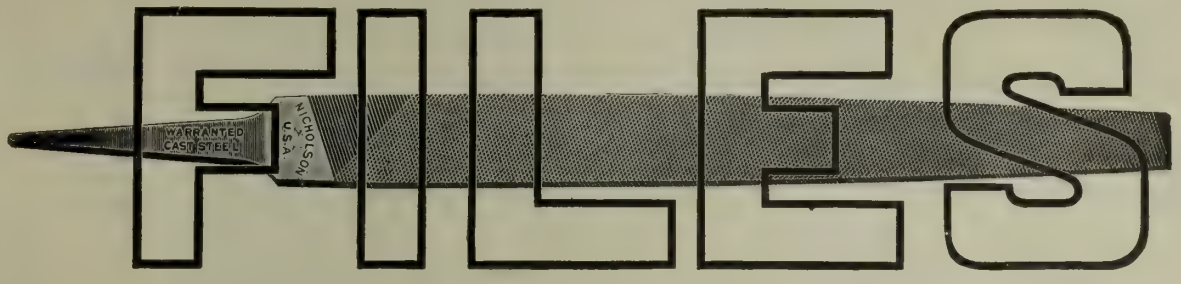
WOOD GRATE—Is so constructed that it will fit when the coal grate is in place. Is built exactly the same as the wood grates used in our "Famous" wood burning cook stoves, which have been a success for years.

McCLARY'S

Head Office and Factories

London, - Canada

Distributing Branch Warehouses at



TORONTO, MONTREAL, WINNIPEG, VANCOUVER, ST. JOHN, N.B., HAMILTON, CALGARY.

APPEARANCE.—Has heavy leg base and body, bold, strong carving, rich nickel dress, and is in every way a handsome range.

FIRE BOX LININGS.—Are composed of five heavy pieces of cast-iron. Any section can be replaced without disturbing the others.

BROILER DOOR.—Large enough to admit the largest broiler or toaster.

EMERY ROD.—Handy for sharpening knives or drying cloths.

The Galt Art Metal Co., Limited

GALT, - ONTARIO

Manufacturers of High Grade Sheet Metal Building Materials.

The House which always has and always will protect its Dealers and Agents. The House which enters into a binding agreement to do so—no empty assertions or promises.

This is The House, Mr. Dealer, for you to connect yourself with, if you wish to secure a large and profitable share of the roofing trade of this prosperous land.

Galvanized Steel is fast becoming and must eventually entirely be the roofing material of this, The Greatest Country of the 20th Century. Wood Shingles are a "back number," and Composition Roofings are at best only an experiment. This valuable roofing trade rightly belongs to the Hardware Man and the Sheet Metal Worker. Are you going to look after it, Mr. Dealer, or are you going to force it into other and eager hands? It's up to you.

This is the house where all receive the same Cheerful, Prompt, Accurate and Intelligent Attention, both to orders and correspondence. We are also noted for our Quick Shipments. These are very important points and play no small part in the matter of our great success.

You—Mr. Dealer—will receive the benefit of our large and effective advertising campaign, which is being carried on in all the leading Farm and Home Papers, as well as all Trade and Manufacturing Journals.

We want to have a close understanding with you so that we may refer to you the numerous enquiries which pour in every mail.

Write us for our Proposition and our Representative will see you immediately. Lose no time—your competitor may "pick this plum."

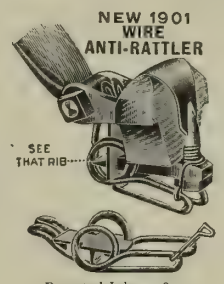
BURTON ANTI-RATTLERS

PAT. NOV. 15, 1887.
Trade Mark "Burton" Registered
Oct. 5, 1897.



We are sole manufacturers of the Genuine Burton Anti-Rattlers or "shaft-springs." These are made in four useful sizes, of best oil-tempered steel and are thoroughly tested. They may be easily inserted or taken out with a hammer without removing bolt and will not lose out.

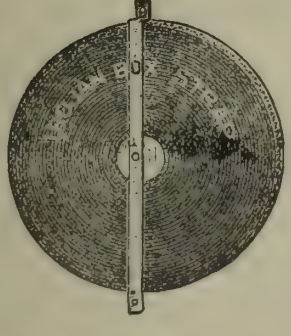
FERNALD QUICK-SHIFT

For simplicity and ease of operation the Fernald Quick-Shift is unequalled. Attaches to ordinary shaft-eye of any carriage, old or new, and by its use vehicle can be changed from pole to shafts or shafts to pole in an instant without tools of any kind. No rubber, leather or wear- plate. Made with best oil-tempered steel spring.

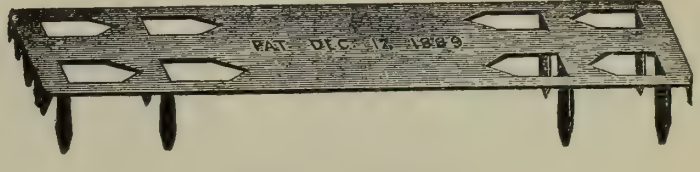
1901 WIRE ANTI-RATTLER

Patented July 1, 1890,
March 25, 1902.
Patented, Canada, Oct. 1, 1901.

For those desiring a wire anti-rattler our 1901 possesses superior merit. Improved in shape and guaranteed to fit any shackle. The shape of the plate draws the coil to the inside when attached. The improved rib-plate overcomes any squeaking or wear.



Carried generally by leading jobbers throughout the provinces.



Jobbers supplied by the manufacturers.

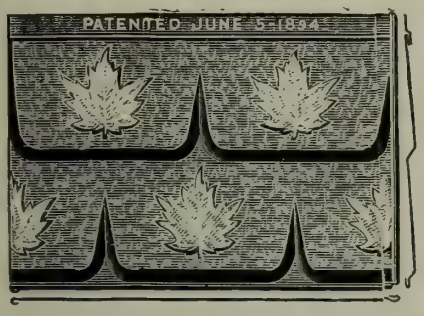
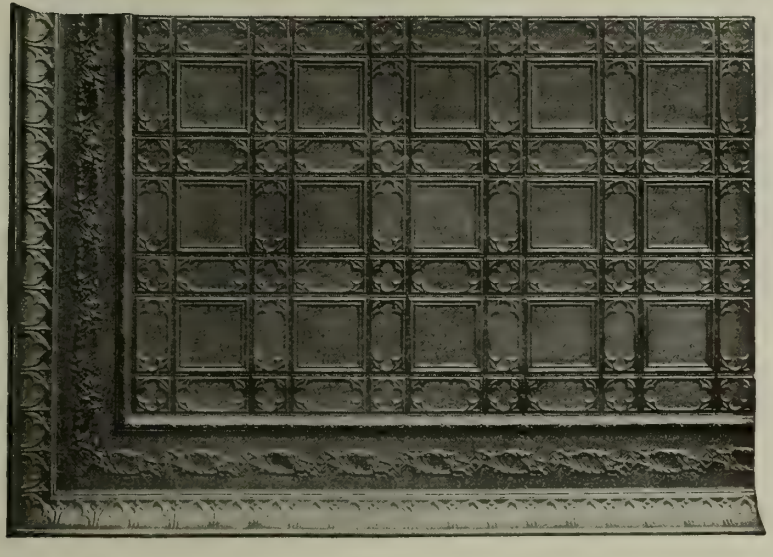
HAMILTON, - ONTARIO



THE TORONTO ENGRAVING CO., Limited

"WE WORK WITH THE TRADE"



Our sheet metal building specialties are the kind that make money for the dealer, because we have a peculiar way of helping him to sell. The hardwareman or tinsmith, who handles our line, has the bulge on all his competitors. Our policy of co-operation with the trade is a business-bringer, and if you are not benefitting by it, you ought to be. Send us a post card immediately and get our proposition by return mail.

"Safe Lock" Steel Shingles

I have had little trouble in selling "Safe Lock" Shingles—says one of our agents in a recent letter. **That's** the kind of metal shingle for **you** to handle. It's the only metal shingle in the world that locks **satisfactorily** on all four sides. When properly laid (which is an easy matter) "Safe Lock" Shingles are positively impenetrable to rain, snow or wind. Talk it up, among your customers, and **see** if it isn't "Easy to Sell."

Classified Steel Ceilings

are the choice of the most exacting people. Edges are trimmed true after being stamped. They are the easiest on the market to erect, yet the dealer gets as much for his work as he does on the inferior old-fashioned designs. We carry a large stock of ceiling goods, and **can ship immediately.** Send us your orders.

"Acorn Quality" Corrugated Galvanized Sheets

are the most popular barn roofing material on the market. You can make big money on this line. Our extensive advertising has created a demand for the "Acorn Quality" brand, and our travellers are at your service to assist in closing business. This is something worth thinking about. Are there any farmers building barns in your locality? Let us help you to sell them "Acorn Quality" Corrugated Galvanized sheets—the roofing that lasts.

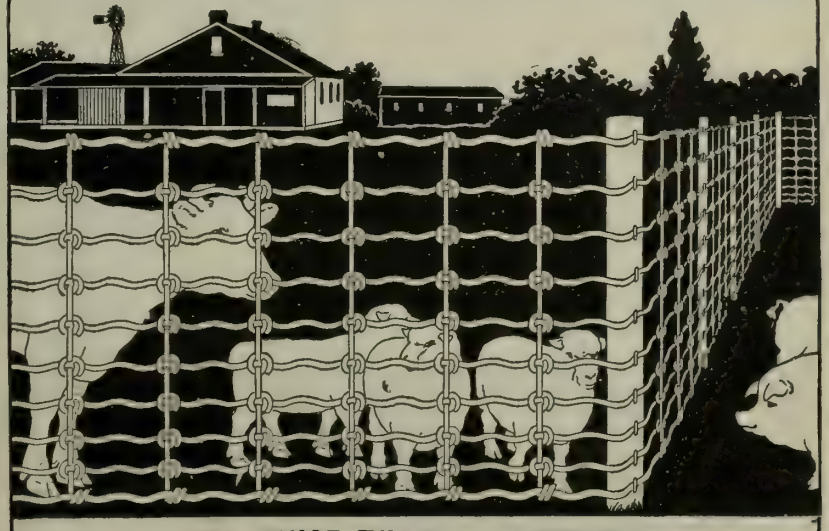
Dennis Wire and Iron Works Co. Limited

London Canada



Why not sell a fence that will advertise your business? Ideal Fence makes people stop and take notice, and it stands inspection.

Ideal is the standard Farm and Railroad Fence of Canada. Big, strong wires—all No. 9,—heavily galvanized and firmly locked. See how the patent lock grips uprights and horizontals together at every crossing. No chance for slips. Wires are gripped on five bearing points.

Good margin in Ideal. We want one live man in every locality. Write for catalog and Dealer's Terms.

The McGregor Banwell Fence Co., Ltd., Dept. O, Walkerville, Ont.
The Ideal Fence Co., Ltd., Dept. O, Winnipeg, Man.

THE FENCE THAT'S A FAVORITE

The fence that farmers buy is the fence that it pays dealers to handle. They soon find out the dealers who carry the kind of fencing that best suits their needs. That's why

Peerless Woven Wire Fence

should be carried in stock by all enterprising dealers. It has elastic and resistive qualities peculiar to itself which make it A 1 fence material and a money maker for dealers. Write and ask us and we will tell you why. Terms and prices on application.

London Fence

STRETCHES UP EASIEST, NEATEST, BEST

A wonderful improvement in woven fencing—that's the verdict of all who have examined the new London Woven Fence. With our improved Factory Looms we produce all even length strands—which means a far neater fence—one more easily erected—with a total strength unequalled by any other fence.

When up, the London Woven Fence presents an appearance that for neatness and symmetry is not approached by any fence in your neighborhood. Every lateral, stay and lock of heavily galvanized No. 9 steel wire, of the same temper, elasticity and strength that have earned for London Fence such a high reputation. Stays are remarkably stiff and straight—will not warp or curl. The lock is beautifully simple. Requires no weakening of wires by indenting or bruising. And you never saw a lock with a grip so marvelously tight. By long odds the biggest fence value on the market.

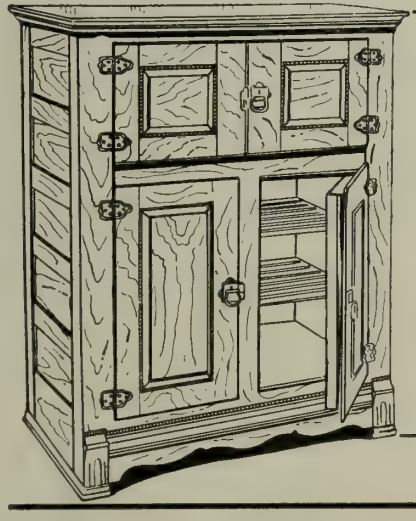
CONGO

NEVER-LEAK ROOFING

When you put on a roofing it is because you want to **protect** as well as cover your building and its contents. Many roofings merely cover. Congo **covers** and **protects.**

Some roofings are merely paper "treated" in some manner and shortly after being laid they go to pieces or dissolve in the first hard rain.



Congo is different. There isn't a particle in its composition that can be affected by water, heat or cold. It will not dry up, rot or rust.

A Congo roof never leaks, and for durability it is not equalled by any other.

Write for Free Sample and prove for yourself its superiority.

The Oakville Basket Co., - Oakville, Ont.

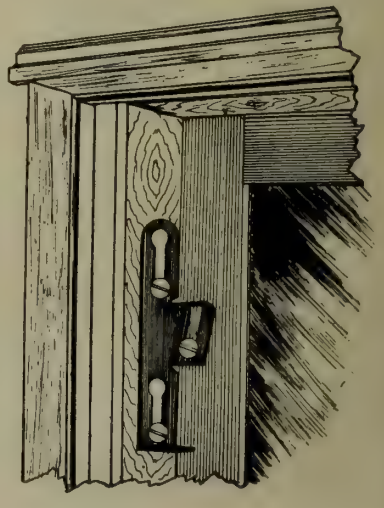
BOURQUE'S Storm Window Fastener

is the Best utility and economical Fastener yet invented.

Be the first to introduce it into your town.

UTILITY. It can be used as inside or outside fastener. It can be used as a storm window fastener in winter or as a screen window fastener in summer, or for venetian blind frames. Being fastened to the house window frame, the same fastener does for all the purposes set forth. It can also be used to lock the sash for parties closing their house in the summer. Same is done without taking out any screws, because the holes at the ends of the slots allow the screw head to pass if desired to relieve the fastener. No ladder to climb with a heavy window, all the work is done inside of the house.

ECONOMY. Once in place it is there to stay; no screws to take out every fall and spring. therefore no screws to lose every summer and buy every fall.



OPERATION. Once put on, the only tool required is a hammer, and a few taps on the top projection draw your window as tight as required.

UNBREAKABLE, Being made of the best steel it is indestructable and will last a lifetime.

Packed in 1 doz. set boxes (4 to a set) in a neat cardboard box, complete with screws and directions for putting on. They can be retailed for 20 cents at a good profit.

For sale by all first class wholesale hardware houses.

Patented in Canada, May 28th, 1907.

Write direct for particulars, sending the name of your jobber.

W. BOURQUE, - EAST SHERBROOKE, QUE.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines These enquiries come from Wholesalers, Manufacturers and Retail Dealers, who usually intimate they have looked through Hardware and Metal, but cannot find any firm advertising the line in question. In the majority of cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay them to advertise in larger space.

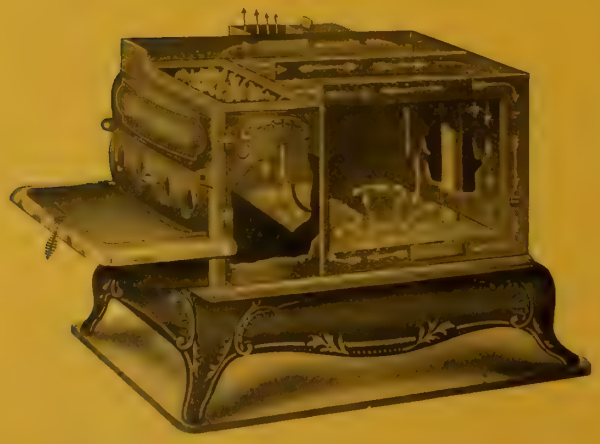
JOHN FORMAN, 644 Craig Street MONTREAL.

CAPEWELL
HORSE NAILS

The best made anywhere, and the fastest and most satisfactory blacksmiths' selling line of any on the market.

All **"CAPEWELL"** Horse Nails are made from selected Swedish rods, manufactured specially for us and according to our own specification. They are made by the perfected **"CAPEWELL"** process, controlled and used exclusively by this Company. This process insures a uniformity of temper and shape, as well as an elasticity and toughness which is not attainable by any other method.

Now is an opportune time to remind hardware dealers of another uniformity peculiar to **"CAPEWELL"** Nails. We refer to **UNIFORMITY OF PRICE.** Other makers of horse nails have found it necessary to frequently change their prices, leaving the dealer in a state of uncertainty as to "where he is at," or where he is likely to be. The price of **"CAPEWELL"** Nails which has not been changed from its inception, was arrived at with the object of furnishing the maximum of satisfaction with the minimum of cost. Our aim is to give honest value in every pound, and that we have succeeded in doing this is evidenced by the enormous and ever-increasing demand for **"CAPEWELL"** Horse Nails throughout the territory we cover. We propose to keep this demand on the up grade by the uniform excellence of **"CAPEWELL"** Nails and by the perfection of service we are in a position to render our customers.



THE CAPEWELL HORSE NAIL CO.,

A New Line Worth Money to You!

YOU are interested in a carpet sweeper improvement which means more profit in your pocket? Then you are interested in *the only carpet sweeper which has trays opening towards the centre, allowing the contents to be emptied into a small vessel—ordinary pail or dust pan.* That is the

SHIRREFF Carpet Sweeper

Every other carpet sweeper has to be emptied into a large sheet of paper, as the trays discharge the contents from both sides. *The central discharge is exclusively a feature of the Shirreff.*

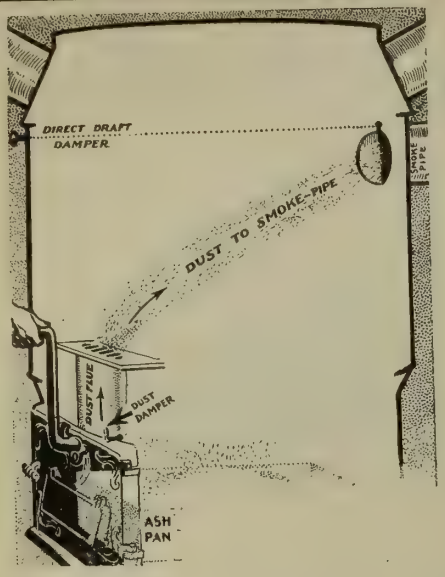
Every Shirreff Carpet Sweeper has frictionless metal bearings, and each axle is enclosed in a tube to protect it from dirt.

The handle of the Shirreff is screwed into the socket. The handle, socket, bail and all metal parts are made of steel, either nickel plated or enamelled, making the Shirreff much lighter than sweepers which have cast iron parts. Every Shirreff Carpet Sweeper is guaranteed.

Made in three grades at appropriate prices, leaving you a good profit.

Shirreff Food Choppers

are the leaders.



Made in four sizes, equipped with self-sharpening non-rustable *steel knives.*

They are great sellers.

PREMIER RANGES

TO THE STOVE MAN:

This handsome six-hole range, with 20-in. steel oven, fitted with reservoir and high shelf, will sell anywhere for

$45.00

At this price you can make a larger profit than on any other range on the market.

We want you to see our stove catalogue and prices. Write for a copy.

TO THE FURNACE MAN:

The increase of profit, can only be had by selling a furnace that has no competition. The Down Draft Furnace stands in a class of its own. The results and benefits derived from the principles of this heating prove highly satisfactory where others fail, because it will burn hard coal, soft coal, wood, coke, etc., with equal results. It is exceptionally suitable to burn the softer grades of coal of Manitoba, Saskatchewan, Alberta, Nova Scotia and New Brunswick.

Write to-day and secure the Agency of the furnace which will satisfy your customers

Gillette Safety Razors

Steady Sellers

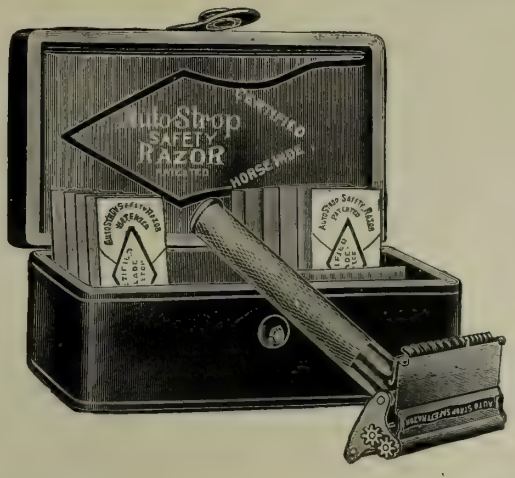
No Price Cutting

Do you realize how much more money for YOU there is in GILLETTE SAFETY RAZORS than in the old fashioned stropping razors ?

When a man buys an ordinary razor, that's the end of the sale—unless the razor doesn't give satisfaction, and then you have made a business enemy for life. But when a man buys a "GILLETTE" it means a regular customer. Of course, the GILLETTE holder lasts a lifetime. But—there are the BLADES.

When the first ten are used, the customer is going to buy new ones where he purchased the "GILLETTE" set. He will get in the habit of coming to you for blades, and you make your profit on every ten that he buys.

Being so well satisfied with his GILLETTE razor, he will naturally come to your store for everything else in your line that he needs.



So the GILLETTE really makes permanent customers for you. Then, too, there's no "price cutting" with the "GILLETTE." The retail price for triple-plated holder and 12 blades in leather case, is $5 everywhere. And every dealer must sell this set for $5.

The wholesaler who supplies you with Hardware and Cutlery or Druggists' sundries, can probably fill your orders for Gillette Safety Razors. If not, write us and we will send you the name of one who can.

Gillette Safety Razor Co.

CANADIAN OFFICE AND FACTORY :

63 St. Alexander Street, Montreal

A Satisfied Customer—Your Strongest Asset

Do you believe that a customer who is compelled to come to your store at regular intervals to replenish the blades of his safety razor—not one of which has given him a perfect shave—will feel well inclined towards you who originally sold him that instrument?

How do you think that he will regard you when he finds that your competitor has a Safety Razor whose blades can be kept constantly sharp, by a simple stropping method, and you sold him one of the old fashioned kind?

To tell him that the one he bought is well known and largely advertised, will not appease his wrath. He expects you to offer him the latest, and the best of anything he may want, and not to pawn-off old fashioned goods on him.

These are intensely practical days, and rich or poor our men hate to be "buncoed." They want a square deal every time.

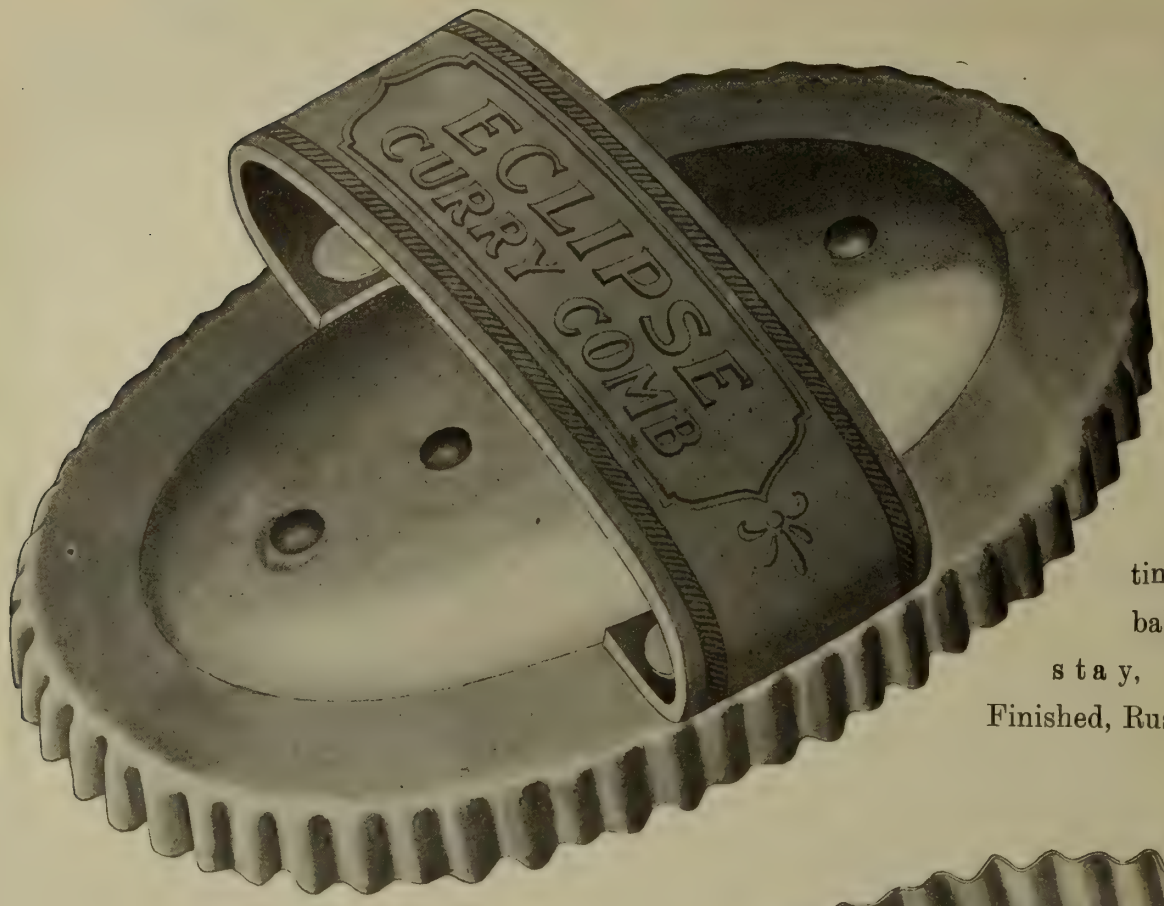
The Square Deal in Safety Razors is the Auto-Strop

Twelve **Auto-Strop** blades should, with care, last a lifetime.

The self-stropping device is so scientific that you can't spoil the blade if you try.

The hundredth shave is just as good as the first.

There is no taking apart to clean or strop.



What more can you want?

Buy one **Auto-Strop.** Try it on your own precious cheek. If, after that, you can recommend any other razor, it will only be because you have too many of the "No-stropping" kind on your shelves. Get rid of them and buy the **Auto-Strop.**

"WANT" ADS.

AGENCY WANTED.

AN old established British firm of glue manufacturers are desirous of arranging for representation in various parts of Canada. Correspondence to "Glue," care of HARDWARE AND METAL, 88 Fleet Street, London, E.C., England. (17f)

BUSINESSES FOR SALE.

Somewhere in Canada is a man who is looking for just such a proposition as you have to offer. Our "For Sale" department brings together buyer and seller, and enables them to do business although they may be thousands of miles apart.

SHEET metal workers, now is the time to learn pattern drawing, later on you will be too busy. Let us send you and your friends full particulars and sample drawing and instructions. Address The Sheet Metal School, Galt, Ont. (14)

A growing established business in stoves, furnaces, kitchen utensils, cutlery, gas goods, tinsmithing, etc. Turnover $20,000 last year. Room for big growth as population is well over 16,000, good stand and long lease, first class stock and tools, about $6,000. Proprietor must sell as other interests are compelling. A bargain for a quick sale. Box 702, HARDWARE AND METAL, Toronto. (12)

HARDWARE AND HARNESS — Manitoba — Stock about $2,000; good going business; excellent opportunity for tinsmith with small capital. Store building for sale; principals only. Box 14, HARDWARE AND METAL, Winnipeg. [14]

HARDWARE, stove and furnace business for sale—Established 40 years; best in this section. For particulars apply to estate of A. Thompson, Bradford. (12)

ARTICLES FOR SALE.

Don't keep any fixtures or tools around your store for which you have no further use. They are worth more to-day than they will a year hence. Don't keep money tied up which you could use to secure discounts from your wholesaler.

FOR SALE—One No. 92 National Cash Register, cost $400.00; nearly new, will sell at bargain. Box 708, HARDWARE AND METAL, Toronto. (12)

SITUATIONS WANTED.

Travellers, clerks, or tinsmiths, wishing to secure new positions, can engage the attention of the largest number of employers in their respective lines, by giving full particulars as to qualifications, etc., under "Situations Vacant."

POSITION by hardwareman—Good general experience; best references. Box 703, HARDWARE AND METAL, Toronto. [12]

SCOTCHMAN, open for engagement shortly, most extensive experience open fire grates and fireplaces, every type on British market. Also stoves and mantel-pieces. Accustomed to best class trade and architects' work. Accustomed also estimating and handling workmen; has knowledge also of cutlery and general hardware. Thoroughly practical and capable salesman, competent to take any responsibility; character exemplary. Box 49, HARDWARE AND METAL, 88 Fleet Street, London, Eng. (12)

TRAVELER of large experience in Ontario, desires a responsible position; to represent a first-class iron foundry, manufacturing stoves, furnaces, steam and hot water heating apparatus; highest references. Box 709, HARDWARE AND METAL. [12]

SITUATIONS VACANT.

You can secure a "five-thousand-a-year" manager, or a "five-hundred-a-year" clerk, by stating your wants under "Situations Vacant."

WANTED AT ONCE—An experienced hardware traveler for Western Ontario. Apply giving experience and reference to Box 710, HARDWARE AND METAL, Toronto. [14]

SALESMAN wanted for hardware trade to carry good selling side-line on commission; give references Box 906, Galt, Ont. [14]

BUSINESS CHANCES

A YOUNG lady bookkeeper with four years' experience in retail hardware office, open for engagement April 1st. Highest testimonials. Apply Box 705, HARDWARE AND METAL, Toronto. (13)

HARDWARE stock $8,000; annual business $25,000; price, 100 cents; good town; terms, $5,000 down. Address Box 707, HARDWARE AND METAL, Toronto. [13]

MANUFACTURERS of standard reputation in hardware and metal branches, who desire to be represented by New York agent, will address "Domestic and Foreign," care of HARDWARE AND METAL, Toronto. (12)

A WHOLESALE established stove business; patent heating stoves five years on market and successful workers. Would go well with other lines. Proprietor lacks capital to push business. Patterns, stoves and material about $7,000. Would take half cash balance stock in reliable company or 75 cents on the dollar for cash sale. Full investigation solicited. Box 701, HARDWARE AND METAL, Toronto. (12)

Business for Sale

AS we intend to confine ourselves to the Wholesale Hardware business in future, we have for sale our retail general hardware business. This business has been established for over twenty years and always has been and is now a profitable one. Correspondence solicited, but as it will require $10,000 cash at least to swing the transfer, we expect evidence of your good faith when you write.

Matters of Mutual Interest

A Page of Gossip Between the Publishers and Readers of Hardware and Metal.

In a recent chat with the Winnipeg manager of Hardware and Metal, Mr. J. C. Perkins, manager of the export service bureau of Butler Bros., the Chicago wholesale mail order merchants, said:

> "I like to size up a trade journal for a while and see it in its Sunday clothes and in its every day clothes, particularly the latter. I don't think there is any use at all in advertising in a trade paper that doesn't get close to its readers, and I think I can pretty well size up the influence of a trade paper with its readers after I have seen its regular every day numbers for a few weeks or months."

Hardware and Metal can be judged by readers and advertisers when in either its Sunday or every-week clothes. The large staff of editors and correspondents in nearly every city and town in Canada, together with its large traveling staff of advertising and subscription representatives, places the publishers in personal touch with every reader. The close connection of the paper to the Retail Hardware Associations, its editors taking an active part in founding these organizations, adds another link to the chain, and it is safe to say that the retail hardwaremen of Canada almost unanimously consider the paper as their own and endorse fully the sentiment expressed in the following paragraph taken from a letter written last week by W. H. Richardson, Essex, Ont., a member of the Executive Committee of the Ontario Retail Hardware Association.

> "The successful efforts you have made in bringing the Retail Hardware Association up to its present standing and the benefits that every hardwareman has derived through the columns of your paper from time to time, cannot be expressed in words."

Any work members of Hardware and Metal's staff have undertaken to organize the retail trade has been done with the broadminded aim of benefiting the trade as a whole. If organization is profitable for manufacturers and jobbers why should not the retailers participate in the benefits? Clashes may occur at times, it is true, but handled from a broadminded standpoint by intelligent men, there is no question that cannot be settled with justice to all and to the ultimate benefit of every branch of the trade as anything which injuriously affects the retailers reacts upon the jobbers and manufacturers. Hardware and Metal and its staff, therefore, will continue to be at the service of the trade, and the retailers particularly, in any movement tending to make the hardware business more profitable for those engaged in it.

A trade newspaper that has the confidence of its readers cannot help but be an admirable advertising medium for jobbers and manufacturers, and the unanimity with which Hardware and Metal's oldest advertisers continue year after year to talk to their customers through these pages, together with the large number of new advertisers who yearly take advantage of the opportunity for publicity the paper offers, speaks eloquently of the paper's worth from an advertising standpoint.

From inquiry recently made of the subscribers to a well-known trade journal as to which general department of the paper was of the greatest interest to them, seventy per cent. of the answers received stated that they looked over the advertisements first. This is the difference between general newspaper advertising and advertising in a live and reliable trade paper. Advertisements in the general newspaper can be said to be only incidental to the publication, while in the trade magazine the advertisements are an integral part thereof. The trade paper is designed to help its subscribers in their business, and where the general newspaper ad. attracts a reply here and there, the trade magazine advertising is scanned by men who are actual buyers of the goods, in large quantities. From the standpoint of the advertiser, every hundred circulation of the trade newspaper is worth from one to five thousand of the general newspaper circulation. Even though a firm spends millions in creating a demand for its goods direct from the consumer, the dealer should not be overlooked. The largest advertisers are realizing this more and more.

The small advertisers, too, who want a clerk, a tinsmith, a set of tinsmith's tools, or want to sell their store, some of the store fixtures, or exchange one class of goods with another, are recognizing the trade newspaper's value more and more in comparison with the overcrowded "want" columns in the daily newspaper with circulations covering tens of thousands not interested in the hardware trade. That Hardware and Metal want ads. bring results is shown by the number of firms who constantly use the department. Iveson L. Cooke, Fenelon Falls, for example, is one of a number of hardwaremen who has used Hardware and Metal's "want" columns repeatedly, and the following, written on Jan. 27, indicates his satisfaction:

> "Once again your paper has been of service to me. Two weeks ago I put an ad. in the "Goods for Sale" column and I have realized the best results obtainable."

Have you ever stopped to think that the editor cannot do it all without your co-operation? That trade paper is best and most helpful that contains the greatest amount of information written by the men in the trade who are up against hard problems they want solved, or who take the time and trouble to tell the editor some of the interesting things that are happening. The editor will welcome letters, suggestions of how to make the paper more helpful or criticisms of any articles published, whether they be from the largest jobber or manufacturer or the humblest clerk in a retail store. Naturally, too, a word of encouragement such as the following from the W. W. Chown Co., Limited, Belleville, is also appreciated:

> "We did not get Hardware and Metal last week, and as we feel we cannot do without it, would ask you to forward another copy."

In line with the established policy of Hardware and Metal to be as helpful as possible to every branch of the hardware trade, the Canadian publication rights have been secured for "Men Who Sell Things," an exceedingly practical work, written to help travelers develop their salesmanship powers. Much of a theoretical nature has been written on this subject, but this book is out of the ordinary—it is practical. Some salesmen will, of course, disagree with some of the author's contentions, but in disagreeing they will be helped and enlightened. The work will be reproduced serially in Hardware and Metal during the balance of 1908, and travelers not now receiving the paper regularly, or firms not already supplying their salesmen with the paper, can, with advantage to themselves, arrange to secure Hardware and Metal for the next six months at least.

We've had a chat of mutual interest, haven't we? But it has been a little one-sided—we've done most of the talking. Let the editor have a letter from you expressing your views, favorable or otherwise, regarding this Special Number or the regular issues. Help the Editor to help you. THE EDITOR.

ASSOCIATED EFFORT PAYS.

So strong and so many are the arguments in favor of business men working together for their mutual advantage, rather than singly and at cross purposes, that it would seem a waste of time and effort to point out the value of associated effort. But many otherwise intelligent men still "hoe their own row," and hold aloof from organizations which can be made of financial and social profit to them. Consequently, some brief comments seem in order.

Starting in the store itself there is need for organization. If the merchant takes his employes into his confidence and seeks their advice and co-operation in developing plans to extend the business, both he and they will profit. Call the staff together once a week, if possible, or, at least, once a month, and talk over the best methods of pushing the lines in season; decide on the window displays to be made and who is to do the trimming; discuss the store advertising and figure out if it won't pay to have one of the staff call on probable customers in town or on nearby farms to push certain lines. Don't let the conferences drag, don't let the staff feel that it is a waste of time to attend them, but go prepared to direct the discussion while giving every opportunity to let each one from the delivery boy up have a chance to suggest ideas. Take your trade paper along and discuss some of the articles on salesmanship, window dressing, advertising, trade organization, market conditions, etc., and you will soon develop a store staff capable of doubling the size of the business. An annual dinner to the staff or a bonus to the most successful workers will also help to inspire the staff with a personal interest in the business.

Another field for effort which should not be neglected is the local organization of merchants. If there is a Board of Trade or a Merchants' Association in existence, be an active member and help every move to encourage outsiders to come to town. Build up a home spirit to support local industries and keep the money circulating at home and have the local editors constantly point out that every dollar sent to a mail order house is a brick taken out of the home structure, weakening every local institution, schools, churches, entertainments, stores, newspapers, etc. And don't fail to co-operate with your own competitors. There's more money and a better peace of mind in being friends than in being enemies. In Barrie, Ont., where the hardwaremen get along like sensible business men, nails and other goods are sold at a profit, while in other towns not far away where hardwaremen don't speak as they pass by, nails were sold far below the market price all last season. Get together in a local association of hardwaremen, decide to close the stores early and come to a common understanding on the various evils confronting the trade from a local standpoint.

But the field is not yet covered. Every merchant is subject to provincial and national legislation. Unorganized this legislation cannot be as favorable as if organized action is taken. The parcels post c.o.d. regulations proposed a year ago by the Postmaster-General are a good illustration. If it had not been for the prompt action of the Ontario Retail Hardware Association these regulations would have been adopted and every postmaster in Canada would have become a c.o.d. agent for the catalogue houses with the Government paying the salary, the smaller communities suffering and the mail order millionaires piling up more wealth. Numerous other matters to be dealt with by a provincial organization, such as the sale of goods to consumers by firms looking for the trade of retailers, could be enumerated, but there is no greater advantage to be gained from trade associations than the gathering together and exchange of ideas by men engaged in one line of business in different parts of the country. The success of Retail Hardware Associations in about 40 of the States to the South, as well as in Ontario, are ample proofs of the value and necessity of trade organization and merchants, instead of looking upon the payment of a membership fee as an expenditure should consider it as one of the most profitable investments they can make.

THE OUTLOOK FOR BUSINESS.

While 1908 is hardly expected to break any records so far as volume of trade is concerned, the outlook for the hardware trade is by no means dark. On the contrary, a large and satisfactory business should be done, conditions being favorable for an active building year, while light purchases of many lines last fall and winter will mean a heavier demand for these articles during 1908.

Prior to the financial flurry of last fall everything was at its highest price, not only materials, but labor. "Wages were at the highest point ever reached, and the amount of work done in a day was the lowest ever given," says a leading architect, who goes on to point out that the cost of building was from 20 to 60 per cent. more than a few years ago. This year manufacturers are anxious to sell and workmen exceedingly desirous of securing jobs, so while speculative building will be largely eliminated, innumerable men of average means, who have been deterred from building owing to the high costs, will now erect houses for themselves.

Much money which has been spent in speculation in mining stocks; land

booms, etc., will now be turned into legitimate building enterprises, an infinitely safer class of investment. The extent that stock gambling had spread amongst Eastern merchants and land speculation amongst Western clerks, etc., was so great that the coming of a period of "tight money" must be looked upon almost as a blessing. The merchants and clerks who lost money in Cobalt stocks or town lots miles from Western Canada cities, have, or ought to have, learned that it is the wisest policy to invest only in legitimate business enterprises.

The return of confidence in Canadian securities is another indication of continued prosperity in Canada. Railroads are spending millions on construction work. Canada's mineral, forest, fisheries and agricultural wealth will all be exploited to the full this year. Tens of thousands of immigrants will continue to pour into the country, and, if we mistake not, many manufacturers will find it necessary to enlarge their plants before 1908 closes, while the beginning of another year will find retailers totalling up 1908 business and finding it compare very favorably with that of 1906 and 1907.

We are in better trim for the storm which broke over us last fall. We have reefed our sails, are steering the business ship a little more into the wind, and are better business navigators than we were a year ago.

THE ADVANTAGES OF SYSTEM.

System is the sheet anchor of every business. Its importance is not regulated by the scope of operations. To the small merchant it is just as essential as to the large one, and yet how often does the former excuse his lack of system in organization on the grounds that his trade is not extensive enough to warrant exacting business methods. This brings to mind the old story of the merchant, who, although possessing two windows to his store neglected to use one as a means of display on the grounds that the extent of his trade did not demand it. Needless to say, his trade never did.

Carelessness is an insidious foe that is always threatening a business man It creeps into his books, into the disposal of his stock, into his salesmanship, into the very heart of his business, until one day he finds that the vitality of his enterprise has been sapped, his possibilities of growth ruined, and his very existence threatened.

System is the only means whereby this evil of carelessness can be combatted and killed. System in the stock, in the books, in the selling force of the store, in the receipt and delivery of goods, in fact, system everywhere and nothing but system, and then, and only then, is the business man safe.

It is naturally impossible for the merchant just starting in business, or for the man who has gradually drifted into slack methods of organization, to institute at once a system on the lines laid down by specialists. In the one case there is a lack of experience and probably of knowledge as to the best methods to be adopted, in the other confirmed habits of carelessness and a consequent reluctance to put the house in order, to be overcome. Besides system is not of to-day, or of to-morrow. It is a development of certain fundamental lines, which development can only be brought about by the careful investigation and the business acumen of each individual merchant. Experts can tell him of various plans that have been adopted and found successful and can give him for guidance primary rules that are the foundation of all systems. But it is for the merchant himself to evolve the particular lines upon which his system shall be built up, so that from it he can secure the best advantages.

The merchant just starting into business, the man who suddenly realizes that his business is going from him through want of method, need not, therefore, be appalled at the thought of instituting system. No extreme revolutionary process is necessary. The whole organization, or what passed for organization, of the store, need not be turned upside down in a desperate attempt to institute immediately another man's system—a system that was probably only perfected after many years' labor. The resultant confusion would tend to kill the strongest resolve made to induce improvement. The merchant should start at first in one department only, bring about his changes slowly, and watch carefully their results.

He can take, for instance, his delivery of goods. Here probably he has had no system of check at all. Let him try to evolve a record book that will enable him to keep track of all goods delivered, whether they were paid for in the store paid for on delivery, or credited. When the merchant is satisfied that he has brought about some system in this direction which will stand by itself, then he can tackle another branch of his concern.

In this gradual way the introduction of system as applied to the whole organization can be brought about with the least amount of trouble, while the process will not appear half so complicated an ordeal. Once some degree of order has been evolved out of chaos, the merchant will perceive the undisguised blessing of system, and will not rest content until he has established a complete method. The great thing is to make a start, and the rest is not only easy, but a pleasure. No merchant should be deterred by the apparent difficulties of introducing system. It is never too late, never too early, for a merchant to set his house in order, for he is face to face with the inevitable fact that a business nowadays to be successful, must be conducted with system.

HELP TO CREATE BUSINESS.

If for no other than selfish reasons hardware merchants should take an interest in the public affairs of their town, district and country. The man who is unselfish enough to devote a share of his time to filling municipal positions, or to representing his district in Legislature or Parliament, broadens his ideas and new opportunities for business constantly open before him. If there isn't a Board of Trade in your town organize one, and if you haven't paid any attention to public questions in the past do so in future.

How, for instance, are the roads in your district? Have you ever considered the profit there is for the merchant in good highways. Good roads are almost as essential as good clerks. The town that is surrounded by good roads becomes a trade centre just as the city that is a railroad centre becomes a wholesale and manufacturing headquarters. Get good roads, adopt plans to attract buyers to town and use printers' ink to let outsiders know your town is on the map. The local editor will help—especially if he is made to see profit in it for him as well as for you.

Then if your town hasn't a water or sewerage system agitate for them persistently. The health of the community demands the most modern public works. And the live hardwareman who knows a few things about water filtration, septic tanks, etc., is likely the one to land a good bunch of business once the water is turned on.

There are many ways to help create business, the essential thing being to take a live interest in the things going on in your community and be in the forefront in advocating anything tending towards development and progress.

Early in November a New England hardwareman made a hit with a window exhibit devoted to "Hen Coop Repairs," this inscription appearing on a large sign occupying a central position in the window. Other much smaller cards were used freely in connection with the articles shown. The window simply and inexpensively arranged proved a trade winner, its effect being such that the merchant will repeat the display with a little modification next year.

Americans Capturing Western Stove Trade

Canadian stove manufacturers are finding that the American stove invasion of western Canada is assuming alarming proportions and the situation demands their immediate and careful consideration. A well-informed stove man, who has been all through the western provinces during the last twelve months, stated recently to Hardware and Metal that at least 50 per cent. of the stove trade in western Canada is going to American manufacturers. In the city of Winnipeg at least 70 per cent. of the stoves sold in the retail stores are of American manufacture. Other well informed stove men state that the proportion of American stoves sold is even larger. Practically every western jobbing house is either pushing American stoves exclusively or giving them the preference, and this is being done in the face of a duty of 25 per cent. Clearly the situation demands the attention of the Canadian stove manufacturers.

What is the explanation? In part it is due to the big influx of American immigrants, who, naturally enough, are favorably disposed towards the lines of stoves to which they were accustomed when living in the United States. They buy the goods with which they are acquainted and it requires good salesmanship and persistent advertising to persuade them to test the merits of lines with which they are unfamiliar. This is one cause of the present popularity of American stoves in the west.

It is sometimes stated that the principal reason is that the American manufacturers turn out a more attractive and handsome line than do the Canadian. Perhaps this objection may have held a few years ago, but an impartial examination of the various lines on the market in western Canada will convince most people that there is very little in this objection. Canadian stoves compare very favorably in appearance and design with their American rivals.

The real explanation is that the American manufacturers are making a lighter stove than the Canadian, and as a consequence they are able to sell cheaper in spite of the handicap of a 25 per cent. duty and the disabilities of the dumping clause. There is no intention of disparaging American stoves, for they satisfy the demands of the trade, and the public and are capturing a big portion of the business in western Canada; but it is an undoubted fact that they are not so substantially built as the Canadian and for that reason they are sold cheaper.

On the floor of a western hardware store one will frequently see two stoves standing side by side. They are of practically the same dimensions and in appearance there is very little to choose between them. One is of Canadian manufacture and offered at a price of say $45; the other is an American stove selling at $35. It is true that the Canadian stove may be from 75 to 100 pounds heavier than its American rival, but the customer examining those stoves can see no particular difference to warrant the extra $10 in cost, and although the dealer may try hard to sell the higher priced stove he does not always succeed in doing so. The big increase from year to year in the sales of American stoves in the west is positive proof that the public are partial to the low-priced line.

What are the Canadian foundries going to do about it? They must do something and do it quickly or the situation will soon become much more serious. One Winnipeg jobbing house has already brought in some twenty cars of stoves for 1908 trade. The fact that these stoves are being brought in so early—several months before they are actually needed for delivery—indicates that there will be "something doing" in the stove business in the west before next autumn.

There are two courses open to the Canadian manufacturer. He can change his manufacturing policy and turn out for the growing western trade a line of stoves designed to compete with the light-weight American stoves in point of price. That is, he may manufacture a cheaper and less substantial line to meet a special kind of competition. On the other hand, he may continue his present manufacturing policy and redouble his efforts to convince the public of the wisdom of buying the more substantial and consequently higher priced lines and convince the trade that it is in their interest to push the sales of the Canadian makes. This necessarily means much larger advertising appropriations and more aggressive salesmanship.

One course or the other must be adopted very shortly if the proportion of Canadian sales is to be increased.

ADVERTISE AS YOU TALK.

Retail advertising that does not possess some of the chief qualities of a good salesman fails in its purpose. It should address the public in much the same tone as you adopt in talking to customers over your counter—a tone of reasonableness that is calculated to convince. Some merchants have utterly failed to grasp this point. They are the sensational advertisers who use up valuable space to exclaim that their entire stocks will be "sacrificed regardless of price"; that goods will be sold at "ridiculous" rates; that the "cutting and slashing" of prices at their stores is unprecedented in the history of merchandising; that they practically give away "dollar bills for fifty cents"; that theirs are the "greatest price-cutting sales on earth," etc. Imagine any one of these merchants making use of such terms while endeavoring to actually sell goods to a client! He wouldn't think of doing so. Then how in the name of reason can he justify their employment in his advertising?

SOME HARDSHIPS OF TRAVELING.

Sitting in an office or working behind the counter one is apt to picture the traveler's life as one overflowing with the good things of life. Eating at hotels, seeing the country and charging expenses up to the house, looks good to the fellow who has to stay in one spot on the map and eat at home always. But try the road for a while and the average man will long for the simple meals, the cosy bed and regular hours of the man who can walk or take a street car from his house to the store every day.

Hotels in Eastern Canada are none too sanitary and meals are not what they should be, but the average Eastern salesman has only from Monday morning till Friday night on the road, and he has a touch of home life at the week end. Not so with the Western travelers, however. His territory is large, the towns small, the hotel accommodation limited, the dangers of typhoid great, and the temptations to "go wrong" unlimited. Driving over the prairie in all kinds of weather, getting up to catch the 2 a.m. train, waiting at dreary depots hours for accommodation trains, finding all the good rooms gone and having to sit up all night or bunk with the bugs, drinking water loaded with typhoid germs or accepting the invitation of the good-hearted merchant to "have something," are all incidents in the life of the salesmen in the West, apart from the difficulties of transporting baggage, making sales and "making good" with the firm.

Only a few of the rough spots have been touched upon, but volumes of "experiences" could be written by every traveler who has been given a "territory" in a "new" country. Of course there are bright spots and a fraternity feeling amongst the "boys" helps to make life worth living. "Bill, take care of the fellow upstairs, I've got to leave town and he's got the symptoms. He's a new one or he'd have piked for headquarters a day or two ago," illustrates the fellow feeling existing amongst the men who do not know who typhoid's

next victim will be. And "I've had to pack several trunks and ship them to the house," the words of a prominent Western hardwareman, indicate that constant treating at the bar and fear of changes of drinking water, with other incidentals of Western traveling life, help many to go to the bad.

No, the life of the traveler isn't all peaches and cream. At best, it is a wearisome existence and the retailer who considers his own and his fellowman's interest will always have a pleasant word if he hasn't an order for the men who call on him loaded with order books and stocks of good ideas picked up by calling at other stores.

METALS DURING THE PAST YEAR.

The year 1907 opened with the Industrial Army of America on the "double quick," and closed with the greater part of the army marking time and some of the largest regiments disbanded. Economists, who are quoted as world-wide authorities , explained the disastrous ending as a result of a too rapid expansion of credit resources. The banks in Canada early in the year prepared to curtail their loans, and quite a number of new concerns, with more or less incapable management, failed, attempting to extenuate non-success by reason of the monetary stringency. The compelling optimism of the Canadian West overshadowed any idea of caution, and Eastern manufacturers and jobbers were easily led to extend credit without any very complete investigation. There is always a due date—settlement must be made some time—and the year 1908 is the period when adjustment of 1907 accounts will proceed and finish. Metals now occupy such a large place in the world's activities that changes in prices are eagerly noted even by those engaged in businesses not allied to the metal trade; advances being taken as foreshadowing commercial activity; declines on the other hand as indicating approaching dullness.

Copper to-day occupies the centre of the stage. The financial columns of the daily newspaper continually quote copper prices, the closing or opening of mines and other items pertaining to copper. The reason why copper is so much in the public eye is doubtless because some of the principal users of the metal were the first to feel the effects of the too rapid expansion of business and consequent tightness of money. The electrical development in America—now of enormous proportions and destined to be still greater—is one of the great factors in the copper situation. Mention must also be made of the frenzied writings of a certain New Englander, who created what might be called an outside academic interest in copper.

London prices are probably the best criterion of values. In January, 1907, the high point for standard copper was £108 10s. ($24.75), while in December, 1907, the low point was £57 5s. ($12.60). Since the turn of the year copper has recovered very slightly, the price for spot being at time of writing £58 12s. 6d. ($12.90). Standard copper is a purely speculative article. Best selected casting ingots command higher prices. At present figures, the uses of the metal should be multiplied, and it must be remembered that the production of copper is in strong hands. Considerable buying has taken place this month for delivery in April, May and June, and there is a strong feeling that prices will not recede very much more and that any change will be in the nature of an advance. European purchases of American copper have been of record proportions, and it is stated that the leading interest in the States has been unloading surpluses in Europe at considerably under American prices. The metal is not all going into consumption—a great part is being held for a rise.

Tin, the favorite child of the London Metal Exchange, has had the same vicissitudes in value as copper. The top price in January, 1907, was £192 15s.—the lowest price in December, 1907, was £115 10s—a drop of £77 5s., equivalent to about 17c. per pound. It has recovered some since the beginning of the year, the present spot price being £135 15s. American consumers have been going too bare of stocks lately with the result that during the last four weeks several squeezes have been engineered in New York, a premium of one cent per pound having been paid for spot tin, as against tin delivered ex vessel or dock. The future of tin is not clear. It is a metal indispensable, without any substitute, and must continue to be the plaything of the large operators. It would, of course, be absurd to say that the metal is entirely controlled by specultors, as the demand in the end must be the determining factor of value.

Lead, during 1907, in common with other metals, was selling at high prices. At the beginning of the year the London price for Spanish was equivalent to $4.40, at the close $2.85—quite a marked decline. The stocks of lead are not very large, and, as a result, the prices have been very irregular. The present London price for Spanish is about £13 13s. 9d. ($3). The world's production in 1907 amounted to about 1,000,000 tons of which one-third was produced in the United States.

Zinc was quoted in London at equivalent to $6.20 in January, 1907, and in December at $4.30—a decline of nearly two cents per pound. It will be seen, therefore, that zinc had a common fate with other metals. During the early part of 1908 the price started to advance, the present level being about $4.65. Zinc producers made preparations very early to curtail their output when bad times were sighted, the result being that the stocks are small and the market in a fair condition.

Antimony varied in price in 1907 from $26 in January to $9 in December, an astonishing drop of 17c. per lb., or a decline of 66 2-3 per cent. It is a metal very much in demand in war time, and the conflict in the East raised prices to extraordinary levels which were maintained for a considerable period. It is undoubtedly at bottom figures at present, and the slightest improvement in trade would start a strong upward movement.

Iron and steel were produced in record quantities in 1907. The production of pig iron amounted in round figures to 60,000,000 tons—a colossal output. The United States produced over 25 million tons; Germany, 12 million; Great Britain, 10 million. Canada ranked ninth among the world's producers, following Sweden and leading Spain. The output was about 600,000 tons, mostly made with foreign ores. The larger interests in Canada are unfortunately in a somewhat disorganized condition, and a real steady and profitable system of manufacture has not yet been attained. The great fault has been that the beginnings were not on a modest scale and the controlling interests were not ironmasters. Middlesboro pig iron was selling in January, 1907, at 60s. (equivalent to $15), and in December, 1907, at about 48s. The stocks in January, 1907, were 538,154 tons, and in December, 1907, about 89,000 tons, so that it will be seen that stocks are very low, a fact that will surely prevent any great recession in price. Strong evidence of the wealth of Great Britain is given by the fact that it is the only country in the world, financially able to carry a stock of pig iron.

Finished iron and steel such as structural material plates, sheets, tinplates, etc., were turned out in record quantities in 1907, but the last three months of the year found the mills working on old contracts with little new business in sight. It will be gleaned from the foregoing that this condition existed in all lines of the metal business. The outlook for 1908 is one of diminished production in the first half of the year, but in the last half a reaction will set in. The very momentum acquired in organized trade will be sufficiently strong to prevent stagnation.

Manufacturers of certain lines of machinery report that Russia is buying in large quantities, and as the activity spreads the wheels of commerce will turn more rapidly in all countries. Again records in production will be broken, prices soar, and history repeat itself.

Evolution Towards Cash System

Reasons Why Cash is Superseding Credit—Experiences of Many Merchants in Western Canada—Two Years' Successful Operation at Regina—Results of a Trial of the Cash System at Goderich.

Cash System Superceding Credit

Weston Wrigley Outlines How the Movement Has Developed in Canada—Experiences of Ontario Hardwaremen.

It would be hard to find a hardware merchant who would not prefer to conduct his business on strictly cash principles, but the fact is that few have been able to do so in the past. Certain forces are at work in society, however, which tend to place mercantile business in a position where credit sales can be greatly decreased, if not abolished altogether, and the wise merchant is he who recognizes this tendency and trims his sails in the direction the wind is blowing.

The mail order houses have been responsible for much of the educational work in favor of the cash system. They have taught the farmers to buy for cash, and have forced many merchants to modernize their business methods in order to prevent their business from slipping away to the catalogue houses. They have, in addition, helped to make possible the many large and successful retail hardware associations, which are helping to revolutionize the thought and business methods of the retail trade, and, incidentally, the catalogue houses have also encouraged the dealers in some districts to centralize their business under one roof in order to successfully compete with the large city enterprises.

Bankers Encourage Savings Habit.

Another force which has aided the cash movement in Canada has been the development of the savings bank system in that country. A few years ago a bright bank manager hit upon the idea of telling the merchants who did business with his bank it would be more businesslike to pay cheques instead of cash to farmers from whom they purchased butter, eggs and other produce. The merchants did so, and when the farmer went to the bank to cash the cheque he was urged to leave all or part of the money on deposit.

The banker generally succeeded in this and thus the 'savings'' germ was implanted into the farmer's brain, and he soon learned to ''stand off'' the merchant from whom he bought his hardware and other goods. The merchant was told to wait until some pigs were sold or some wheat marketed, the farmer all the while leaving his money in the savings bank and running his farm on the merchant's credit. There was, of course, a limit to this, and when the merchant saw the point, or when the banker or wholesaler shortened the terms of credit on the retailer, it soon became evident that it must either be the cash system or bankruptcy.

Whatever the reasons encouraging retail merchants to adopt the cash system, the results are satisfactory, the granting of credit to customers having a demoralizing effect upon both merchant and customer. The hardwareman who does business on the credit principle loans out his money (in the form of goods) without interest, and, as a rule, gets little thanks for his ''philanthropy.'' His giving of credit will soon tie up his surplus capital and he will be forced to buy from one jobber on long terms of credit, losing discounts on short term purchases, and being unable to take advantage of bargains available from other houses for want of ready cash. He will be worried by constant efforts to keep his collections up-to-date, every year having to mark off his books some bad accounts incurred by dead beats or by parties who move away and neglect to settle their bills. The customer, too, finding that goods can be had on credit, is apt to buy many articles he would not purchase if he had to pay out cash. The account gradually grows and soon reaches a point where the customer cannot pay without extreme effort, and the merchant dare not refuse more goods in fear of losing the whole amount.

Credit System Develops Waste.

It may seem easier to sell goods on credit, and it may seem possible to charge more for goods sold on credit, but if the merchant sizes up the extra cost of book-keeping, the cost of making collections, the loss on bad accounts, the interest on the money tied up, the opportunities lost by not having his money available for use, and the many other features of the credit system, it will be seen that the extra profits soon melt away, and the readiness in making sales is not an advantage. Why should a merchant conduct a ''private loaning business'' and neglect to demand the ordinary security for his loan, merely accepting his customer's word that he will pay you later—if his health keeps good, if he is honest, if he does not pay some other fellow's accounts first, or if crops are good?

Much better sell for cash and give customers better value for their money, besides doing away with the favoritism which makes Smith, who pays cash, pay for part of the goods Black got and did not pay for. Much better, also, do away with the necessity of spending days and hours book-keeping and account collecting, using this time to pay greater attention to buying, ad.-writing, window-dressing, or to meeting cash customers. Other advantages could be gained, such as the taking of cash discounts, the saving in loss by mistakes in accounts and the prevention of making bad friends by disputes over accounts. Every night or every month, too, the merchant could know just where he was at, and what money he had available for investment or expansion of the business.

The merchant who is conducting a credit business and decides to change to the cash system should endeavor to induce his fellow hardwaremen to take the step at the same time, but he must have the backbone to act himself whether his competitors do so or not. In one Western town several dealers in one line got together, each agreeing to sell for cash only, and putting up a deposit of $300 as evidence of good faith. Where the rule is broken a firm is fined $50 for the first offence, $100 for the second, and $150 for the third; all money paid in fines being given to local charities.

What Steps to Take.

Announcement should be made to all customers that after a certain date all sales will be for cash only. Notices should be posted up in the store, the local paper should be used (both in the reading and advertising columns), and a circular letter should also be sent to all customers. In these announcements emphasis should be laid upon the rigid nature of the new rule, and attention

drawn to the fact that by buying and selling for cash no bad debts will be incurred, and customers can be given better value for their money.

Difficulties will be met, and some old customers may appear hurt at first, only the really undesirable ones will discontinue, and even these will come back on a cash basis if all the dealers refuse them credit. The one thing necessary is a strict adherence to the new rule—that cash or note must be given by every customer before goods are delivered. That done, the rest will come easy, as a dealer who once has had the experience of conducting a cash business will not be satisfied to again undergo the worry and loss of the credit system, the very fact that it is known that a merchant sells for cash only being a protection against dead beats.

From the time that the first merchant discovered it possible to run a store on the cash system credit was doomed, and it is only a question of a few years before the evolution now going on will have made cash universally triumphant over the antiquated credit system.

CASH SYSTEM AT GODERICH.

Last April two hardwaremen at Goderich, E. P. Paulin and C. C. Lee, decided to adopt the cash system and placed the following announcement in their local papers:

> We, the Hardware Merchants of Goderich, feel, after years of hard experience, that the credit business is a failure. The most progressive Hardware Merchants in other parts of the country are discarding the old credit system, and they find that the customers are better satisfied, for a few of the following reasons:
>
> 1st. If the merchant gets cash for his goods he pays spot cash and saves the discount; as a result he is enabled to sell his goods at the very smallest profit.
>
> 2nd. The cash system will enable the customers to buy goods right at home as cheap as at any of the large cash stores.
>
> 3rd. The customer has the advantage of selecting his goods on the spot, thus avoiding the unpleasant and costly plan of receiving wrong goods from the big cash stores.
>
> 4th. Under the credit system the good pay man has to make up for the poor pay man and the man who never pays at all. Under the cash system every man will stand on his own merits.
>
> 5th. There are many other advantages to the customer and merchant. The difference between our present credit prices and prices under the cash system will range from 5 per cent. to 10 per cent.; that is, we well sell goods for cash 5 per cent. to 10 per cent. less than at present. Heavy hardware, nails, wire, etc., price will remain as at present, which are cash prices.
>
> We have decided to adopt the cash system and on the first day of May, 1907, the same will become operative in our respective places of business. We will give you value for your money, and with your sympathetic support hope to convince you that you and we are the gainers by this system.
>
> Signed, C. C. LEE.
> E. P. PAULIN.

Asked regarding his nine months' experience with the cash system, Mr. Lee, on Feb. 5, said he was well satisfied with it as far as he carried it, but the difficulty he experienced was in doing plumbing, tinsmithing and steamfitting, that the customers do not follow the men back to settle. It has, however, been the means of keeping a lot of dead heads out.

"When they come and ask for credit," said Mr. Lee, "we simply tell them we are running a cash business."

"Did you lose any customers by refusing them credit?" was asked.

"We did two or three, but they came back again."

"Were you successful in collecting the bulk of your outstanding accounts?"

"We got in a lot of them by using the Retail Hardware Association's collecting letters but still we have a lot out yet."

"In your opinion, can a hardware merchant with a reasonable amount of backbone adopt the cash system to advantage, even though his competitor still gives credit?"

"I certainly say he can, and if I were running a straight hardware business there would not be a cent's worth of goods go out of the store without being paid for but, as I said before, the other branches of our business make it very difficult for us to keep to the straight cash business."

Western Merchants Adopting Cash System

F. R. Munro Gives the Experiences of Several Merchants Who Have Made the Plunge—Boissevain Hardwareman Sells Coupons, Taking Customer's Note or Allowing Discount for Cash.

Without doubt the most interesting development in the retail trade of Western Canada during the last two years has been the steady curtailment of credit in all parts of the Western Provinces and the widespread introduction of a strictly cash system of doing business. It is not too much to say that there is no town or village in Western Canada where credit can be obtained in the stores as easily to-day as was the case two or three years ago. Credit has been curtailed and made more difficult to obtain in all parts of Western Provinces, and there are many towns where all the merchants have undertaken to shut down on credit absolutely; there are also many instances of a single merchant in a town or village shutting down on credit and adopting a cash system regardless of the action of his competitors. The tendency is widespread and owing to the success with which the cash system is meeting in almost every district where it is given a fair trial, the movement is growing like a rolling snowball.

Long Credit a Curse.

Long credit is the curse of business in all new countries and Western Canada has suffered from the abuses of a system which was, perhaps, a necessary evil in the earlier history of the country. In this respect Western Canada has been repeating the history of Eastern Canada two or three generations ago, when the Eastern Provinces were young; with this difference, that there is every indication that the West is finding the proper solution of the problem earlier in its history, and bids fair to outdo the East in the introduction and maintenance of a cash system of doing business.

Undoubtedly the world-wide financial difficulties of the past year have given a big impetus to the movement, and to a certain extent it is true that Western merchants have made a virtue of necessity. Certain it is that the touch of hard times from which the country has suffered has hastened the growth of the movement, but it also is a fact well-

known to those acquainted with conditions in Western Canada, that the movement had gained considerable headway long before the present financial stringency was dreamed of.

Conditions in many sections were becoming intolerable, even in prosperous times, and merchants could not fail to see that the load of credit which their customers wanted them to carry was unreasonably heavy; farmers had learned in the early years of the country to pay their bills once a year, when their wheat was sold and to expect twelve months' credit at the country stores and having "got the habit," they did not change their custom, when, with the growth of the country and the accumulation of their wealth, they were well able to pay cash for their goods. The situation demanded a remedy, and the shrewder merchants set themselves to the task of finding what that remedy should be.

Retail Associations Helped.

It was mainly because of this unsatisfactory state of affairs that the Retail Association movements made such splendid headway in a short space of time. The Retail Hardware Association of Western Canada very shortly after its organization, undertook to grapple with the problem, and the educational results of the discussions which followed in general and local meetings, was very great. It is true that owing to the financial difficulties in organizing a single line of trade in such a vast territory, that association is not now so active as it was, but the results of its work in connection with the credit evil have been permanent and far-reaching. The Retail Merchants' Association of Western Canada, an organization comprising the general stores and lines other than hardware, also attempted to find a solution of the problem and to educate merchants to adopt the cash system, or, at least, very materially curtail credits. The wholesale houses and the trade press all did their part in the work, and the net result was that in all parts of the country movements were set on foot which boded ill for the credit system.

In many towns and districts agreements were made by the merchants to stop all credit between the months of November and April, the period when money is ordinarily most plentiful. In others concerted efforts were made to establish a strictly cash system of business and in still others no concerted effort was made, but individual merchants decided to demand cash for all goods sold. Then came the stringency of 1907, and the movement already strong, gained much additional impetus.

H. S. Price, Boissevain, Man., one of the shrewdest and best-known hardware men in the West, had a cash system in view for two or three years or more, but it was not until the fall of 1907 that he decided to take the plunge. In conversation with a Hardware and Metal representative in Winnipeg a short time ago, he expressed himself as being satisfied with results achieved up to date.

"The way I figure it," said he, "is that I can afford to do considerably less total business in a year if I can get my money promptly for everything that I sell. I can make as much money on a smaller turnover and have much less worry and anxiety. But I don't know that I am going to have much, or, indeed, any decrease in business, for although a good number of my customers didn't like the new system at first, the great majority see the reasonableness of my position now."

"Last fall when I decided to make the change I took my full list of customers

H. S. PRICE, BOISSEVAIN, MAN.

and wrote them a nice letter, explaining the matter to them as diplomatically as I knew how. I told them it was simply a matter of necessity, that I couldn't afford to carry accounts for a year at a time, and that I intended starting a new system with a rule that would apply to every customer."

Credit Customers Buy Coupons.

"Some of them still wanted credit, and, finally, I hit upon a compromise. I have a system of coupon books, and when a man wants credit I sell him a coupon book for $50, $25 or $10, and take his note bearing interest for the amount. I part with my goods only for cash or coupons; I carry no book accounts.

"Then it occurred to me to sell coupon books for cash, allowing a discount of 5 per cent. on a $50 book, and 3 per cent. on a $25 book Even in this year of financial trouble I have sold some of these books for cash, and in an ordinary year I could sell more of them"

"Selling for cash enables me to sell on a closer margin, and I am able to show my customers that they are saving money under the cash system

"I find a very friendly spirit towards me among merchants who have not yet established a cash system, and several have assured me that they are only waiting to see how I get along before inaugurating some such system themselves."

Deloraine Merchants Pleased.

Montgomery Bros., of Deloraine, conduct a large general store business, and some months ago they decided to start a cash system regardless of what their competitors might do. They established a cash system on their own initiative, and made no agreement with their competitors.

In a letter to Hardware and Metal, under date of Feb. 17th, they expressed themselves well satisfied with results obtained. "Our reason for starting the cash system," they say, "was the large amount of money which was practically taken out of our business for several months in the year, which made it difficult to finance and pay cash for our goods, and the large amount of time required by our manager in looking after the credit business to prevent losses."

They state that they insist strictly on cash payments from all but three customers. These exceptions are two hotels, making weekly settlements, and a lady who orders over the 'phone and pays promptly at stated intervals. They expect that the critical time will be during July and August, the period when most people in their district usually want credit.

Indian Head Merchant's Effort.

C. T. Laird, Indian Head, is a hardware merchant who has greatly curtailed credit, but is not doing a strictly cash business. In a recent letter to Hardware and Metal he explained that local competitive conditions made it practically impossible for him to put his business on a strictly cash system, as he would like to do. He has, however, shut down on credit to all but elevators, mills, contractors and the Government.

"I may have lost some customers," said he, "by refusing to give them any further time accommodation, but I feel that it is better to lose the customers than to lose the goods, as in many cases I should do if I allowed credit. I may have lost some customers, but I am sure that I would not have lost them had they not been able to get credit elsewhere."

"From the appreciation my customers are showing for my cash inducements and what they say in regard to

the cash system, my short experience in running what is practically a cash business has convinced me that if the merchants would all hold out for a cash system it would be much more satisfactory for all concerned. I hope to see the cash system thoroughly established in this country."

Mr. Laird is having the usual difficulties that beset any individual merchant who establishes a cash business, while his competitors still give credit, but he seems fairly well satisfied with the results obtained.

A Fifteen Months' Trial.

Theodore Miles, a hardwareman in Kamsack, Sask., adopted the cash system fifteen months ago, and now has no use for credit. In a letter to Hardware and Metal he stated that he adopted the cash system on his own initiative, and had no understanding or agreement with his competitors.

"I insist on getting cash from every customer," said he. "I can see no reason for making any exceptions. I wouldn't make an exception for a man who isn't able to pay, and I see no reason for making an exception for the man who has the money. The better the customer the more reason why he should pay at once.

"I adopted the cash system because I was losing all my profits on bad debts, and now I would not think of going back to the old system. I have had many customers tell me they are glad I started the cash system, for they have been able to get along nicely without credit, and now are glad that they do not owe me anything."

Other Experiences.

A year ago the dealers in Cartwright, Man., adopted the unique plan of forming a joint stock company to take over all their various stores and businesses. "Merchants, Limited," as the new firm is called, has, of course, eliminated all competition in the town, and by selling for cash only has been able to reduce prices very materially, thus aiding in the fight against the mail order houses.

Hamelin Bros., with their big string of stores, extending through Manitoba and Saskatchewan, adopted the cash system last fall and are well satisfied with results.

Instances of the kind might be multiplied at great length for the movement has spread all through the West; but these will serve the purposes of illustration. There is no doubt that one result of the financial stringency of the last few months will be to place the retail business of Western Canada permanently on a sounder and more satisfactory basis.

Two Years' Experience at Regina

W. K. McInnis Describes the Cash System Adopted by the Regina Trading Co. in 1906—Customers Pay Accounts in Advance.

"Would it be advisable for me to adopt the cash system?" is a question which at some time or other confronts every merchant, especially in Western Canada, and the merits of the business run on a cash basis, as compared with those of the business done on the credit system, are constantly under review. With many the question never seems settled, as there are advantages to be cited in either system. But so far as one of the leading mercantile establishments of Regina is concerned, the question is settled once and for all. The

J. F. BOLE, M.P.P.
Manager Regina Trading Company.

store referred to had reduced the cash system to a science, and to-day the richest man in Canada could not secure goods there without the cash. How the system is worked out is, of course, the interesting point, and one which will bear explanation here.

At the outset, it may be stated that the store referred to, the Regina Trading Company, Limited, does the largest business of any store, not only in Regina, but in the Province of Saskatchewan. Its trade, by means of the mail order system, had been spread throughout the length and breadth of this Province, and in Regina the store carries a stock that can only be duplicated at Winnipeg, Toronto, or other large cities. The reason for all this is found in the cash system which was introduced two years ago.

With the commencement of 1908, the Regina Trading Company entered the third year of business under the cash system, and the manager sums up his success in figures which sound almost too large to be true, and in words which are glowing tributes to the pay-as-you-go plan in operation there. During the two years of operation under the cash system the business has grown by leaps and bounds, and the store that started on a modest scale is to-day the busy hive of commerce, its spacious departments thronged with people from morning till night, and hustling clerks handling their trade, taking in the money for each transaction, and every sale marking an addition to the cash receipts which in the evening will be totalled up. Two cash girls are required to handle the business, and even during dull times such as have been experienced throughout the West during the winter months, they have been taxed to capacity.

Felt Need of a Change.

The Regina Trading Company introduced the cash system at a time when affairs had reached such a stage that there was need of a move of some kind or other along a new line. Three years ago the management felt that some change must be made, and it was decided to give cash discount of five per cent. off the marked prices. Goods were all plainly marked and those taking credit were charged full price, while those desiring to pay cash could secure five per cent. discount. It was thought that by the introduction of this scheme the number of book accounts could be greatly reduced. But what was the result? That it was not satisfactory can be judged because after a year of this system another change was made. The experience of the management with the five per cent. cash discount scheme was that those customers who would pay cash anyway, took advantage of the discount, while those who were in the habit of running book accounts with a firm took the credit and paid for their goods at regular prices, apparently thinking that little was to be gained by endeavoring to pay cash and getting the discount.

But under this cash discount system business was growing rapidly just the same. The city and the Province were advancing and large numbers of new people were coming in to the district. It was easy to see that to continue to do a credit business would be to get more

on the books than they would be able to carry with the banks.

Could Afford to Lose Money.

In November, 1905, it was estimated that the firm had book accounts to the amount of $60,000, and this was steadily increasing, for every day someone asked for credit, and every day a new account was opened, and some days there were a good many new ones. It was estimated that they could afford to lose $40,000 off the annual turn-over, and still make as much money under the cash system as could be made under the credit method of doing business. It was a bold step to take, and one which required a great deal of courage, but after due consideration, the management decided that on and after January 1, 1906, the business would be conducted on a strictly cash basis.

Everyone Knew of It.

Means were taken to make everyone acquainted with the change proposed, and through advertisements in the Regina papers the announcement was made that there would be no credit after January 1. Every customer whose name was on the books of the company received a circular informing him of the change, and requesting that the balance standing against his name be cleared up. Through the medium of the daily and weekly press of Regina the announcement was also made:

New Rule in Force.

The new rule was strict. All goods had to be paid for at the counter or on delivery, and system of c.o.d.'s was introduced. This was reduced to the simplest scheme possible, and is found to work exceedingly well. However, the management knew the convenience of the charge system, and decided that there must be some substitute for the straight monthly account—some means devised by which people could telephone in orders and pay for their goods monthly. After many suggestions and much consideration they adopted the plan of demanding the cash in advance from the customers who desired their goods without payment at the counter. This at first appeared to be a most extraordinary request for any merchant to make, but as it has worked out it will be seen that it is proving quite satisfactory to all who have adopted it. Customers who desired their goods charged up were required to make deposits at the first of each month, a credit entry being made for the amount, and four per cent per annum added to the daily balance. When the customer with such a deposit account desires goods he places the order with the clerk, the counter check is sent through, marked paid by the cash girl, and returned to the clerk to have the order filled,

At the first introduction of this system some customers kicked. There were those who had always been good patrons of the store who got on their dignity at a demand for cash, and said they had always been able to get credit, and could get it elsewhere if the Trading Company would not give it. The management had expected that there would be some customers take this view, and although it was pretty discouraging to see one after another good customer refused credit and withdraw his trade, they never gave in to anyone The first refusal of credit was to the City of Regina. The rule was made to fit everyone, and when the corporation applied for credit, it could not be secured. They went elsewhere. The next large customer refused was the Government of the Province of Saskatchewan, for even that institution could not secure a line of credit at this store. It is to this feature of the system that special credit for its success is attributed: favors were granted to no one and no one could get goods on time.

Deposit Account System.

Further explanation of the deposit account system will not be out of place here. A book is kept in the cash desk for each depositor, run after the fashion of an ordinary bank pass book. When a deposit is made the amount is entered up just as is done in dealing with the bank. Lists are posted in the different departments showing the names of those who have deposit accounts, and from this list each clerk takes his instructions in the main. When a customer having a deposit account makes a purchase, the clerk makes out a bill in the counter check book, this being sent in over the cash carriers to the girl in the cash desk. If the depositor still has a balance to credit, the girl stamps the bill "paid" and sends it back to the clerk. After this procedure is gone through the clerk puts up the goods, but he is not allowed to do so until the cash girl has placed her stamp on the bill. In this way the responsibility for seeing that customers do not overdraw their accounts is placed upon the cash girls, and their part in the deposit account system is no small one, requiring as it does accuracy and integrity.

When the bill for the goods is stamped "paid" by the cash girl, she immediately enters in the debit column of the deposit account book the date and the total of the bill. The duplicate part of the bill goes to the office, and there lady clerks enter on the ledger account the purchases, item by item. A loose leaf system is employed for this purpose, and at the end of each month the depositor is sent a statement showing the goods purchased with each bill, and the balance, if there be any, to his credit. A statement of the total of each bill of goods is also sent. The deposit book is returned with the statement, and the customer thereby has the means of checking off the items and assuring himself of the accuracy of the charges

Street Scene Showing Regina Trading Co.'s Store.

made against his deposit account. By the use of carbon a copy of the passbook is also kept on file at the office.

Cash on Delivery System.

The c.o.d. system is handled in this way: There are customers who telephone orders, but who do not keep any deposit account. Their goods are delivered to them with c.o.d. slips attached, and the delivery man collects or brings back the goods. Each delivery man is given $10 in change, which he carries at all times. When a clerk takes an order over the telephone or at the counter for c.o.d., the duplicate of the bill goes into the cash desk and is filed on what is known as the "C.O.D. File." The clerks are furnished with large red stickers marked "c.o.d.", on which there is space for the address and the amount of the bill to be collected, the bill of the goods always being attached to the parcel to ensure no mistake being made. The duplicate bill, which was sent to the cash desk by the clerk, is taken from there to the office, and the bunch of these is separated into districts, one district for the route of each driver. In the morning each delivery man is required to cash-in the amount of his previous day's collections, and some times these men carry over night as much as $40 or $50, or even more. To secure men who can be held responsible for this work, the store must pay top wages, but it is found that in the end this pays, and the Regina Trading Company has never yet lost through an absconding clerk.

Result of System.

The result of the introduction of this very complete system has been most satisfactory. After two years' trial it is found that instead of losing $40,000 in volume of trade—which it was figured could be dropped without losing profit—during the first year the cash system was in operation, 1906, the business showed an increase in volume of $80,000 over the previous year, and the year just closed, 1907, showed an increase of $100,000 over 1906, or $180,000 over 1905, the last year the credit system was in force, and the year during which the five per cent. cash discount was allowed. Another most remarkable feature of the business of the Regina Trading Company is that during 1906 there was never a month that did not show an increase in business over the corresponding month of the year previous, and during the year 1907 there was never a month that did not show another increase over the corresponding month of 1906. When one considers the times of financial depression through which the country passed during the closing months of 1907, this statement is the more remarkable.

The Man Behind.

The man who has accomplished things as set forth in the foregoing is J. F. Bole, M.L.A., manager of the business of the Regina Trading Company. It is not without some degree of pride that he looks back over the past two years and views the success which he introduced with the cash system, and he has not the slightest hesitation in recommending to other merchants the adoption of a similar style of business. The details, he said, must of course be worked out to suit the needs of the community in which business is being done, but the principle is always the same, and he believes that what the Regina Trading Company has done, other stores can do. In conversation with Hardware and Metal's representative, he remarked that the great secret of his success has been that he gave in to no one. Had he granted any favors and given credit to individuals, the first effect would have been to demoralize the staff of the store, and if the manager started to do such a thing, the clerks would be tempted to do the same. The very people to whom the favor of credit might be granted would be the first to lose confidence, and sooner or later others would learn that such favors were being granted, and they, too, would lose confidence. By refusing the requests of everyone, the management at first lost customers for the store, but the greater part of these have since recognized the value of the monthly deposit system or of paying cash, and they have nearly all returned with their trade, admitting the rule adopted to be the best one. Had the old credit system been continued, Mr. Bole says, instead of having no accounts on the books now, there would be $100,000 or more, and this would be more than the store could carry. Making people thoroughly acquainted with the new system of business was an important factor in the success of the undertaking, and another feature which helped along the business was that the store was able to and did sell cheaper than competitors were selling. They could afford to do this because there were no bad debts, and they knew that every time the carriers came to the cash desk they contained money and not additional bills to be charged on long monthly accounts.

Great Help in Financing.

There is another feature of the business which will be of great interest to merchants. The deposit account system, bringing in as it does large sums of money each month, provides a great assistance to financing. The depositor bringing in a deposit of $100 on the first day of the month is credited with $100, plus four per cent. per annum for the 30 days, or total of $100.33. On the day the depositor makes this payment of $100, the store probably has a bill of goods for $100 coming due. To pay this bill promptly would be to save the trade discount of five per cent. and with the depositor's $100 the store pays the bill of goods, securing five per cent. discount. In this way the depositor secured $100.33 for his even $100, and the wholesaler secured $95 in settlement of the $100 bill of goods. The store, on the other hand, having paid 33 cents for the use of the customer's $100 for the month, saves $5 by paying the bill due, and makes a net profit of $4.67 on the transaction, in addition to securing payment in advance for the goods sold out of the store and doing away with endless bookkeeping entailed by the credit system.

This is a feature which is well worth the careful consideration of every merchant, for by it he is enabled to finance almost without the assistance of the banks, and to carry stock varied in quality as well as in quantity, which he could not handle under the monthly account system.

THE BUTCHER WANTED CASH.

A little girl went into a hardware store and said: "Ma wants a paper o' tacks and a hammer, an' says she will send a half dollar around when pa comes home."

"Very well," replied the hardware man.

"But," continued the child, "ma wants the change out of the half dollar, so she can get some pork chops for lunch."

ANOTHER FIRM ADOPTS CASH.

Charles C. Wright, successor to James Wright & Son, Strathroy, Ont., is another far-seeing hardwareman who has discarded the credit system, and after April 1 will be conducting his business on a straight cash and note basis. The terms made known in a large half-page advertisement in the Strathroy Age in February and March are:

General hardware—Cash.

Wire—Three months' note.

Stoves—Four months' note.

Binder Twine—Oct. 1 by note or cash.

Factories—Three months.

Painters, Threshers, Pumpmen and Blacksmiths—Four months.

Builders and Contractors—When job is complete.

Farm Machinery, Windmills, Buggies, Wagons, etc.—One, two and three payments to suit purchasers.

Some Canadian Hardware Stores

Changes of Half a Century—Descriptions of Some Pioneer Canadian Stores—Difficulties Met With in Early Days and How They Were Overcome—Description of Store Built on Square Plan.

Changes Made in Fifty Years

Live Traders of To-day Will Do Well to Compare Existing Conditions With Those of Half a Century Ago.

In the Old Country half a century ago, the ironmonger (he was not called a hardwareman then) was almost proud of his antiquated shop with two small bow windows, entered by one or two steps from the street. The window frames, with small panes of glass, helped to prevent a too critical inspection of the contents of the window, which remained, in season and out, without much change. Cleaning the window was the event of the season, and when "spring cleaned" and the copper kettles, seldom sold, which had gone black, had been polished by the one workman—a tinker who knew how to make a copper furnace pan, too—and replaced by the assistant who had become grim and black in removing the dirt and dust of the previous half year, the window was ready for inspection. In those far-off days there appear to have been two kinds of window dressing—one which consisted in the display of a few articles which, like the chemists' jars and huge bottles of colored water, might be said to be symbolical of the trade, and the other type which made the shop window a dumping ground for all and every sundry for which there was no proper place, and especially for those articles which were never called for. The early ironmonger's shop reeked with the smell of oils, paints and colors—kerosene and colza were the burning oils, afterwards followed by paraffin, a shale oil of many undesirable qualifications.

Neglected Windows.

The change from the window just described to the plate-glass one divided into some three or four sections was very marked, but the window dressers of the seventies and eighties did not rise to their opportunities, and evidently thought that such advertising efforts were beneath their attention and best left to drapers, whose assistants, termed in derision "counter jumpers" from their activity and efforts at smart salesmanship, were looked down upon by the ironmongers' assistants, who thought it more dignified to stand behind their counters and to await the call for locks, nails, paints and, perchance, brass-foundry. Market days were looked upon as a "rushing time," and every week for a few short hours the hardwaremen of those days in all the war paint of black aprons and sleeves, sought to satisfy the inroads made upon their stock by farmers and country folk who had plenty of ready money wherewith to fill the hardwareman's till.

The evolution in stock seems to have been almost as slow as the methods of procedure, yet the advance toward the conditions of trading now prevailing was being steadily made all the time. There is scarcely a single article or group of articles the same to-day as forty, thirty, twenty, or even ten years ago, and the nearer the present time was approached the quicker the pace became. Take a few things as specimens. The harvest is over, and its ingathering has been accomplished by reapers, binders, mowers and all those beautifully finished and delicately contrived labor-saving contrivances, for the manufacture of which America is celebrated. Look back at the days when ironmongers sold over their counters the crude scythes and sickles, wooden hay-rakes and clumsy pikels, which were the sole tools used to assist manual labor at harvest time. The sickles and scythes were sharpened by the whetstone, but the hum of the machine was unknown.

Evolution in Tools.

Turn to the workman's kit and learn how few were the tools he needed in the past! The skilled mechanic to-day needs, or fancies he needs, all the modern tools which inventors in America and other places have provided him with, and his workshop is fitted with wood-working machinery and, in common with the village wheelwright, blacksmith and builder, has power to work his machinery. The hardwareman's workshop is not now complete—or indeed is he able to compete with his fellows—unless he has a gas engine or possibly a dynamo and electric power and light. His plant includes lathes, bending and turning machines and presses, and elaborate tools wherewith to shape the metal he manipulates. What about the days when the tinman hollowed his saucepan lids and kettle tops by hand upon a wooden hollowing block, and bent his stove pipes over a wooden mandrill, forcing the grooves into place by sheer exertion of hand and foot? Brute force was a necessary qualification of the workman, and skill and knowledge of mechanics played no part in the shop of a quarter of a century ago.

Wonders Worked by Evolution.

In every branch of ironmongery evolution has worked wonders. The kitchen necessaries of to-day are legion compared with those of a former generation. The beautiful vessels of light steel, aluminum and enamelled ware, take the place of the three-legged iron pot, the cast saucepan and heavy brass maslin. The wooden spoon and common iron meat fork were clumsy indeed compared with the light tools the present-day cook has at her disposal. The open fire wasteful range, the old hog grate and the forest sham gave place to cooker, portable stove, and the quick-heating, economical ovens of to-day. What stronger evidence of advancement can be given than that of lighting contrivances? The moderator lamp, the argand, the flat wick oil burner, and the bat-wing all-iron gas burner, where are they? Do not some of the elderly people still living gaze in wonder at the marvels of incandescence, the electric arcs and the shadowless burners, by the aid of which illumination of the highest order is now produced? These few instances quoted surely serve to demonstrate the reality of the progress made in the goods sold by hardwaremen.

The Stores of To-day.

The old-world shops have undergone changes scarcely less conspicuous than their contents. The high counters, oddly contrived fixtures, dusty shelves and cupboards, have given place to air-tight cases, polished counters and smart showrooms, all tastefully set out. The stores wherein hardware may be bought to-day are really pleasant places compared with old-time haunts. The goods are sold ready packed, boxed and fitted with all necessary screws and nails, so that the labor of the clerk and user

may be minimized. What of the vendor, his salesmen and clerks, may be asked; have they stood still? No, they, too, have improved, and shot ahead with marvelous rapidity, and especially during recent years. The story of progress which has been going on in connection with every branch of hardware trading with traders, and to a large extent with customers, too, is true of the hardware store in city and up country. The old-time galvanized iron hardware store so common a few years ago is not to be found. Cities everywhere are now built on improved plans, and stores are assuming universal similarity in appearance, in methods of procedure and in the employes who handle the goods.

ARRANGING THE HARDWARE STOCK.

Competition in all lines is now so keen and brisk that no careful hardware merchant will let his efforts to be at the top of the heap cease with the careful buying of his goods and attractive advertising. Every such hardwareman realizes the value of having his store attractive in arrangement and clean and neat in appearance. As one man put it at a recent convention, "There are thousands of hardware stores today that are as clean and neat as a jewelry shop." One reason he gave for this welcome change from former conditions of chaos and disorder was that so much hardware buying is now done by women. However dull and lacking in the artistic one may consider a hardware store to be under normal conditions, yet the merchant can no longer afford to fail to make his store attractive to the prospective customer. It is necessary to please the eye of the buyer.

First of all a handsome and artistically arranged window display, showing a modern line of goods, clean and bright, will make a valuable impression on the passer-by. He will study the display of such a window when he would not give a second glance to a badly arranged hardware assortment behind a dingy window, dirty and unattractive. Even if he is not in the market for hardware, the sight of an artistic layout will please him, and the first time he needs something in the hardware line the chances are ten to one that he will drop into the store whose window shows a spirit of progressiveness on the part of the proprietor.

Once in the store, the customer will be impressed, either favorably or unfavorably, with his surroundings. Neatness, cleanliness and convenience in the arrangement of the goods give the customer immediate confidence in the store and its proprietor. Further, these attributes please the eye, make his stay a pleasant one, and incline him to return for future purchases. On the contrary, a store which has the appearance of confusion is an annoyance to the customer. It makes him scorn the whole establishment, spoils his temper and makes him several times harder to please than would have been the case had his surroundings been agreeable, If it is necessary to keep him waiting for a few moments, through stress of business, he has the more time to see the confusion and chaos. The wait does not improve his temper, and, having nothing but unpleasantness to look upon, the chances are favorable to his leaving the store in a bad temper without purchasing anything. Not only does he thus become antagonistic to the store, but a vision of the badly managed store is apt to come up in his mind several times during the day, and he is likely to tell his friends about it, and influence them against that shop.

Even in a small shop the careful merchant can arrange his stock so as to make a comprehensive display, yet maintain neatness. There is a decidedly commercial value in the careful arrangement of stock, for a moment gained in reaching the article desired by the customer oftens results in a sale to other customers in the store, who would have left had there been a long delay in filling the first man's order.

A few hours spent in a careful study of how every inch of space in the store may be utilized to best advantage will pay the proprietor many times over. It is just such points as these which puts one store ahead of its neighbor.

THE OLD HARDWARE STORE.

The small boy, barefoot, stood in awe
  Before the counter glazed with age
And marvelled at the things he saw
  From kitchen stove to parrot cage.
The glistening show case held a host
  Of treasures fit for any king;
The guns in autumn pleased him most,
  And fishing tackle in the spring.

Odd racks there were, and corners gray
  Where implements of farming stood;
The scythes, the plows, the forks for hay
  And buckets made of yellow wood.
The ceiling hung with nets and twines
  'Mid baskets, hallowed by the dust,
And maybe, some great wheel'd machine
  Bespoke rich harvests, spite its rust.

Ranged yonder long the seed box stood,
  Stuffed full of bulging envelopes—
Of luring tints, with these you could
  Bring beauty to your garden slopes.
The mellow tinkle of the bell
  Guarding the cash drawer, was as sweet
As songs of birds we loved so well
  Out in the elm-arched village street.

The keeper, ruddy-faced, and stout
  Stood at your bidding, in the aisle;
"Hooks? Sinkers? Sure there's some about."
  And blessed you with a cheery smile.
And then the green-clad boxes there
  Split out with loaded shells or shot;
What joy to own them and prepare
  An "All days' hunting" like as not.

It mattered little if 'twere tacks
  Or missing part from stable "rig"
We found them here, in pairs or stacks
  The smallest or the very big.
The village "Horn of Plenty," this
  Rich in its usefulness—and more.
Perchance the modern age will miss
  The good old country hardware store.

"The Old Hardware Store."

ESTABLISHED 56 YEARS AGO.

The firm of T. McAvity & Sons is the oldest in St. John in the hardware trade. The house was founded in 1852 by the late Thomas McAvity and in 1870 the present designation was adopted, the present co-partners being Thomas McAvity, James H. McAvity, John A. McAvity and George McAvity, sons of the original founder, who died in December, 1887. The business was started as a retail hardware store but now the firm controls not only an extensive wholesale and retail hardware business but also several foundries.

The wholesale and retail store is on King St., a four-storey brick building 50x100 feet. On Water St. they have a factory and store, three floors in height, of the area of 50x200 feet, as well as a warehouse on the same street 70x100 feet. They also have another warehouse 75x30 feet. The Vulcan Iron Works, which is owned and operated by the firm, comprise three buildings, covering a space of 300x100 and includes the machine shop, molding and pattern shops and out buildings.

Employ a Large Staff.

The manufacturing departments are fitted with the best of appliances, and employment is furnished altogether to about 200 operatives. In the store and warehouses the services of about 75 to

100 salesmen, assistants, teamsters and others are utilized.

The firm are wholesale and retail dealers in hardware of every description, also oils and paints, glass, cement, metals, cutlery, sporting goods, leather and rubber belting, etc.

In the manufacturing departments the firm are manufacturers of iron goods, such as valves and pump and pipe fittings for various industrial purposes, also brass goods for steam fitters, plumbers, locomotives, etc.

Hard work, keeping eternally at it and close attention to all details, have contributed to their success.

Vancouver's Pioneer Store

R. B. Bennett Tells an Interesting Story of the Development of McLennan, McFeely & Co.'s Business From a Frame Shack to a Modern Five-Storey Building in 22 Years.

With the development of the Coast country, it is gratifying to note the expansion of the pioneer hardware firms, and this steady growth has a tale of success of which is interesting. Perhaps of all the dealers in this part of the Dominion, none has succeeded more as a result of enterprise and building on the hope of the future than Messrs. McLennan, McFeely & Company. Com-

Vancouver's Pioneer Hardware Store, Erected in 1886 by McLennan, McFeely & Co.

ing to Vancouver, even before the city was any more ahead than Prince Rupert is at the present time, they took advantage of every opportunity, and today they stand pre-eminent as a hardware firm in British Columbia, and a magnificent five-storey building, just completed, attests the success of their business methods.

Pioneer retailing in Vancouver in 1885 was not the most promising business. What is now a prosperous city of 70,000 people, of various nationalities, was then but the merest settlement. There was no railway even, and speculation was centering around Port Moody, twelve miles further toward the head of Burrard Inlet, as the western terminus of the Canadian Pacific Railway, at that time nearing completion. Two sawmills, one in the east end of the townsite, and the other on the north side of the Inlet, were the chief, in fact, the only industries.

When Courage Was Needed.

In June, 1886, some months after this firm started business on the mainland, Vancouver, incorporated but two months, was so small that a fire was able to devastate the whole. In those days, it was taking a cast with fortune, a sort of win all or lose all. Vancouver went ahead and with it went the men who banked all with the city. Even after the Canadian Pacific's first train arrived in 1887, the future was by no means so plainly evident as to encourage every line of business. Talking with the men of to-day, who have been here since those days, it is a common remark: "If I had only known what would happen with the years I could easily have been a rich man with very little initial outlay."

But those who staked their all and with each year's advance moved forward as the city grew, these men today are numbered among the successful ones. Vancouver then might be compared with Prince Rupert now, but the coming terminus of the North has this advantage: Prince Rupert starts to grow along the same lines that others have grown. It is not a pioneer, but comes after Tacoma, Seattle and Vancouver. It has, moreover, a tributary territory that was not here twenty-two years ago.

The Pioneer Business Remains.

A glance at the first building of Messrs. McLennan, McFeely & Co. will enable one to form an estimate of the amount of business done at that time. With one or two sawmills bringing their supplies principally from the United States, and anything else outside the embryo city supplied by the older established houses in New Westminster and Victoria (which had been on the map for twenty years), all the available trade centred in the growing town. True, building was going on, but outside that there was only the casual needs of the people in the community. In 1888, the city officials placed the population at 6,000 odd, and at that time Thos. Dunn & Co. and A. Tye & Co. were also in the field, with another firm, A. Godfrey & Company, just establishing. To-day, McLennan, McFeely & Company stand alone of all the pioneers, the only other connecting link being Wood,

Retail Store Erected in 1886 by McLennan, McFeely & Co., Vancouver.

Vallance & Leggatt, who took over the Dunn business when it failed a few years ago.

There will be many readers of Hardware and Metal who know what courage it takes to start in a new place. It is a burning of the bridges, and more so when it is even beyond the fringe of civilization, for, outside of New Westminster, Vancouver was the only spot on the map of the mainland of British Columbia. Victoria was a city and in

good shape in those days. Donald, on the main line of the C.P.R., was a rushing place. To-day, Donald is a cluster of deserted shacks which are crumbling with age and neglect. An instance of what the chances were on the mainland may be given from the experience of a pioneer druggist, who came over from Victoria. In 1885, he was with the main wholesale drug house in the Province, one that had succeeded, and with the best of prospects of continuity. When he asked the principal for credit for a stock to go to Vancouver with, the reply was: "Take it, my boy. Remember when you come back in six months you may come on again."

firm kept pace with the advancement. This enterprise may be cited as the almost sole basis of its success. The store on Cordova Street, now retained for retail purposes only, was not erected with the sanguine assurance as the magnificent new warehouse, and the history of twenty years, especially the earlier portion, contains reminiscences which are interesting to the venturers in the light of later success.

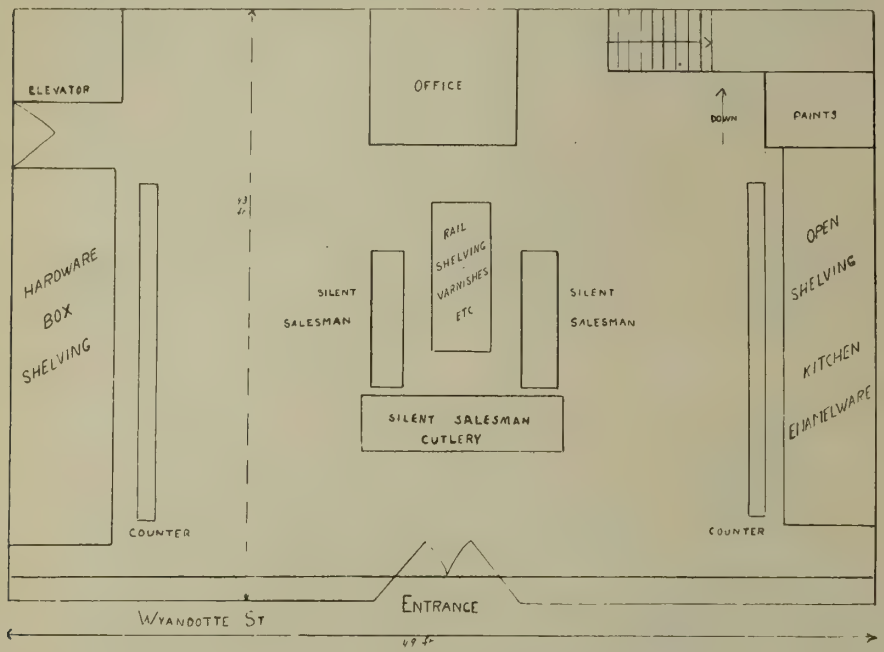
The first years were slow and unencouraging. A resident of London, England, who came here in the early nineties to speculate, bought some property. Two years later he returned to sell his holdings, as he considered that Vancouver was no place for investment. It looked good, so he bought another lot or two. Three years later, he again returned to dispose of what he had, and was in doubt. He decided to hold on, and holds on to this day. During the last few years, however, he considers that holding property in this city has passed from the speculative stage to that of the investment. His experience is indicative of the feeling of that time.

the start of prosperity in the Coast cities, and here again may be noticed that taking advantage of opportunities which has marked the progress of those who lived in the new country. McLennan, McFeely & Co., grabbed a few grips full of hardware and joined the procession over the Chilkoot Pass to Dawson, where they eventually established a large store, and, incidentally, Mr. McLennan was the first mayor.

Between 1885 and 1897, the Province had been growing gradually, and the firm began to do business with the merchants outside the city. This was the nucleus of its wholesale business, which has now grown to such propor-

New Wholesale Warehouse Erected by McLennan, McFeely & Co., Vancouver.

Yet, it was to such a place as this that the members of this hardware firm came and cast in their fortunes, or, at least, the basis of their fortunes. Mr. McLennan came from Nova Scotia, and Mr. McFeely from Ontario, below Toronto, and being Canadians, staid with Canada. The town at that time was centred around the Hastings sawmill, still in operation, but after a while it grew westward, and with this expansion of the city the firm moved. In the accompanying illustration may be seen the brick building erected on Cordova Street, in 1888, and which is still used. It was a pretentious affair in those days of frame shacks, but it shows how the



Branch Established at Dawson.

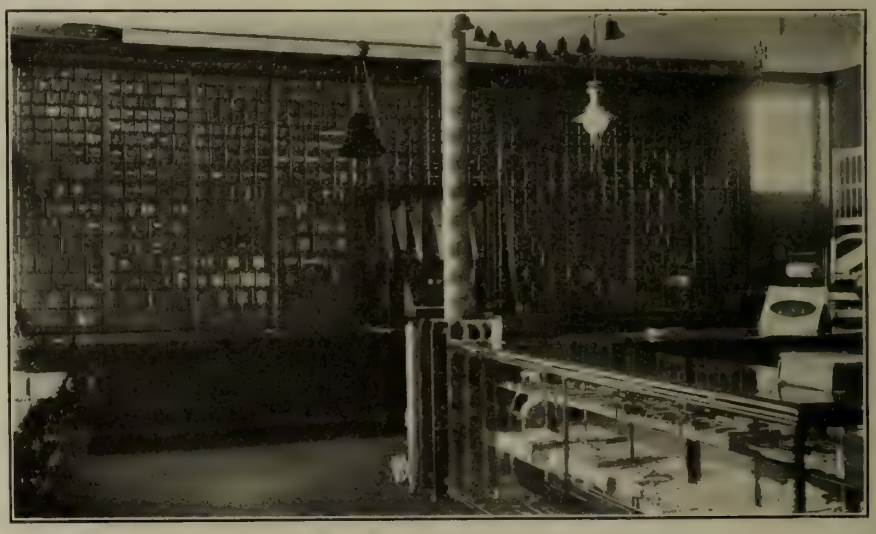
The first real jump, following the great depression of 1893 was the discovery of gold in the Yukon. It was

tions that it is the intention to cast off the retail altogether, and that is now being offered for sale. With a store at Dawson, McLennan, McFeely & Co. were able to trade directly and indirectly with the North, and to their credit it may be said that they were factors in wresting the business from the merchants of Seattle, the city which was built up on the trade with the gold from the Canadian Yukon.

After this, the retail and wholesale businesses were separated, and the illustrations show where the various stocks were located. These were occupied until the beginning of the present year, when they moved into the hand-

some new building excellently shown in the accompanying cut. This structure is 175 feet on Cordova Street (two blocks and a half east of the building erected in 1886), and 122 feet on Columbia Avenue. It is of brick and concrete, with mill construction interior, five storeys high and basement extending under the sidewalk on both sides. The six floors combined make up over three acres, and while not prepared to state it is a fact, yet McLennan & McFeely are inclined to the belief that it is the largest single structure of its kind erected in Canada for the hardware business. They do maintain, however that it is the most modern hardware building in the Dominion. C. P. R. trackage runs along the rear, and goods may be loaded or unloaded quickly through wide doors or directly on to the elevator.

Plan of the Walkerville Hardware Company's New Store, 43 x 49 Feet in Size.



System in the Warehouse.

The equipment consists of three Otis Fensom elevators of two tons capacity, with platforms 8x10 feet. A wide driveway runs through the building so that teams drive in on Cordova Street, pass over the ten-ton track scales in the floor, turn the corner and then driving the entire length of the building, pass two elevators and make their exit on the Columbia Avenue side. This arrangement obviates an immense amount of labor in handling goods, as iron and steel are dropped off immediately at the racks or pit, and goods for other floors are thrown from the drays on to the elevators. This is quite a feature here, because most of the heavy goods, such as iron, steel, chain, sheet metals, wire rope, etc., arrive by steamship from Great Britain, and are brought from the wharf by teams. To handle wire rope, which is a large business amongst the logging camps, a ceiling trolley is being arranged for and at the present time an electric winding machine, operated by one man, coils or uncoils these large reels. A shingle band cutter is also run by electricity. Bowser oil pumps keep the building clean and safe. The packing room being overhead, a chute brings the goods ready for shipping quickly to the shipping room below. The floors are all well stocked with different lines of goods from nails and rope in the basement to stoves and tinware on the top floor. A finely lighted tin shop is also on the top floor, where are manufactured large numbers of air-tight heaters, steel ranges and other ware.

The staff consists on an average of about seventy-five, and an electric gong on each floor, rung from the registering clock, informs them when it is time to being and time to quit work. Asked to their methods and how they accounted for their present position, they stated that they had no set ways and considered that they had just "growed," like Topsy, with the country. This, however, was done with the assistance of a loyal staff. Having an optimistic belief that Vancouver will before many years be the third, if not the second city in the Dominion, they think they are warranted in piling up bricks and mortar. As business increased, new departments were created, and men placed at their head, and without being interfered with, were made responsible for the success of the departments. The profits of each department are kept separate, and the results tell the tale. Believing that young men trained with the firm are just a little better than any others, McLennan, McFeely & Company endeavor to give such employes the advantage, and most of the heads of departments and those holding responsible positions are filled by those who came to the firm when boys.

System of Invoicing.

The system of invoicing adopted prevents mistakes. After an order is filled and the order sheet comes into the office, it is priced, after which the invoice is made out on the typewriter to the same extent. The order sheet and invoice are each given to a separate clerk who extend them by hand, add them up and compare their totals. If alike, it is hardly possible there can be a mistake. The costing department immediately "costs" each item (which is a check on the price clerk), extends and totals them and before an invoice goes out the profit is ascertained. The system costs a little, but the firm states that it pre-

Shelf Boxes and Counter Looking from the Door of the Walkerville Store.

vents mistakes and the satisfaction is worth the money.

McLennan, McFeely & Company have had a staff working on a catalogue for two years. Like their building, they claim it will be the most up-to-date in Canada. It will be loose leaf and the one thousand copies will cost $15,000.

Large Display Windows in the Walkerville Hardware Co.'s New Store Building.

STORE BUILT ON SQUARE PLAN.

One of the most modernly constructed hardware stores in Canada is the new store occupied about a year ago by the Walkerville Hardware Co., at Walkerville, Ont. Laid out on the square plan large windows are available for display, while the store interior is most compact and neat, just the kind of a store to strike the fancy of women customers, the business being now located in a residential district where the trade of the women must be an important factor.

The store was originally located on Sandwich St., near the post office, but owing to the greatly increased business, they were compelled to move to much larger quarters on Wyandotte St. where the Walkerville Land & Building Co. had erected a magnificent block of stores, the Walkerville Hardware Company occupying 49 by 43 feet, with two storeys and a basement. The ground floor is used as the retail department and the third floor and basement for factory and mill supplies.

The sketch of the floor plan and the photographs give an idea of the general appearance of the building which is built of glazed brick and finished in quartered oak. The magnificent show windows are each 21 feet long.

On entering the store which is well lighted by both gas and electric light throughout, the general appearance and layout is at once apparent. Immediately in front of the entrance, a large 10-ft. and two 6-ft. silent salesmen filled with cutlery, silverware, ornamental clocks, etc., meet the eye. On the left is the shelf hardware case which has some 726 quartered-oak boxes and a saw display case. Instead of placing the different samples on the boxes, they have used the original idea of cutting the different articles out of the catalogues and pasting same on the face of the boxes making what they consider a very neat and tidy appearance.

On the right-hand side of the store, the shelves being neatly arranged with all kinds of household utensils so that it is an easy matter to see not only what they have in stock, but the article that the purchaser wants. Immediately opposite the entrance is the office and to the left of this again is an elevator going from the basement to the top storey. On the top flat is stored all kinds of factory and mill supplies, and with this firm, this constitutes the greater part of their business, owing to the fact that there are no less than nineteen factories in Walkerville.

Their stock at all times, is complete and up-to-date, and should anything out of the way be required that they do not have on hand, it is only a matter of a few hours when they can procure it, as with the many large establishments in Detroit, it is an easy matter for them to get whatever is asked for on the shortest notice possible.

This firm contracts for plumbing and steam heating in residences as well as in factories, keeping a competent staff of practical men.

The Walkerville Hardware Co. have been in business nearly six years and in that time, have built up a large jobbing factory and retail trade.

They cater especially to the factories. J. R. Coate is manager and A. D. Green secretary-treasurer of the company.

AT EDMONTON 26 YEARS.

Among the many flourishing and up-to-date hardware establishments now doing business in the City of Edmonton. Ross Bros., Limited, are rightly called the pioneer wholesale and retail hardware firm.

Established 26 years ago, when Edmonton was but a Hudson's Bay post, the business of this enterprising firm has grown up with the city until it now occupies the proud position of one of the leading wholesale and retail hardware stores in Western Canada. The faith which its founder, James Ross, placed in the future of Edmonton as a commercial centre of one of the richest districts in Canada has been fully justified and has brought its reward in the many thousand dollars worth of business which the firm now does every month in the year in this city and district.

Cutlery Silent Salesman and House Furnishings Department of Walkerville Store

Before the Rebellion.

Twenty-six years ago, in 1881, when the Hudson's Bay post was the only trading store of any great extent, James Ross, drifting into the great Northwest in search of a suitable place to locate, arrived in Edmonton after a long and trying journey through the unsettled prairies of the West. Having had considerable experience in the hardware business he opened a hardware store in a rough log building on what is now the corner of Jasper Avenue and Second Street. A little later he was joined by his brother, Fred Ross, and the business was extended. In addition to hardware, dry goods, boots and shoes, groceries and other necessities were handled by the firm and disposed of to the traders and trappers who came periodically into Edmonton to dispose of their furs and secure supplies. By being early on the ground, and by careful attention the business of the Ross Bros., then known as the Northern Trading Company, flourished. In those early days railroads were a thing of the future and all supplies had to be freighted overland for 800 miles from Winnipeg on execrable trails in Red River carts, or taken up the North Saskatchewan River from Lake Winnipeg in the Hudson's Bay steamer the "North West." Needless to say, hardware and other supplies cost considerable in those days for the expense of bringing them in was very great.

Retail Department and Staff of Ross Bros., Ltd., Edmonton.

In 1887 the store was moved to its present location on the corner of Jasper and Fraser Avenues, to a frame building which still forms a part of the present modern structure. Time wore on and the town of Edmonton grew slowly and steadily. After the rush to the Klondyke for gold Edmonton became better known, for it was here that many gold-seeking parties finally outfitted before leaving on their 1,400-mile trip to the Yukon Territory. During the time of this rush traders in Edmonton did a big business and prospered greatly, and among them the Northern Trading Company secured its share of the golden harvest that fell on all who remained in business in Edmonton instead of rushing off madly on a long and hazardous trip to the Yukon.

Stove Department of Ross Bros., Ltd., Edmonton.

Five years ago a joint stock company was formed under the name of Ross Bros., Limited, the new firm consisting of James Ross, Fred Ross, J. R. Hopper and J. C. Dowsett. All lines were then discontinued with the exception of hardware, and the firm devoted itself exclusively to this branch of the business.

Rebuilt in 1902.

The old store was remodelled and a large handsome brick block erected, which is the present quarters of the firm. The business of the company has advanced correspondingly with the rapid growth of the city during the past few years, until now it is one of the leading hardware stores in the West. With the formation of the joint stock company a wholesale branch was added to the business which has proved a decided success.

The retail hardware store of Ross Bros. is divided into two sections. On one side are kept stoves and their appurtenances as shown in the accompanying cut, while on the other side is kept all kinds of shelf hardware. The wholesale establishment is at the rear. A large number of clerks are employed in both departments and every year the business is growing larger.

Ross Bros. is a good illustration of the way a business will grow in the West if it has active and progressive men behind it, and the founders of this business may well feel proud of the success they have attained in their business.

30 YEARS AT GUELPH.

Undoubtedly the pioneer hardware store in the district surrounding Guelph is that started by the late J. M. Bond, and now known as the Bond Hardware Co., Limited, it being not only the pioneer store, but it is still the only wholesale one in the city.

J. M. Bond was, as a good many of Canada's leading merchants are, an Irishman. He was born in Queen's County, Ireland, in 1837, coming to Toronto in 1849, being educated in the Provincial Model School there. In 1852 he entered the employ of Rice Lewis & Son, Toronto, where he learned the hardware business till he had it at his finger ends. He came to Guelph in 1866, when Guelph had only a population of 6,000. Two years later he opened up a hardware store in the same spot that is now occupied by the Bond Hardware Co., on the corner of Cork and Wyndham Streets, the store then occupying about 60 feet by 25 feet.

The business which he started, due to his able management, became one of the largest in Western Ontario. The business became larger as time went by, and addition after addition had to be made in order to keep pace with the increased business, until now there are nearly a dozen different departments. They include the retail store proper, the wholesale department, an oil wareroom, a capacious iron and steel house, paint store rooms in the basement, as well as a large stock of horseshoes kept in the same place, large linoleum room, a large stock of carriage woodwork, granite and tinware, cutlery and silverware, and sporting goods departments. Across Cork Street is a two-storey stone warehouse, with outlying sheds. In the former there is kept the surplus stock, principally paint oils, and a large stock of cement. In the latter, a further stock of lamp oils and iron pipe is stored. Outside the city in an isolated spot, a large stock of gunpowder is kept.

The main building is a stone structure, four storeys high, almost one-fourth of a block in length. The first floor composes the retail store, the second storey the wholesale store, and the remaining two storeys and basement are kept for stock room purposes. The retail store is well lighted, both with natural and artificial means.

The Store Interior.

On entering the store a row of silent salesmen confronts the purchaser with nicely arranged displays of cutlery and silverware to tempt customers. The stock is arranged in boxes, with samples on the outside, so that the clerk can immediately see what he is looking for.

In 1905, Mr. Bond felt that the business was getting beyond his abilities, owing to the great increase, and, in his rapidly approaching old age, a joint stock company was formed, with Mr. Bond at its head. In 1906, while in Montreal, Mr. Bond was stricken and died, and a new arrangement was made. D. T. Symons, Toronto, was elected President; T. A. Keatinge, Vice-President and Managing Director; J. S. Millar, Secretary-Treasurer, and Mrs. J. M. Bond and Geo. Bond as Directors. Shortly afterwards, Geo. Bond dropped out of the business, and W. G. Howell, head clerk of the retail department, was admitted into the firm. This constitutes the present firm. The staff consists of twenty-five employes, including the office staff.

The firm believe in newspaper publicity, advertising in both daily papers, and in a good many of the country papers, etc., and they ascribe a good deal of the firm's success to this. Their mottoes, "The Big Hardware Store," and "Our Prices Are Always Right," are household words in this vicinity. Their wholesale trade is spread over all the country intervening between Guelph and Collingwood, and Guelph and Goderich, they keeping two travelers on the road.

Bond Hardware Co.'s (Guelph) Display of Cutlery, Silverware and Cut Glass.

Always have a good word for the "old man" and his store. He pays you what you are worth to him. If you don't like your work or the place, get out. You will be injured as much as the boss.

Salesmen and Salesmanship

An Interesting Discussion at the Clerks' Club—Helpful Pointers for Salesm en on the Road and Behind the Counter—Relationship of the Clerk to His Employer.

The Oldtown Clerks' Club

A Good Story Told by a Hardware Clerk in the Belknap Magazine.

Nowadays it is rather an indifferent sort of person who does not belong to at least one club, and so nobody was surprised when the young men who stood behind the counters of the local merchants in Oldtown organized a clerk's club.

They elected all the different kinds of officers they could think of in order to every member might be an officer, and adopted a constitution nearly as long as the United States, and so many by-laws that somebody was pretty sure to break one every day. With this most excellent foundation to build upon, they persuaded the druggist to let them use a large room over his store as their club room, and furnished it with such articles as they could pick up here and there—chiefly "borrowed" from their various homes when the old folks were out.

The Clerks' Club in Session.

Here they met and still meet of an evening, reading, playing checkers, swapping experiences and otherwise enjoying themselves after the manner of young men when their day's work is done.

One evening the grocery clerk told a story which he said was a true one, and this is the way the story ran: "One day," he said, "a lady in the little town where I came from went to the general store—the only store in the village—and asked the proprietor if he had any mourning stationery. "No, mum," he replied, beaming cordially upon his customer, "but I've got in some of the finest codfish you ever saw and I'd like to show 'em to you."

After everybody had laughed at the incongruity of the yarn and expressed the usual doubts as to its truthfulness, the hardware clerk remarked that the story might be a little far-fetched, but it did not sound so strange to him. "In fact," he declared, "I've seen my boss sell a kitchen range to a woman who came in to buy a pair of scissors. It was a very interesting thing to me and I want to tell you all about it.

"This lady came in and asked to see some scissors. After the boss sold her the scissors she made some remark about the hot weather and said she felt particularly warm because she had been cooking over a hot stove all morning. 'Anybody who cooks over an ordinary hot cooking stove in these times deserves to be uncomfortable,' said the boss. 'Why'! exclaimed the lady, 'how can you cook without suffering from the heat in such weather as this?' 'No kind of heating apparatus can alter such weather,' replied the boss with a laugh, 'but I'm talking about those awful blasts of heat that radiate from the top and sides of the cooking stove and nearly knock you down when you open the over door. If you have a minute to spare,' he went on, 'I would like to show you something.'

"He took her into the back room and showed her a steel range. He explained to her the difference between iron and steel, and demonstrated by the use of a match, how long it takes to get heat through a thick piece of iron, such as a cooking stove is made of, as compared with the quickness with which heat strikes through the thin parts of a steel range. Then he explained to her that it took but little fire to heat a range sufficiently to cook with, whereas, in a cooking stove it took so long to heat the thing up that as a natural consequence it became a regular fiery furnace, making the room insufferable and uselessly holding the heat for hours.

"He showed her all the modern improvements and conveniences of the range—the thermometer on the door which showed the temperature of the oven to the women who, might be sitting across the room; explained to her the way the heat passed around the oven, and how the asbestos lining kept the heat inside where it belonged. He pointed out the sanitary advantages and fuel-saving qualities. He described the solid one piece oven; he showed her how easy it was to take care of it and how handy it was to use.

"In a little while his coat was off, his sleeves were rolled up, his hands were black and his hair mussed up, but the woman was interested. Little by

little he dissected the range—fairly took it to pieces—and in the end the woman was so enthusiastic that she ordered the range at once, and wondered how it was that she had got along so many years with an old-fashioned contrivance such as she had been using.

"That shows how a hardware salesman can sell goods—how he can interest people in things they had no idea of buying when they came in—and to my mind it is the goods sold in that way that make a man win out in the store-keeping business."

"That's all right," said the grocery clerk, with a yawn, "but if you were in my line you would get pretty tired of that sort of thing. Every time a woman comes in to buy some potatoes, I have to ask her whether she wants green corn, or string beans, or prunes, or lettuce, or half a dozen other things that we are particularly anxious to get rid of, and then follow her out to the door and try and induce her to take a few cantaloupes or a watermelon. In the grocery business we have to do that

"In the end the woman was so enthusiastic that she ordered the Range at once."

because things spoil, but if I was in the hardware line I do not think I'd bother my head much. An axe or a shovel is not going to rot or go out of style—it is always salable."

"I think that's a rather narrow way to look at it," replied the hardware clerk. "Any young man who hopes to sometime have a store of his own must learn to sell goods, and the only way he can learn is to try and sell goods. If he tries, and tries hard and keeps on trying his sales will increase week by week and month by month. He will learn new ways in which to interest people; he will learn to talk up strong points of goods; he will make acquaintances and friends who will like him for his earnestness and his evident desire to please; he will make such a strong impression on his employer that he will be considered a valuable man and will be paid accordingly.

"When he reaches a point where he can go into business for himself, he has learned all about the goods and all about the ways in which to sell them. He has studied human nature and knows how to approach people in the right way, and when he starts his own business, his trade will naturally follow him, for the people have learned to like him and trust him.

"Anyway, that's the way the thing appears to me and it's the theory that I'm trying to work out in my own case."

It was unanimously decided with no dissent, even from the grocery clerk, that although the hardware clerk had talked an unreasonably long time, he had said some sensible things.

Spoiling a Probable Customer

(The Hardware Dealers' Magazine.)

Chapter I.

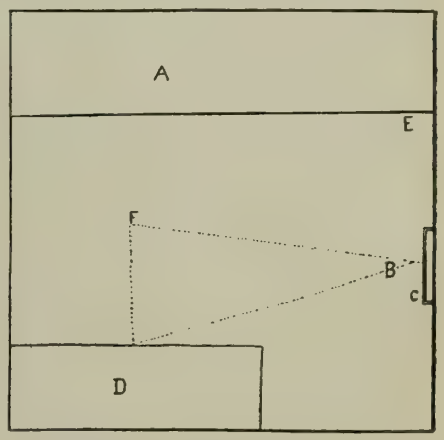
There was a concern that desired to place its article in every home in the country. The managers went out after business intelligently. They did not expect to supply all of the rather large class above described, but they hoped to reach enough of them to make their business pay. As an aid to this they judiciously took a page in a journal of large circulation, and displayed an advertisement artistic enough to make the mouth water of any man who desired improvement in his domestic service.

A man who found himself in this class cut the advertisement from the periodical and studied it long and carefully. The article described seemed to fill the bill as he needed it filled, and the description was fair and honest on the face of it.

"I believe,' he said to himself first, and to his wife afterwards, "that I have found the very thing for which we have been in search."

She took the leaflet and gave it that searching investigation that a woman gives to any thing that relates to domestic economy; especially when the husband discovers it, and it behooves her to make certain that there are no flaws.

This preliminary explanation is for the purpose of showing that it was an ideal situation for the salesman against whom this man should run up.



The customer was already half persuaded, and very anxious to have some one persuade him the rest of the way.

Chapter II.

In the early forenoon of the day following he hastened through with his mail and made a bee-line for the place where the article was on sale. "I will look them over," he said to himself, "and if they are correct in all ways I shall need twenty-seven of their articles for my house." He calculated that it would prove to be a pretty good order, and that the concern would be only too glad to do business with him. (If it was it carefully concealed the fact at the critical moment.)

He entered the place of business. He shut the door behind him, and prepared to be as genial as he could when some eager salesman came forward to grapple with him.

He was not overwhelmed with a welcome. A man was wrapping up goods

A, Salesman.
B, Customer.
C, Door.
D, Goods advertised.
E, Railing.
F, Customer's second stop.

in a corner; an office boy was searching in a waste basket; a stenographer was pounding on the keys of a typewriter; a man who was evidently the salesman or the manager-salesman hyphenated, was making an entry in a book. He completed a couple of lines, and then arose and stood in the place marked A in the accompanying diagram. He stood stock still on that letter A during the brief interview. The customer walked to the point B, and halted for a moment.

"Well?" said the salesman.

"I was interested in this article," said he, as he pulled the page from his pocket. There was a moment's pause.

"Yes?" said the salesman.

"I thought I would take a look at them," continued the would-be purchaser, feeling much smaller than when he entered. "I suppose this is the place

to look for them?" The question was needless, but he used it as an ice-breaker.

"I guess it is," said the salesman. "This is the place where we keep them." But he did not open the gate, or come from his enclosure from behind the railing.

"I thought I would like to look at them."

"There's a lot over there." The salesman pointed to a platform full of the goods, and turned to answer a question from his stenographer. The office boy finished with his basket, and set it in a corner. The man who was packing goods kept on with his work.

The customer walked along the line dotted in the diagram until he came to the goods marked D. He stood and examined them. They seemed to carry out the description given in print; to be what he wanted, and not beyond his means. But not being an expert, he did wish that someone was there to describe them to him. He did not feel like asking for this service under the circumstances. The office boy passed him with a kindly look but the salesman, or manager-salesman, stood rooted to the letter A.

After a moment of self-communion the would-be customer turned on his tracks and followed the dotted line toward the railing. Then he halted for the third time, and this conversation ensued:

Customer. "I have been looking for something of this sort for some time. I have quite a large house that I want to fit out."

Salesman: "I guess they would do about what you want done if you put them in."

Customer: "Yes. Do you retail them?"

Salesman: "We do."

Customer: "Do you put them up?"

Salesman: "No."

Customer (who was getting a little warm in the collar): "Then they would be of little use to me. I cannot put them in myself." (Turns toward the door, inclined to get out and seek a less frigid atmosphere.)

Salesman: "We could give you the name of a concern that would deliver them and install them for you. What is your name?"

It was given; the customer had halted with his hand on the door knob.

Salesman: "Wait a moment."

He turned to a book, wrote an address on a slip, called the office boy, and told him to hand it to the man. He did so, and the wouldn't-be-customer put it in his pocket and walked out. Once outside he crumpled the address and the advertisement into a wad, and threw them into the street.

Chapter III.

The man has his fixtures in, but they are listed under a different patent from those he first looked at. They may not be any better than the other, but he feels good when he thinks of the treatment he received from the second place at which he applied.

Was there any excuse for the salesman who thus lost a good order, and spoiled a trade? How many mistakes did he make? Count them.

1. He failed to come out and welcome a possible purchaser when he entered.

2. He did not take the caller over to the goods, show them up, and arouse an interest in them.

3. His replies to questions gave the impression that he did not care whether he made a sale or not.

4. He did not offer to sell the goods, and arrange with his local agent to put them in.

5. Nor did he even secure the man's street number and offer to send the agent to him with samples.

6. He did not try to put his caller in connection with the agent in any way.

7. He knocked the house out of all future business with this man or his friends or neighbors.

8. He was not fair with the journal in which the advertisement appeared. It sent him a good customer, and he turned that customer down.

Salesmanship is Developing Orders

Edwin O. Grover Points Out the Difference Between Barter and Salesmanship.

Salesmanship is not barter. To walk up to a man with money in his pocket who wants a carload of Ivory Soap and say to him: "Here is the soap. Give me your money," is not salesmanship.

You simply took advantage of the man's necessity—he had to have Ivory Soap, and you bartered the soap for what we call money. This was the primitive method of the American Indian and the head hunters of Borneo.

I saw a traveling man the other day who was still engaged in this simple game of barter. His firm after years of labor and at great expense had built up a large business for a trade-marked article. The "Salesman" was going about taking orders.

One of two things should be done, either the house should put a man on the road who sould not only "take orders" but who could do defensive work when necessary to "keep orders," or better yet "develop orders"—for no house has so much that it cannot have more—and does not want more.

Either the house should do this or call the man home and set him to nailing boxes, while it spent his salary and road money in "taking" orders direct—in educating the buyer to anticipate his own needs and teaching him to lick a postage stamp.

What is Salesmanship?

But, if salesmanship is not barter, what is it? As I see it, salesmanship is the convincing of another, first of his own need of what you have to sell, second, of the merit of your goods, third, of the wisdom of his giving you his order—right now.

Some traveling men accomplish only the first—they convince the grocer that he needs a fresh supply of canned goods, for instance, but they don't know their own line well enough to convince him of its merits—not that it is better than any other necessarily, but that it gives value received. This salesman is in the "primer class." He ought to be brought in and educated as to what he is trying to sell.

Then there is the salesman who opens up the market—who shows the customer his needs—who convinces him of the merit of his own line—when the order is placed he'll get it—oh, yes—but there is no need for placing it to-day—none whatever. The salesman enters up a "prospect," and another house gets the order and it's always a "rush order" because the first salesman let his customer delay until his stock was too low.

The complete salesman is the man who convinces of need—then of merit—and finally of the necessity of ordering at once. But salesmanship is larger than a definition. In a broad sense a salesman cannot sell goods successfully without selling a part of himself—and a part of the firm he is working for.

A Concrete Example.

Here are two men traveling for the same house. Jones "gets business." So does Johnson—no more or no less. But Jones is the better salesman, because he sells a part of himself with every order, with a little of his firm

thrown in for full measure. He "gets business"—but he has something to give in exchange besides the shipment called for in the order book. He gives the most courteous treatment, the most thoughtful attention, the most friendly interest of which he is capable. He makes the customer feel that he is going to personally secure for him exactly what he wants, when he wants it, and in the form he wants it. He makes his customer feel as if he were in the company's store and he were waiting upon him. He leads the customer to ask questions about his goods and his firm and takes pride in figuratively "showing him through the store." He leaves the customer with confidence in his word and pleasure as from a friendly caller.

Then as part of all this he inspires in the buyer absolute faith in the honesty and integrity of the firm he is working for. He convinces him that his order is appreciated and is going to be filled promptly and accurately. He makes him feel that he is buying goods of men and not of a machine; that while the business is systematized, there are men—big, human beings—behind the system. It is thus that Jones sells a part of himself with every order. It is thus that he sells a little of the good-will, the interest, the personality of his firm with every shipment of goods.

Jones is a "business builder."

Johnson is a "business getter."

Salesmanship of the highest order implies "building" as well as "getting" knowledge; prove that you respect and esteem the man above the profit on his dollars and you will make a customer of perennial profit and not a lonesome sale.

QUALIFICATIONS OF A BUYER.

No clerk can or should be, satisfied with himself until he has developed ability to buy goods, as well as sell them. The latter requires greater discrimination and better judgment than the former, and it is a qualification which must be acquired. Buyers—good buyers—are not like poets; they are made. There are hundreds of successful salesmen to one successful buyer, and a clerk who wishes to make himself the most useful, and, so far as possible, indispensable, to his employer, will early in his business career begin to develop the qualities which combine to give him the ability to buy goods.

Of course, the first requisite is a knowledge of the goods; it goes without saying that one not possessed of a thorough knowledge of the materials he is supposed to buy economically cannot be a success.

Supplementing his technical knowledge of goods, he must know the trade he is buying for, and this is probably the point at which the greatest number of failures are recorded. Goods which if bought for one store would be easily disposed of at a profit, might be totally unsuited to the trade in another store in the same block. A buyer must study the trade; must know the ability of the patrons of his store, to absorb the class of goods he is buying. Without this knowledge he will be a complete failure as a buyer.

THE DRUMMER SET 'EM UP.

Last week a group of commercial travelers were lounging around the office counter of an hotel in London The Less, discussing local option with the proprietor. One of them who had just come in from doing a local option town aired his grievances vehemently, and concluded by saying:

"It ins't fair. A farmer comes into a city and gets a meal in a first-class hotel for a quarter. I go out to the country, have to eat in a second-class joint and they soak me forty cents."

"Well," rejoined the proprietor, "It's worth fifteen cents extra to feed a drummer, compared with a farmer. You drummers come into a dining-room as though you owned the house. You want a clean place, you want a clean knife, clean fork and a clean napkin. You order everything on the bill-of-fare, you grumble about the quality of the food, joke about the butter, jolly the waitresses and sit around the table for half an hour. And when you go out you put a dozen tooth picks in your pocket.

"Now a farmer comes in looking meek and humble, is willing to sit anywhere, says ma'am to the waitresses, will eat quietly whatever is set before him, and often doesn't even unfold the napkin. He only takes one order in each course, he minds his own business, never starts an argument, hurries through his meal and is done in ten minutes. And if he should happen to use a tooth pick he puts it back."

"It's on me, boys," said the drummer. And he stood.

Developing a clerk into a careful buyer is always a difficult problem. Any clerk can buy after a fashion, but to buy as he would if his own money were going into the goods is another question.

No matter how good a clerk may be, how well he looks after things on the sales end of the business, he needs constant advice in his buying efforts.

In fact, there are very few stores where the proprietor himself can get away from the work of overseeing the buying. Tying up money in merchandise is a serious matter, and the clerk who is ambitious to become a successful buyer will find that it will require careful study and the exercise of discriminating judgment before he will have mastered this, the most difficult of all the problems in connection with retailing.

METHODS OF REWARDING CLERKS

A very ingenuous method of stimulating sales in departments where sales are mostly for small amounts is in use in one of Toronto's departmental stores. The selling force, which consists chiefly of young girls, have to fill two check books each day. After the two first books are used, 5c is paid them for each check they make in a day, no matter what the amount of the sale is.

The most modern, most progressive idea, and the one most favored at present, is to pay a bonus or percentage upon the amount of profit earned, instead of an individual percentage on sales. This makes the percentage depend not simply upon the amount of sales, but also upon the profits earned. In working out it makes for unity, instead of division, and encourages each salesman to work for the good of the department. The selling staff, to earn a large bonus, must strive to sell to the best advantage and must make strong efforts in every way to keep up the efficiency of the department. The usual way is to pay the bonus on the profits of each department. Often, also the amount paid is graded; thus the head of the department will receive, say 3 per cent.; his asistant 2 per cent., and the rest 1 per cent.

It is the usual custom to furnish the head of each department each week with the takings of the corresponding week of the year previous, so that each department knows just how it stands, and whether it is making progress or retrograding. In each and every case a fixed salary is paid in addition to any bonus or percentage.

Keep a Clean Character

"Eli" in the Hardware Trade.

In a big city department store a card sign which is usually in evidence in one department or another tells a story which I think many young men who read this column can well take to themselves. Don't you think for a moment that I am a preacher or that I ever aspired to be one. I taught a country school once and that was enough for me. But just the same, I think that the things we see in every day life furnish timber for many a good sermon.

This card sign I was telling you about reads:

Slightly Soiled

Marked Down

In my experience while traveling through this vale of tears I have met many young men who were much different at twenty-two or twenty-five years than they were at sixteen or seventeen. I have seen young fellows who, when they left their homes and started out in the world were as clean boys in mind and act as any the world ever produced; and yet when some of those boys had reached the age of twenty-two or twenty-five, time and evil communications had worked enough change to put them in the "slightly soiled" class. Of course the clean minded people of that community would put the character of these young fellows on the bargain counter under the 'marked down" sign. It does not require much soiling to force a piece of merchandize on the "marked down" counter. It is the same wth the young man.

* * *

You and I have met many of these young fellows who were started in life right. They did not smoke, drink, or swear and their morals were good. That was before their contact with the world. How disappointing it was to meet that young man a little farther down the highway of life and find that he had been "slightly soiled."

Perhaps he was drinking a little. Perhaps he was chewing tobacco. Maybe he was indulging in what you call, "coffin nails"—cigarettes. Perhaps he got a little confidential and told you a questionable story. You did not have to look far to trace this to certain associations. In your mind you marked him down at once. There are few young men who can enter the world's stock of men and go through to the end in the high-grade class. Most of them are soiled in one way or another, some more, some less. A great many are "slightly soiled," and although they are "marked down" for a time, they manage to get out of that class later in life and get back somewhere near the purity which characterized them at the start. In others the soil-stains sink in so deep that they never recover and the community marks them down a long ways.

* * *

There are many poor judges of men, just as there are poor judges of merchandise. Many are ever ready to place a high value on a sham article. Some people think that stains in men as well as in merchandise can be overlooked. This is why some mammas are ready to pay a high price for soiled specimens of men when it comes to marrying their daughters off. But these are exceptions. The good old general rule holds in the majority of instances. When a young man finds that he is even "slightly soiled," he usually marks himself down in his own estimation. He is quite sure to be "marked down" by most healthy-minded people who know him. They may regret the loss in value, but they must recognize the loss just the same.

To all of my readers among young men I want to say: Be careful what you think. Don't soil your minds with thoughts that would disgrace you were they to become words. Throttle those thoughts early. Choke them off. Be as careful with your acts and your words as with your thoughts. Even with your best efforts you will have hard enough work to keep out of the slightly soiled, marked-down class.

OBSERVATIONS OF A CLERK.

I am not a boss yet, and I do not do any buying, but from my place behind the counter I am greatly interested in watching the travelers as they come and go. A very successful traveler once said: "Always shake hands with the delivery boy, he may some day own the store." That is true enough, and most of the travelers seem to act on that rule.

Of course, some travelers totally ignore the man behind the counter, thinking it wise, but they make a serious mistake, as the men behind the counter have more influence on the boss than the traveler ever imagines. I know our boss often asks our opinion on goods he intends buying. Then, there is the chap who is too fresh. He makes so much talk and laughter that the boss feels annoyed and cuts him.

One traveler I know wasted so much of the book-keeper's time talking to her that the boss told him he didn't like his firm, didn't like him, and didn't want him in the store at all. It may go all right in the city, but I know our boss doesn't like to be talked to at the other end of a smoking cigar. Some fellows come in, make a sale, and then talk so long after that the boss wishes he hadn't given him the order.

It seems to me that the man who comes in quietly, shakes hands smoothly with the boss, just as smoothly gets the boss's order just as smoothly smiles himself away, is the man who deserves the orders.

CLERK AND HIS EMPLOYER.

Upon proper and mutually satisfactory relations between the clerk and his employer depends very largely the success of any store. It can be seen, therefore, that to this question too much consideration cannot be given. Unfortunately, but a small portion of clerks appreciate their responsibility in contributing to the success of the particular establishments with which they are identified, and are satisfied to render a purely prefunctory service, taking little practical interest in the general welfare of the store, the result, of course, being that such a clerk does not do his best work—no clerk can who does not interest himself beyond the actual performance of assigned duties. Little consideration is required to convince one of the fact that from the stand point of the clerk himself, such a course is a suicidal one, so far as his hopes of a successful business career are concerned.

A clerk who is as solicitous of the welfare, and progress and good name of the store in which he is engaged has taken a long step towards making himself indispensable to his employers.

This interest will manifest itself in various ways. In the first place, there will always be an unswerving loyalty to "the firm." Your particular store is the most reliable, most progressive, and in every way the best that you know of. There will be no complaints to your young friends during the evenings of the "unfair" treatment of the "old man." Generally, you will find that he is as good to you as you deserve, and as good as the average employer.

The ability to make friends of the store's customers is one of the most valuable assets a younk clerk can pos-

sess. You've noticed, of course, how in some stores customers will wait for a certain clerk to serve them, and generally, it will be found that this particular clerk has attained his popularity by his willingness to go out of his way to satisfy the customers. This is a faculty doubly valuable to its fortunate possessor—it increases his value to his employer, and builds up for himself a reputation, which, should he embark in business for himself, will constitute a quality easily convertible into business success.

Employer's Attitude to Clerks.

On the other side of the relationship—the attitude of the employer to his clerk—there are many things a clerk might say. In the first place, give him credit for doing his best—unless you're satisfied he is not—and encourage him to take an interest in your business. Ask him to give his opinion in respect to certan new methods you have in contemplation, and encourage him to make suggestions as to means by which the store may be improved, and the customers better served. He is, perhaps, in a better position to hear the adverse criticism made on your store than you are, because your friend is naturally disinclined to tell you about the unfavorable comparison he heard made the other day between your store and another. Your clerk likely heard it too, and if he is encouraged he will tell you of it, and possibly be ready with a suggestion as to means by which the desired improvements could be effected.

Make him feel that it's his store, as well as yours—that he is co-responsible with you for its success. A little commendation and an assurance that his work is appreciated will act as an incentive to him, and more consistent work will result.

In a word, arouse an enthusiasm in your clerk, and if he is the right kind he will respond with the best there is in him, and if he's not the right kind, and does not give the service you have reason to expect, your only resource is to replace him with one who gives evidence of his possession of the necessary initiative and other qualities calculated to encompass his success and your satisfaction.

TRAVELERS AND PERSISTENCY.

A traveler should never give up calling on a probable customer because he at first refuses to even look at his samples or talk business with him," said the head of a well-known manufacturing firm of Montreal the other day. "Here, for example, is one of my experiences: When I was on the road in the early stages of my business there was Blank & Company, whom you know well, who refused when I first called upon them to talk business with me in any way. Nothing daunted, every time I visited their city I would drop in, shake hands with the buyer, pass the time of day and walk out again, never once mentioning business for some time. One day I met the buyer of the firm at some athletic games. I came away from the field with him and as we were walking along the street he remarked, 'By the way, we have never bought anything from you people.'

"'No,' I said, 'but we are living in hopes of finally doing something with you.'

"'Call around to-morrow morning,' said he, 'possibly we can do something.'

"I called the next morning and fortunately struck the psychological moment. He examined my samples, and gave me a small order. It was not much but was better than nothing. What has been the result? To-day we are selling that firm $10,000 worth of goods every year. I could give you other experiences but I think that is sufficient.

Rules Which Ensure Success

By B. A. Chambeau.

Don't allow idlers to loll around the store.

Don't hesitate if desired to change a purchase for a customer.

Don't leave your counter until the customer leaves the store.

Don't be afraid to thank a customer who recommends your goods to some one else.

Don't forget to ask the friend who comes in to chat to do it in the back room.

Don't neglect an opportunity to make a friend of a customer. Confidence begets patronage.

Don't expect the clerk to take more interest in the business than you do yourself.

Don't deride the clerk before customers.

Don't expect a clerk to know a thing because it is simple to you. It may have been different in his last place.

Don't forget that a good clerk never makes the same mistake twice, while an indifferent one does.

Don't forget that there is no need of your telling of your ability. If you possess any those interested will find it out. This applies only to clerks; with the proprietor it is the other way around.

Don't forget that the clerk who accomplishes most is the one who makes least fuss about it.

Don't forget that the "forget to charge" habit is quite prevalent among many store inhabitants. A cash register system properly conducted, eliminates it.

Don't forget that the man who sits down the minute that the boss goes out is very often seen standing around waiting for a job.

Don't forget the fellow that has to be told what to do, when to do it, and how, is usually the fellow who thinks he knows it all.

Don't forget that the employer or clerk who reads his trade journals is usually the best posted business man in the shop.

Take as much interest in your employer's business as if it were your own.

Do not try to get all you can, giving nothing. Do more work than is demanded.

You can't be a half-hour late every morning and make your employer believe that you have his interests at heart.

Do your work well to-day and you won't have to do it over again to-morrow.

A sullen countenance is not pleasant to look upon for either an employer or a customer. Thrusting your own disgruntlement on those around you is a poor investment.

Give good value for the money you receive and you will be sure to succeed.

The road to success is none the less worth traveling on because it is not short or easy.

Always set a good example. Do not lie to the clerk or to the customer and expect the clerk to tell you the truth.

Have confidence in your employes until they prove themselves unworthy; but keep temptation out of their way, keep your eyes open, and remember when contemplating chastising, that a swift and sudden jolt is worth a hundred taps.

Respect your clerk, and treat him accordingly, or don't keep him.

Encouragement often does more good than finding fault. Reprimand only justly. When it comes time to reprimand the same man the second time for the same mistake—just fire him.

Advertising Value of Window Displays

Dealer Cannot Afford to Let His Show Windows Lie Idle—Displays of Holiday Goods Made by Canadian Hardware Stores—Some Practical Suggestions for Displays in the Different Seasons.

How Windows Should Be Built

Frederick Pfaff Discusses the Subject in an Intelligent Manner.

I do not believe any wide-awake business man can afford to let his show windows lie idle. All the other classes of advertising have their value, but the class that brings the whole matter right up to the prospective buyer is the window display. I would not for one moment be understood as advocating the policy of dropping all other modes of advertising and relying solely upon window display, but desire to impress the value of window display as an auxiliary to their general scheme of advertising. Many merchants do not give this method of advertising the amount of attention it should receive and do not seem to realize its full value. Many think it is unnecessary trouble and somewhat expensive. I believe that the window display is one of the most valuable methods of advertising, and, as a rule, that the appearance of a merchant's show windows is an index to his business ability. Many will tell you that it is an easy matter to dress up a window in a dry goods store, but it is a difficult matter in a hardware store. I realize that at times it requires a great deal of ingenuity to get a really attractive window, but in this, as in many other things, "practice makes perfect."

I believe it is a good idea to select one person in a store to look after the dressing of the windows. If everyone has a finger in the pie it will certainly be spoiled. If it is left to one person he will soon begin to take a pride in the matter and the windows he turns out will be trade getters.

Do not expect immediate results from every window you fix up, for if you do you are sure to meet with disappointment. Many a time you will get up a window which is very attractive, but right at the time you cannot see that it is bringing you any trade, but some time afterward a customer will come in and ask for one of those hatchets you had in your window some time ago, or a set of those sad irons you had in your window last fall. I sold twenty-five or thirty sets of sad irons in one week as a result of a window display some weeks before. I made as attractive a showing of them as I could and did not get any direct result, but it came in time.

The chief value of the window display lies in the fact that it brings the prospective buyer face to face with the article to be sold and usually leaves a lasting impression with him.

Windows Not Properly Built.

One fault with many in preparing window displays is that they do not have their windows properly built. They are either too small or simply have a small platform built in them, and they are not boxed up, and, as a result, you cannot properly show your goods. For ordinary hardware display a show window should be about eight feet by eight feet, floor measurement. The floor in the window should be elevated to the bottom of the glass. The window should be boxed up all around, so as to be as nearly dust and fly-proof as possible. The ceiling should be about seven feet from the floor of the window. A door should be placed in the back large enough to admit the largest article which you will have occasion to place in the window. Of course, in some stores it is impossible to arrange such a window without a great deal of inconvenience. In such cases, do the best you possibly can.

After constructing your window it is necessary that you arrange your display in a manner that will attract the attention of the passersby and cause them to stop and take notice. When you accomplish this you have begun to make your work felt, but it is still possible that after arranging your window so as to attract attention, the arrangement is not of such a nature as to be a trade getter. It may be that display is so confused that the observer cannot be converted to your cause by it. Quite often you will see windows in which the trimmer has tried to make a display of what seems to be all the articles carried in stock. As a rule, this class of windows do not pay.

Display Only One Line.

To make the display most effective you should only show one line of goods at a time. If you desire to make a cutlery display do not sandwich it in with a display of builders' hardware. If you want to make a display of builders' hardware don't mix it up with a display of harness, or if you wish to make a display of ice cream freezers do not mix them with the display of a range. Take one article or a number of articles belonging to the same class and make the display such that after looking at it the prospective buyer will have that article or class of articles well impressed upon his mind. Otherwise the prospective buyer will only take a casual look at the different articles and walk away without having received a strong impression of any of them.

A window display can be greatly strengthened by the use of show cards. These should be neat and call attention to the display in a brief and clear manner, and it is well to have a neat price card showing the price of each article. A great deal of care should be taken in the preparation of these show cards and above all things they should be neat. A hand-painted card is much preferred to cards printed with a rubber stamp on a piece of old card secured by tearing up a pasteboard box. The latter has a tendency to cheapen your window and destroy its artistic effect. Good cardboard can be secured at any printing office at a very reasonable price. By a little practice any window trimmer can learn to make a very respectable style of letters and figures and this tends to give a touch of originality to the appearance of your window. If you contemplate making a display of some special line of goods you can usually secure a selection of very strong display cards from the manufacturer or jobber for the asking.

Change your displays often. This is very important. If you leave a display too long people will lose interest in your windows, and, as a result, you will lose the advertising value of your displays. If you do not already make use of your show windows as advertising mediums, try them when you return home, and I believe you will soon come to the conclusion that hardware window dressing pays.

AUTO DISPLAY AT GODERICH.

Robert Craigie, with C. C. Lee, Goderich, has a reputation for original displays, but it is doubtful if any of his work has excelled the automobile display shown in the accompanying engraving.

The body of the auto is a bath tub,

the wheels, stove pipes; elbows with tea kettle cover form the centre of axle, with child's trays for mud guards and bread pans for doors. The front is composed of a stove board, coal hods and register faces, while the steps are granite soap dishes. The steering wheel is a round register with a piece of iron pipe supporting it. The levers are fence clampers, the seats are registers, with stove pipe and elbows forming the back. The top is a light frame supported by fine hair wire and worked in with tissue paper. At a glance many took it for a real auto until they stopped and looked at it.

Suggestions Made by Manitoba Trimmer

Walter S. Bate Gives Some Practical P ointers, But Argues Against Pricing Goods in Win dow Displays.

That Canadian hardware merchants, in the cities and smaller towns, have of later years come to realize the immense value of their windows as a selling agency is apparent in the increasing interest being taken by them in this department of the store. It is a problem to many to know what course to follow so as to obtain the best results, so a few brief suggestions along this line may be profitable to some.

Automobile Window Arranged by R. W. Craigie, for Chas. C. Lee, Goderich.

Window displays may be divided into two classes, stock and novelty. Both classes can be used to advantage, but, of the two, a clean, well-arranged display of seasonable goods, is, in the opinion of the writer, the more powerful trade drawer. Nevertheless, the novelty display cannot well be overlooked, as it is a very potent factor at special seasons, and often attracts the attention of those who would not be interested in a stock display.

At different seasons of the year, the greater demand of certain classes of goods, necessitates these being brought more particularly to the notice of possible buyers, in order to obtain a heavier sale.

The beginning of building operations in the spring affords a great opportunity to the hardwareman, and a window neatly trimmed with tools and other supplies needed by the mechanic or contractor, may be the means of attracting a customer to the store, who, if treated in a businesslike manner, may be so favorably impressed as to become a regular customer, and, perhaps, prove to

WALTER BATE, BRANDON, MAN.,
Clerk with Johnson & Co., and Winner of First Prize in our Recent Holiday Window Competition.

ROY GILMOUR, ALMONTE, ONT.,
Clerk with Torrance & Kaufman, and one of the Prize Winners in our Recent Holiday Window Competition.

be a heavy buyer of building materials throughout the season.

The advent of the summer-games season also presents a number of opportunities for catchy window displays of baseball and summer sporting goods, resulting in profitable business.

The fall season, too, is an opportune time for window advertising, beginning with the sporting goods (an excellent chance for novelty displays) and following with staple goods, such as heating and cooking stoves and any other lines which people will be looking for with the approach of cold weather.

The holiday season, the last of the year, gives rise to a great opportunity for effective trims. This is a season which particularly calls for attractive displays, as people are looking for gifts which will please their friends, and, if you can succeed in arranging an exhibit that draws the attention of those passing along the street, you have done a great deal toward selling the articles. Such lines as cutlery, silverware, cut glass, etc., are most in demand and can be displayed to advantage, without incurring a great deal of expense.

Argues Against Price Tickets.

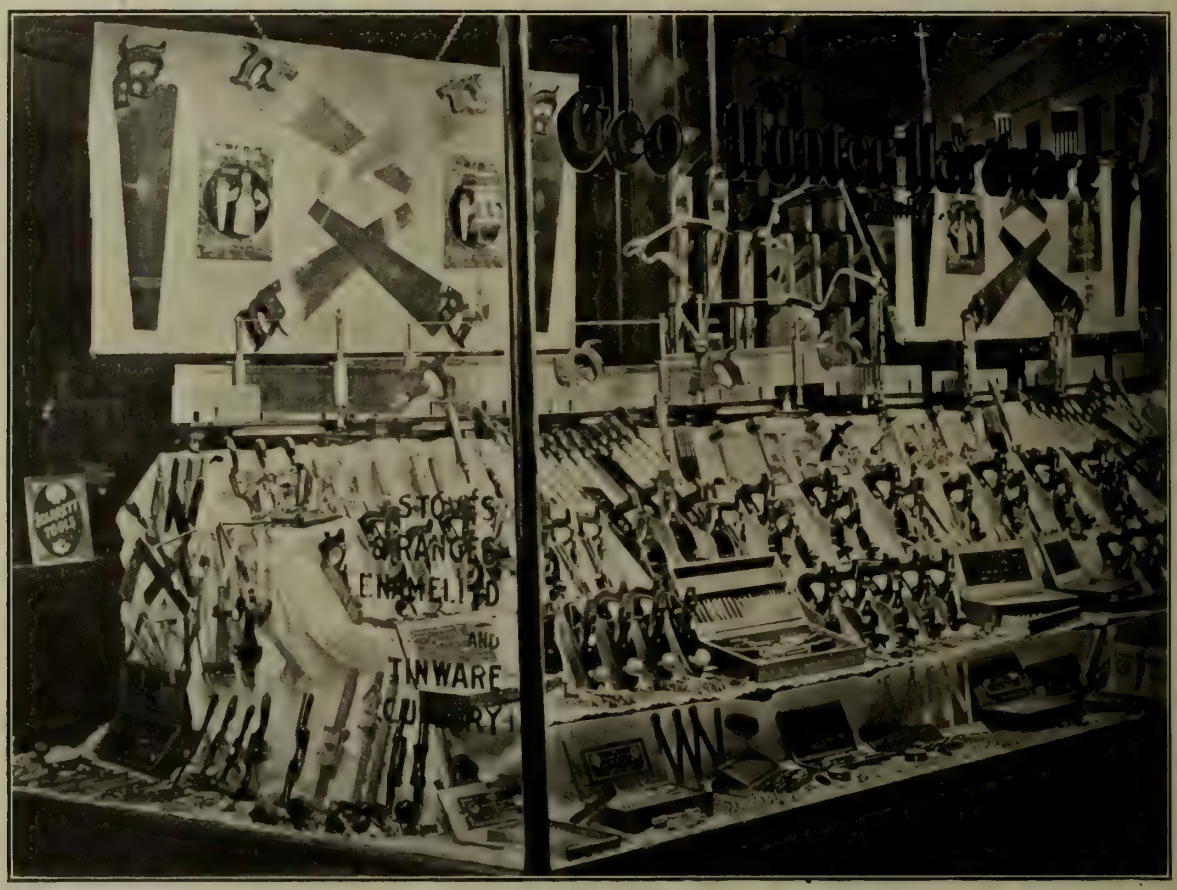
Some window dressers advocate the price ticketing of goods in the display, but the writer does not follow this custom, as it often happens that people, not seeing the price, will come into the store to inquire, and this gives the salesman his opportunity to prove his abilities in respect to other lines as well.

Expense in Making Displays.

Of course, there is the matter of expense to be considered in connection with window-dressing. The item of light is probably the heaviest as it is at night that a display can be seen to the best advantage.

The expense incurred for cheesecloth or other draping materials, fixtures, etc., should not exceed, on the average, more than two or three dollars per window. All fixtures should be carefully preserved, as, with slight alteration, they can be used in several displays. Not many set rules could be made for the guidance of the window dresser, and certainly none in the matter of the changing of displays. This is entirely optional with the trimmer, and as he should be acquainted with the general tone of the locality, ought to know the most suitable time for change. But, it is not advisable to leave any display until it begins to look soiled.

To produce the best results, a window display should be backed up by a neatly prepared Advt. in the local press, calling attention to the various lines on display. The ad. should be written in plain terms and should be changed somewhat several times while the display is on.



These few brief suggestions should, if applied, result in increased business, which is the aim of all who make advertising a practice.

TOOL WINDOW DISPLAY.

A seasonable exhibit of carpenters' tools was made last season by F. S. Lockett for the George Hunter Hardware Company, Vancouver, B.C., and although nearly 700 tools were used in the exhibit the effect does not have a crowded appearance.

The window was built up with packing cases, which were covered with white crepe paper and muslin, thus forming a direct contrast to the polished wood and steel tools exhibited.

Few carpenters can stop to examine a display of this kind without realizing that they need some article shown, and as they are led to examine the rest of the stock the result is often a sale of several articles.

Spring Display of Carpenter's Tools Made by Hunter Hardware Co., Vancouver, B.C.

Displays of Holiday Goods

Canadian hardware stores are paying more attention to the value of window advertising during the two or three weeks rush before Christmas, and everywhere special displays of lines suitable for presents are being made. Dealers are encouraging clerks to "throw themselves" on these displays, in some cases prizes being given to the clerk who suggests or prepares the most attractive and best selling windows.

That the window trimmer is not handicapped from want of funds for fixtures and other things necessary to attractiveness and for want of time to prepare the display, is shown by some of the photos reproduced on these pages. And that the allowance of time and money for window trimming is a paying investment is shown by the firms making the expenditure repeating and enlarging it year after year. As in all other advertising it doesn't pay to do it half-heartedly—do it well or not at all. The two widely different displays made at Halifax and Brandon, are examples of time well spent on displays, though it is doubtful if much money was spent by either Mr. Wetmore or Mr. Bate.

Mr. Wetmore's special "publicity" windows are well-known to readers of Hardware and Metal. A. M. Bell & Company's store is on a side street, and to get the crowd to the store Mr. Wetmore takes one of the large windows and constructs an original mechanical display, reproducing local or seasonable scenes. Then he has the daily papers write a description of the display, and by also using the firm's ads., draws crowds to the store, special policemen being necessary to keep the sidewalk clear. Of course a window trimmer of such originality as Mr. Wetmore does not stop at bringing the people to the outside of the store. By means of other window displays of seasonable goods and by live advertising, many of the window gazers are brought into the store and sales made.

The display illustrated was made last Christmas, the view being taken from the store doorway. A front view was taken, but owing to the crowds on the sidewalk both night and day, the photo taken was not as clear as the side view shown. Mr. Wetmore's own description of the display follows:

"Publicity" Window at Halifax.

"Floating above the scene is the Santa Claus airship and boat, containing toys and figures. An aeriel warehouse, perched upon rock cliffs, from which Santa Claus is forwarding Christmas goods, is situated at the north end of the window. It represents a stone building with projecting roof in centre from which are cage elevators containing toys, etc., moving up and down, passing through roof of the North Pole and Halifax R.R. Station, situated directly below, and connecting with the electric train, also passing through station. These buildings represent stone and brick structures, and have about twenty-five colored cathedral glass windows, all lighted by electricity.

"The train leaves the west end of station and travels south on the edge of the ice cliff, passing Esquimaux huts on right and left of track, backed up with arctic sunset scene, showing icebergs floating in the distant water. The train continues to the south end of the window, and enters the Halifax Junction Station, which also has numerous colored glass windows lighted by electric lamps, there being a square tower on the corner of the station, the clock in the tower giving the correct time.

"Near the north side of the station is a rustic bridge, beneath which is seen a frozen brook, made of geletine and absorbent cotton. As the train leaves the junction the doors close automatically and the train travels around the half circle on the elevated track, and thence onto stone bridge, which spans the river, jammed with ice, in which was seen a schooner yacht and barge containing packages of goods for A. M. Bell & Co. This ice is in constant motion, and is similar to the undertow seen off the Newfoundland coast during the winter season. Behind the stone bridge is seen a hunter's log cabin, with stretched skins and snowshoes. After leaving this bridge the train turns westward and crosses a railroad bridge

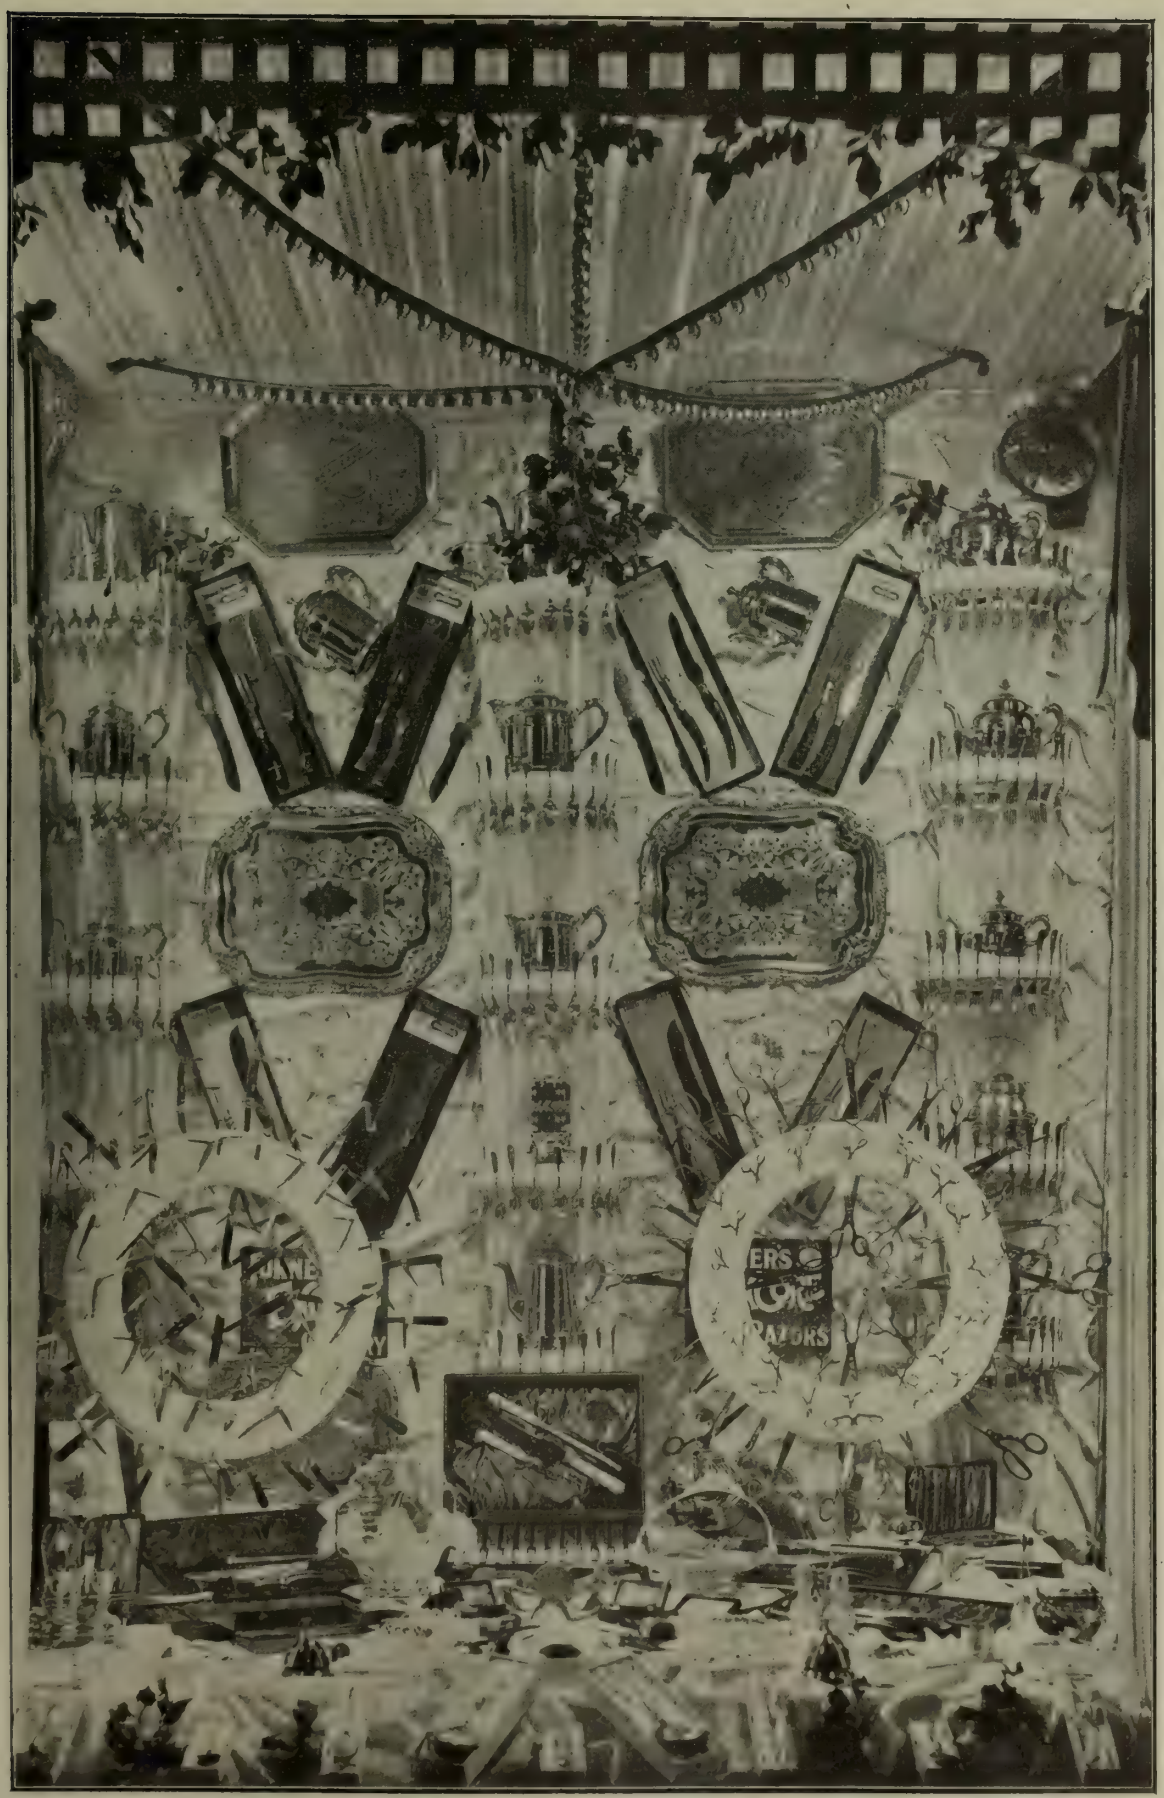
Side View of Special Display Construct ed last Christmas by S. S. Wetmore for A. M. Bell & Co., Halifax.

spanning gulch, and thence on to a lengthy suspension bridge which crosses the entrance to the icebound bay on the ice of which were seen polar bears, seals and two steamers, waiting at the pier.

"Back of the bridge on high cliffs is situated a Marconi wireless station and power house, the driving wheel on the latter revolving very rapidly. On the face of the cliff are Marconigrams, telling the movements of the airship, the contents of which are for A. M. Bell & Co.'s Christmas stock. Also scattered through the scene are numerous signs, advertising boards, etc.

"The snow consists of absorbent cotton, sprinkled with diamond dust. The cliffs and rocks, molded from paper and colored, all higher points on surface tinted with bronze, etc. Excepting the electric trains, the whole display was of my own design and construction. To give proper effects to the undertow, to run the elevators, etc., required twenty-two wheels, which were worked by a small over-shot wheel below the window."

Hamilton and Almonte Displays.



Stanley Mills & Co., Hamilton, are noted for their fine window advertising and their cutlery and silver goods display, made for the holiday trade last December, is a good sample of their work. The elevated shelving enables the trimmer to show a large line of case goods effectively and the small price tickets, not large enough to deface or hide the goods, were helpful in enabling customers to select some article within reach of their pocketbook.

Silverware and Cutlery Display made last Christmas by Stanley Mills & Co., Hamilton, Ont.

Roy Gilmour, with Torrance & Kaufman, Almonte, is another who made a commendable display during the last Christmas season, and with a modern plate glass store front, his effort would have reproduced to much better advantage. The photo was taken late at night, a half-hour exposure being made. A lot of work has been put on the trim, and it deserved to bring results. The window is large, the articles are priced, and if any criticism is offered it, it is that the same thought has not been given to constructing some strong central figure or arrangement to round off the rest of the display and attract attention. Regarding the display, Mr. Gilmour wrote:

"The display attracted a lot of attention, and the many sales directly traceable to the window is one of the best proofs that good window dressing pays. In getting up this display I took some half-inch lumber, ten inches wide, and made four pillars and from these I ran slightly curved cross piece and fastened these to the pillars so as to form two sides and one back arch which gave me a window eight feet long by five feet deep. These arches and pillars I covered with light green cloth, to which I arranged shears and scissors to one of the side arches, and knives on the other side. The back arch I arranged with plated knives, forks and spoons. From the centre of the side arches hung a round board with the centre cut out and covered with white cheese cloth. In these I stuck knives and scissors to match the arches, and on each side of these circles hung nickel trays. From the centre arch hung a row of razor

Cutlery and Silverware Window Trimmed by Walter Bate for Johnson & Co., Brandon, Man., last Christmas.

strops. Around the top of the arches I placed nickel trays, tea pots, kettles, knives, etc., with a sprinkling of holly intermixed.

"For the floor, I used three steps, the bottom one being 24 inches from the window, and the remaining ones 12 inches deep. These I covered with white cheese cloth on which I arranged carvers, manicure sets, ladies' companions, fruit knives, berry spoons, soup ladles, cold meat forks, pie knives, plated spoons and forks, razors, shaving brushes, ladies' scissor sets, etc., with a sprinkling of holly. On all the case goods I put a 3-inch round white price ticket with red figures."

and, each knowing just what they wanted, the time of the salesman would not have been wasted in showing a large variety of goods at different prices.

The window is a corner one, with glass on three sides about 6x5½ feet in size. The back is puffed with white cheesecloth, the ceiling being pleated, as is also the pillars supporting the gilded lattice arch decorated with holly. On th background are fixtures of half-circles on which rest teapots,etc., inside a neat display of forks and spoons. The arrangement of the trays and carving sets, the suspended rings of pocket knives and scissors, and the floor showing of case goods, hollow ware, etc., is

frame, should be placed back of the camera. An exposure of from 15 to 20 minutes' time is necessary for the best effect. Another method is taking the picture from an elevation equal to the height of the window, from the top of a stepladder, for instance, focusing the camera downward. This way is not as desirable.

INTERIOR DISPLAY.

On thing essential to an effective interior display is freshness and newness. More things are wrought by change than many window-dressers dream of. The average shopper likes to see "something

Christmas Window Display Prepared by Roy Gilmour for Torrance & Kaufman, Almonte, Ont.

Cutlery Trim at Brandon.

Differing entirely from the Halifax window is Walter Bate's cutlery display in Johnson & Co.'s store. As a "selling" window it would have been hard to beat, but for one great weakness—the absence of price tickets on the goods displayed. Experience has shown the wisdom of pricing every article in plain figures—in letting the goods sell themselves. Well lighted at night it is doubtful if any Christmas shopper at Brandon missed seeing Johnson & Co.'s brilliant display, but if the prospective customer could have, while outside the store, selected some article suited to his or her purse, more would have entered the store to buy, decidedly artistic, while the arrangement of sleigh bells and razor strops at the top round off one of the most commendable window trims ever made in a Canadian hardware store outside the larger cities.

PHOTOGRAPHS OF WINDOW DISPLAYS.

Photographs of window displays should be made at night, with lights in window burning. If there are no lower lights along the base of the window, they should be put in temporarily, cardboard being placed over them to prevent glare. A shield of black cloth of the same dimensions as the window

new" each time he or she goes in. Nothing is more repulsive to the shopper's eye than a month-old display with the usual accumulation of dust, and nothing is more pleasing and attractive to the shopper's eye than a bright, clean display new every week. Freshness and newness are not only effective in themselves, but they signify enterprise, industry and ambition on the part of the clerks—qualities not altogether common. Frequent changes in the shelf and counter arrangement aid in showing up all the lines in stock.

In every store there is something that will appeal to the ordinary man and woman. By frequent changes the merchant will be able to find out what

that something is and the probability is that a sale will be effected. There is a possibility of going to the extreme in the matter of changing the display, as in everything else. An over-dressed interior arrangement is just as awkward and ineffective as an overdressed man. Too complicated an exhibit may also be easily made; confusion should above all other things be avoided. The appearance of continual housecleaning is also a detractor. The display should be altered frequently, but not too often to obliterate its familiarity or identity from the eye of the shopper.

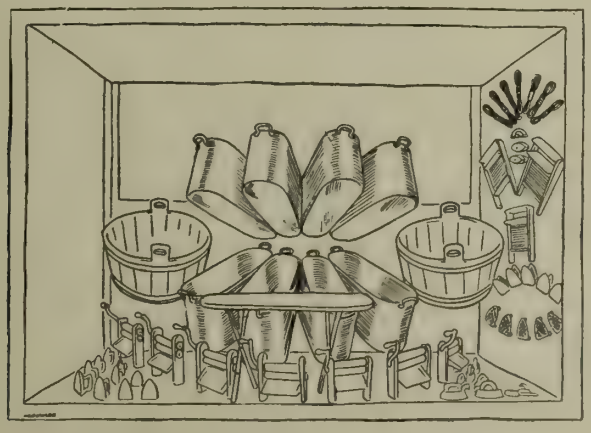
LAUNDRY GOODS DISPLAY.

The striking feature of the laundry window trim suggested by Hardware, New York, lies in the arrangement of the washboilers shown in the background. To secure this form the boilers must be suspended by the handles from wires attached to the ceiling. The advantage in this arrangement is in showing the bottom, sides and inside of the boilers in addition to making a unique arrangement that will attract attention from "across the street."

The tubs are also suspended in positions against the partition. The irons, iron standards, wash boards, clothes lines, etc., may be arranged in a number of attractive forms. The sketch simply shows the general arrangement of the window. There remains plenty of space in which other supplies may be displayed.

NOVEL FISHING TACKLE DISPLAY

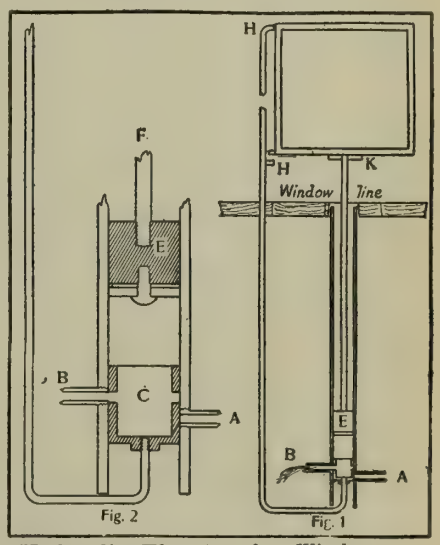
The Columbus Sporting Goods Company, Columbus, O., in arranging the window display shown in the accompanying engraving, had a tank extending from one corner of it to the other corner diagonally. The tank was a foot deep, 16 feet long and three feet wide, a bank running up to the tank. They had running water and live bass in the tank. It attracted a great deal of attention and comment, and the sidewalk was lined with people continuously.



A Sporting Goods Window.

UNIQUE FISHING DISPLAY.

An attractive mechanical fishing tackle window can be made by posing a dummy dressed as a fisherman with a rod in his hand. Have the line run to a brook painted on a scenic background. Let the line pass through the canvas and connect with a wheel. As the wheel revolves, the line will be drawn tight and then loosened, causing the fisherman's rod to bend and straighten as though he were playing a fish.



HYDRAULIC ELEVATOR FOR WINDOW.

A moving device in a show window attracts attention, which, creating interest and criticism, actually sells more goods than an ordinary display of stock, even though the model is something foreign to the business.

Suggested Laundry Supply Window.

The cuts show an hydraulic elevator elevator that moves up and down the guides continually as long as the water cock is open. The device is comparatively simple and inexpensive, can be constructed by anyone, and made as elaborate as the maker desires. The operating valve is the most important part and is plainly shown in Fig. 2.

Hydraulic Elevator for Window.

The jacket is made of ¾-in. brass pipe, as long as the rise is intended to be. The top end of pipe can be flush with the window line, which leaves all the mechanism out of sight, the only visible parts being the plunger rod, valve rod and guide bars for the car, which are made of ¼-in. square brass rod.

Perhaps the best way to realize the full value of a show window is to hire a few. That which we are accustomed to use daily has a tendency to seem of smaller account than it really is. The show window is of value in several ways; to admit light, as a place to display wares, as a power to draw customers into the store. Never treat it lightly.

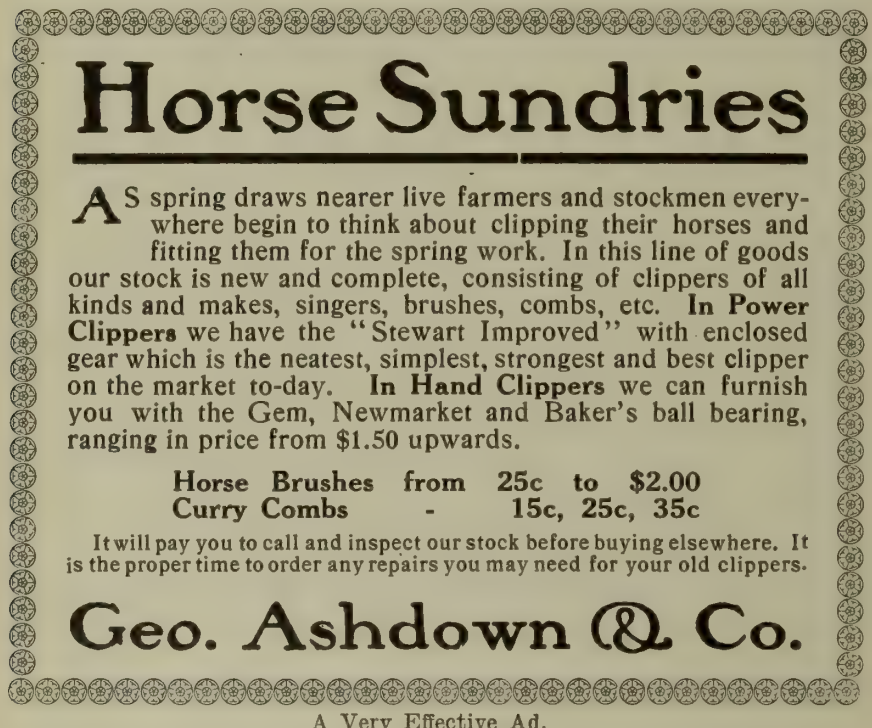
Effective Retail Hardware Advertising

W. F. Ralph Points Out the Foolishness of Curtailing Advertising Expenditures During Season of "Tight Money"—Use Cuts and Name Prices in Order to Encourage Buyers.

When a railway train is fighting its way through a fierce blizzard, when the rails are slippery, the steam hard to keep up and all the elements appear to have entered into a solemn pact to prevent that train reaching its destination; wouldn't it be foolish for the engineer to throw the fireman out of the cab, sit down on a lump of coal and let the blizzard do just what it liked?

Sure it would!

Just as foolish it is for a merchant to quit striving for business by all the means at his command—especially when the public has an idea that it is being visited by hard times.



perceive that advertising is more than ever necessary when the wad isn't disposed to loosen of its own accord.

In an extended era of prosperity luxuries evolve into necessities. When the average man has a full pay envelope coming to him every week or every month with joyful regularity, he cultivates a taste for certain things which he finds hard to abandon under less propitious circumstances.

That is the standard of living being raised.

Advertising plays a very strenuous part in the game of standard of living raising. Advertising educates Mr. Average Man to buy more goods and better goods for the use of himself and his family. The money thus spent in response to advertising promotes the business of producing the more goods and the better goods which Mr. Average Man and his family have been educated up to.

Thus does the standard of living of the average man—which is the pride of Canadian democracy—depend to a very great extent upon advertising.

A Very Effective Ad.

Judicious advertising has come to be recognized as the motive power of modern merchandizing. And when a merchant has extra force to contend with, when his customers show signs of disinclination to buy, then is the time of all times to apply more motive power.

If Money is Scarce—Advertise.

The merchant who cuts his advertising appropriation when the buying public is most careful of its money, casts aside persuasion when only persuasion will loosen the public wad.

Moreover, he leaves himself at the mercy of his wiser rival, who is able to

Advertise for Personal Benefit.

Now you, as an individual distributor of hardware, may or may not be interested in the broad subject of raising the national standard of living. You may not care a continental cuss whether the condition of the average man of the whole community is good, bad, indifferent or devilish. But what you are most intimately concerned with, in any case, is the financial condition of yourself—that's human nature.

Your financial condition depends upon your efficiency in selling hardware. You are successful to the extent of the hardware you can profitably dispose of.

Unless you are a lonely hardwareman, located in the middle of a large and fairly well populated district, with no rivals in sight, and are quite contented with the business you do, you can increase your efficiency as a distributor of hardware, by using Advertising.

Even if you are such a lonely hardwareman you can't really afford to neglect advertising; for it is in just such circumstances that the mail order catalogue comes gaily along, and, with its nicely printed and illustrated arguments, set off by prices which omit the mention of such trifling details as delays, express and postage charges, etc., and alienates many of your paying customers.

The Mail Order Catalogue.

The reason the mail order house gets in ahead of you is that it doesn't wait to be asked for something. It goes into the homes of the people in the shape of well-written, well-printed, well-illustrated suggestion. It manages to persuade people not only that they can get better things cheaper from it, but also that they really ought to be using more things.

You can't very well get up anything as elaborate as a mail order catalogue; but if there is a weekly newspaper circulating in your locality you can take some of your goods into the homes of the people 52 times a year. You can get at them with fresh energy every week, while the mail order catalogue only comes fresh twice a year.

This is a means of introducing your goods to the buying public, which you can afford all the time—if you use the space right.

Lack of good advertising copy has killed the confidence in advertising of many a budding advertiser. When a merchant buys space in a newspaper he is up against the problem of saying something in it which the public will be interested to read, and of saying

it in such a manner that they can't resist reading it. When boiled down, all advertising science consists of having something to say—and saying it right in the proper place.

Suppose you are advertising a new kind of can-opener, which you firmly believe to be an improvement on every other kind of can-opener. In the first place, you must remember that this is an age of canned goods, and everybody has some kind of a can-opener. So that an ad. like this:

> **Can-Openers,**
> **15c. Each.**

wouldn't be likely to sell very many. The price is not very cheap, and the article is one which the majority of your readers are already possessed of. As an article at a certain price, the ad. has little attractive value. But if the can-opener has certain distinctive points, say so. Tell the people what it'll do, how it will save time and trouble. But don't be long-winded about it—state the facts in terse, every-day language. If possible, show a picture of the article.

This applies to pretty nearly every advertisable article. State the points. Show the reader just what he's to get for his money. Make him feel that he can see the article you are advertising. When you are writing the ad., imagine you are exercising your salesmanship over the counter. Don't get balled up as soon as your pencil touches the paper by imagining that you are writing an essay for a literary society. The language that Farmer Jones can understand best over the counter—the language that Farmer Jones uses every day in his social or business dealings (exclusive of cuss words)—is the language that will best appeal to Farmer Jones in a newspaper advertisement.

Use Cuts and Give Prices.

There was a certain Teutonic gentleman who was very fond of sauerkraut. And when visiting a friend one day, the host, knowing his friend's fancy, gave him lots of his favorite delicacy. After having eaten to his capacity the Teutonic gentleman called a halt by exclaiming: "Ach! Too much iss enough." This remark can be very aptly applied to the use of cuts in advertising.

I came across a hardware ad. some days ago which presented the reader with three columns of assorted cuts, arranged in the most fantastic and confusing manner. All of the articles shown were very common, everyday articles, such as could be found in almost any home, and there was nothing at all in the whole three columns of valuable space to suggest a purchase to the average reader. Not even a price was given. The value of the individual cuts was, in most instances, completely eliminated by the nature of neighboring cuts. For instance. Placed beside a sled on which were standing a row of men to show its strength, was a razor which could have held upon its handle all the men standing on the sled. In front of the row of men, and directly on a level with the first man's face, was a kettle as big around as three men. Placed beside a woman operating a washing machine was a doll big enough to swallow the woman and the washing machine and be none the worse off for doing so.

By using one-third of the cuts and arranging them so that the relative proportions of each would not be obliterated by the proximity of another, and by using a little descriptive talk and a little argument as to values, etc., and by the mention of price, the effectiveness of that three column space would be wonderfully increased. Truly, too much is enough!

Illustrate but avoid over-illustration, as you would over-much "talk." See that each cut you use is sufficiently isolated from other cuts to make its proportions clear and its meaning plain—and, in a retail ad., never forget the price.

The "Oil Heaters" ad. of Fennell & Chandler, is a good one in all respects, save one—lack of prices and details. The solid headline, "Oil Heaters," is bound to catch the eye, especially during a cold spell when anything about heat is interesting to the average householder. Read the "copy"—it is good. It answers three distinct objections which are liable to arise and which would naturally be raised if a sale was being made over the counter. But this ad. becomes weakened by the statement in the last two lines that "we have them in different styles and prices." The ad., I believe, would have been more effective in bringing inquiries were the body set in type of a smaller size, and one style of heater mentioned, with all its good points emphasized and the price attached.

An opportunity for a good ad. of the "special sale" variety has been missed in the ad. of L. W. Sleep. Mr. Sleep, according to his ad., was anxious to get rid of a few pairs of Cycle Hockey Skates—so much so that he found it profitable to unload them at half-price in order to clear. But neither the regular nor the sale price is mentioned in the ad. When a departmental store has a half-price offer to make the comparison between the regular and the special price forms an enthusiastic theme for the ad. man. And if any advertisers are successful it is the modern department store. Consequently, it is worth the while of the smaller retailer to keep the successful method of sale price advertising in full view when he has anything in that line to offer the public. Consider how much more effective the space of Mr. Sleep would have been were it filled after the fashion of Sleep ad. number two which is offered here as a suggestion.

In framing a special sale ad., it is a good plan to take the public into your confidence. Assume to begin with that the public are interested in your offer. Then talk to them as if you had a probable purchaser standing before you. Give them the reason for the special price and state whether the goods are worth the regular price or not. Interest

> **OIL HEATERS**
>
> The kind that gives satisfaction. No smoke, no smell, no danger, can be carried from room to room. We have them in different styles and prices.
>
> **FENNELL & CHANDLER**
>
> **The Stove Men - Charlottetown**

the buyer in your proposition from all the points you can. If you are offering him a half-price proposition, from all the points you can. If you are offering him a half-price proposition, remember that the average person is liable to be suspicious of its genuineness, so it is necessary to tell him the "why" of it before you can convince him that he is getting a real bargain.

The "Horse Sundries" ad. of Geo. Ashdown & Co., is a good one. Observe that the nature of the headline and its prominence is such that it could hardly fail to attract the attention of any person interested in horse furnishings. The border also, being unique, very effectively isolates the ad. from its surroundings. With the attraction of the reader's attention the duty of the headline has been well done. The "copy" following excites the interest because it talks of something which is probably floating around in the reader's mind at the time. Then it sustains the interest by the mention of several appliances, together with their various points and their prices. This ad. appeared in a recent issue of the Empire, Morden, Man. And Ashdown's store is probably well enough known in the vicinity to render its exact location in the town an unnecessary detail.

PLANNING THE YEAR'S CAMPAIGN.

Some small village merchants (not really good advertisers) sometimes spend only a fraction of one per cent. of their turnover for advertising, while a few patent medicine concerns and circus proprietors invest as much as thirty-five to forty per cent. of gross receipts. But the usual advertising appropriation for a hardware store that is up to date should be 3 per cent., writes Ralph Harris, manager of "Brains."

A practical division of this appropriation for a business of say $25,000 a year, would be a total appropriation of $750, divided as follows:

Newspaper Advertising	$625
General Circulars	100
Emergency Fund	25
Total	$750

If you are in the habit of issuing a regular catalogue, its cost should be added to the regular appropriation.

Now, to decide when and where to use your newspaper space. First, we will say that the newspaper rate is twenty cents an inch; this would give you 3,125 inches of space to be used during the year. Most papers have time and space discounts; that's one reason why it is well to contract for the year's space in advance so that you can take advantage of such discounts. You might allow for four inches double column each day or eight inches three times a week. This would leave 619 inches for special sales, bargain ads., and unusual announcements. Six hundred and nineteen inches means nearly twelve inches weekly, which you can add to any one or two days' ads., as business conditions demand.

In this way you plan within your appropriation, and, instead of exceeding the proper amount before the end of the year, you can always keep a check on the amount used. If you keep your advertising systematized in this way you will find it a profitable, and fascinating business game. If you go at it in slipshod fashion you lose money and interest, and find it a source of inconvenience.

We have a few pairs

CYCLE HOCKEY SKATES

which we are anxious to dispose of.

Will Sell at HALF PRICE in Order to Clear

L. W. SLEEP

Sleep Ad. No. 2—A Suggestion.

A PRICE MISTAKE SCHEME.

A novel idea was adopted recently by the advertising man of an Illinois concern in exploiting a sale. He distributed, by mail and otherwise, something like 3,000 circulars, and on each circular appeared the notice that five circulars out of the lot would contain mistakes in prices; for instance, in one circular a $10 punching bag and stand would be priced at 25 cents; in another, a $4 football would be priced at 15 cents; in another a $3 pair of boxing gloves would be priced at 10 cents, and so on down on other articles to three cents. As stated, these "mistakes" were to appear in only five circulars, but the chance of obtaining the benefit of them of a circular to read it over mighty carefully. The ad. man states that all the five circulars were returned and the names of the lucky ones were published in the concern's newspaper ad. As a result of the circular and other advertising the sales were larger than on any previous occasion, and so great was the success of this "Success Sale" as it was termed, that several other concerns in the city held special sales to get even.

To polish your show windows, making them as clear as day, use the following paste, applying with a soft rag, and rubbing off with another soft, dry rag. Take of prepared chalk, nine ounces; white bole, one-half ounce; jeweler's rouge, one-half ounce; water, five ounces; alcohol, three ounces. Mix thoroughly.

Exact Cost of Doing Business

A Concrete Example of How Necessary it is to Know Just How Much it Costs to Sell Each Individual Line of Goods—An Increase of Sales, With Shrinkage of Profits Explained.

The board of directors' yearly communication lay before the general manager of the Mann Mercantile Company. It was his first news of the proceedings of the annual meeting. For Johnston was not a member of the board of directors; in fact, no one really was—except Benjamin Mann, founder, ninety-nine per cent. owner, eleven-months-of-the-year-absentee president of the Mann Mercantile Company. So this polite and ambiguous letter to the general manager, expressing the directors' appreciation of his personal faithfulness, but also their disappointment in the year's meagre profits and their hope that the coming year would show increased results—this was really a direct message from Benjamin Mann to Oliver Johnston to the effect: "Show a bigger profit in the next twelve months—or your resignation."

Sales More—Profits Less.

Johnston's call button rasped. A word to the answering messenger boy brought in the treasurer—built on the order of Mann's directors—a glorified cashier and head bookkeeper. The general manager went right to the point. "Braun," he said, "you and I are the only men outside of the directors who know that this institution made less money this year than last, on a twenty per cent. greater volume. We were surprised, puzzled. Our one-man directorate is more than surprized. And it is up to me to find the cause and remedy it. My hunt begins to-day—the tenth of January—I want no further time handicap, for I have got to find the goal and make the run by December 31. Have you any idea as to the source of the trouble?"

"I am checkmated on this question," the treasurer replied. "You have our figures; sales nearly one-fourth more than last year—gross profits as large in proportion—all departments showing the necessary percentage of profits on the books; yet expenditures went away up and more than absorbed the additional gross profits."

"If you can't tell me, no one in this house can," Johnston said. Then, decisively—"I will know. To-morrow a new clerk comes into the executive department. Tell him everything, give him anything he wants, open up our books to him. He'll have to be the Stanley of my Livingstone in the Africa of the Mann Mercantile Company."

So, on the morning of January 11, I entered the employ of the Mann Mercantile Company as general clerk. It was a progressive store I began to study—full of the hustle and ambition of young men, and yet well directed by the merchandising ability of its manager. The books showed the situation: An increase in volume of sales; corresponding increase in gross profits, for the margin between costs and selling price remained the same; but the expense list had taken an unwarranted increase. On the expenditures, therefore, I concentrated my attention.

Items of Expense.

"The first data I want to get from your books, Mr. Braun," I said to the treasurer, "are the items of expense for last year and this year."

"We can give you those in an hour," Mr, Braun answered.

The two sets of figures came to me, item by item—rent, light, heat, labor, equipment, repairs, delivery expense, supplies—all the expense accounts. They brought out nothing startling, or even significant; the percentage of increase was uniform over all. No one item, as I had hoped, showed a comparatively greater rise, thus marking it for special attention.

"Either some adverse general condition or some broadly mistaken policy of management," I reported to Braun at the end of a day's scrutiny of the figures, "has caused this proportionately large increase in expenditure, or there is some one part or another of your store responsible for the increased expense in all lines. The next point, therefore, is to find what the increase in expenses has been by departments."

"But my books won't show that," the treasurer answered. "This is not a department store, you know, though we sell different varieties of goods. All expenses are figured in totals and charged to the store as a whole."

Expenses Not Distributed.

"But you surely have distributed your expense," I protested, "so that you know how much labor, how much rent, how much delivery expense, how much of any general expense, is to be charged to each general merchandise division of your business?"

"Nothing of the kind," the treasurer answered, "In the old days Mr. Mann, and now the present manager, have had complete and direct charge of the business; the figures of sales, which are kept by lines, and the general expense totals enable them to know the condition of the business."

The statement was made with such assurance that I was nettled.

"Why is this investigation going on," I demanded, "if these figures show the condition of the business? It's because your manager does not know the store's condition that we are making this analysis. What's the use, for instance," I added, "of knowing the increase in sales by lines when you don't know whether the expense of selling those lines is increasing proportionately?"

The treasurer made no reply.

"Let me see," I asked, "the report of sales by lines for last year and also for the preceding year."

Here I struck something. Not a clue exactly, but at least something different. There was a general increase in the volume of all lines, but five lines had increased very much more than the others. I looked up the location of these lines in the store, the stock carried of each, the gross profit they showed. At the end of the day I dropped into the general manager's office.

"Have you started any new departments this year, Mr. Johnston?" I asked casually.

Three New Departments.

"Yes," he answered. "Three—although no one of them is extensive. We opened a music-box and phonograph department just before the holidays of last year. Then in the spring we introduced a line of sheet music, and as the goods seemed to be akin, we put in books a little later."

"And are there any lines of goods that you pushed harder last year than you did before?"

"You bet we did." And the salesman's spirit within him kindled his eyes. "We certainly cleaned this town up on library desks and display counters. Times are prosperous; there have been a great many developments in this line of goods lately. Everybody seems to be putting in new equipment, and I was bound that we would get what was coming to us. I happen to know we got a good deal more. We did nearly half the business that was done in this town in these lines."

Then, as if recollecting that I would probably not be interested in the little gossip of the store, he added. "How are things going; any news?"

"No, not yet," as I arose and swung the door. "I won't have anything to say until I have something worth while to report."

A Thorough Inspection.

The next morning we set two clerks from the accounting department on what turned out to be a long job—the distribution of all expenses by departments or lines of goods. It was not only a long task, but a very difficult one. It meant going over every item of expense, every pay roll and invoice, charging the wages of the clerks to the goods they sold, charging each department its proportion of the rent, heat and light, according to the space it occupied, going through the delivery slips and charging each department according to the time that had been spent in the delivery of its goods. And even harder was the distribution of the general expense—the superintendence, the janitor work, the accounting and administration expense. It was two weeks before I had all my detailed figures ready for assembling, and when I began this final stage of the work I felt like an engineer must feel when the next blow of the pick is to join the two ends of his tunnel, according as he has calculated them in his blue-prints. Here I must find the trouble point—or I could find none, for my study of the business showed me no other opening in the apparently strong front of the management. The next morning I went in to see Johnston with two sheets of paper in my hand.

"I have something to report," I said, significantly. And although it was his busy hour, he cleared his desk and his office.

Cost of Selling Goods.

"Have you ever thought, Mr. Johnston," I began, "of exactly how much it costs to sell a sheet of music, or a chair, or a desk, or piano?"

"I know the percentage," he came back quickly. "My monthly reports give me that."

"But I mean in a more detailed fashion than that. Have you any idea how much clerk hire it costs to sell a chair—how much rent, how much wear and tear on equipment, on your door springs even, in that one sale—how much of your superintendent's and your floorwalker's and your door opener's time it takes to handle that one customer? How much it costs to enter and post the bill and collect the account on that one chair? How much it costs you to deliver the goods?"

"It's all in the percentage," Johnston repeated, but his answer was not so cock-sure as it had been before.

"I can tell you," I said, "how much it costs you in rent and light, and heat and clerk hire, in superintendence, in wear and tear, accounting and administration to sell, if not one chair, at least all the chairs you sold; or all the pianos you sold, or music-boxes, or desks or books. That is more than you ever knew before isn't it?"

"Yes," he said, "more than I cared to know, because it is only itemizing, it is only dividing up the entire expense. As long as I know the percentage I know where we are at."

"But you don't know the percentage. You know, for instance, that your profit last year was four per cent. on all the goods you sold, taken in lump."

"Yes," was the answer.

Uneven Profits.

"You have not known until this moment that while you made 4 per cent. on your chairs, you made six per cent. on your rugs and carpet, only one per cent. on your books, and that you lost money on the sheet music you sold, and on the musical appliances, and on the library desks, and barely played even on the counter line?"

The general manager had the right-hand drawer of his desk open before my statement was finished.

"That's impossible," he asserted, as his hand placed the last report on his desk. "On musical appliances, for instance, we made a gross profit of fifteen per cent., and our operating expenses are only ten per cent., so we made five per cent. there. On our sheet music we made a little less, I confess. The gross margin there is only fourteen per cent., but even there we made fully four per cent."

I laid my sheets down on his desk. There was a department for each sheet. First, there came the total sales of that department for the previous year by months, and then for the year before that; opposite were the expenses for the two years by departments, itemized into the various expense accounts.

Weak Link in Chain.

"Here is the proof," I said. "It is absolutely correct, as your accounting system will allow, and while your accounting system has not told you much, its original entries are doubtless correct. But I tell you here what the actual expense of each part of your store has been. When you come to think of it, you cannot expect it will cost exactly the same percentage of the selling price to sell a piano that it does to sell sheet music or a library table or a book. Coincidences don't come so uniformly. It may cost twice as much in percentage to sell one article as it does another. Just because, to get your selling price, you mark all your goods up twenty per cent. from the cost price, you can't be sure that it does not cost twenty-five per cent. to sell sheet music, and perhaps only five per cent. to sell chairs."

"But why is not your method as much a guess as ours?" Johnston asked. "How do I know that it cost $20 for rent, for instance, for our sheet music department, and $24 for heat and light, and $520 for clerk hire?"

"Because it actually did," I answered, and I proceeded to explain to him the basis of the figures before him "It's a very easy matter to determine the total clerk's wages for any department for a year. It is merely the process of picking out the people who sell a certain line of goods and totalling their wages. It is just as simple to find the rent, the heat, and light for a department; that is a process of dividing the total number of square feet in the store by the number devoted to this department, and charging the same proportion of the year's rent. The superintendence is a little more difficult, but that can also best be arrived at on the basis of space, as can also the general wear and tear of equipment. Administration and office expense are charged in proportion to the department's volume of sales."

And so I went through every expense account, showing exactly the basis on which the distribution was made. Buried in the interesting details which I had opened up to him, the general manager failed to see the forest because of the trees.

New Departments Didn't Pay.

"These figures are interesting and they will doubtless help the management of the business; but how do they show what has been the matter with out profits?"

"Right here," and I picked out five sheets from the pile. "You pushed two departments particularly hard this year, chiefly to overcome competition. You lost money on both these departments. You opened three new departments; one was very successful; the other two you lost money on. Now, why? You lost money on library tables and display counters because you were bucking against competition; you sold on too close a margin, did a great deal of advertising, and hired special salesmen.

Your sales expense, plus your general expense, more than consumed your gross profit.

"You lost on sheet music because not only is the margin comparatively small, but each sale is for but a small amount. Then the department takes up a good deal of room; it requires a great display space; you have a piano there on which pprchasers try the latest popular airs. And your gross profit is, therefore, more than eaten up by your general expense in this department. The same applies to books."

Johnston sat silent, his chin resting on his hand. He was waiting for more.

The Remedy to Apply.

"Now take the year's business; subtract from your total expenses the expenses of three or four departments. The resultant profit would be larger than the actual profit you made last year, while the percentage of profit would show an even greater increase!

"I have shown you the cause. It carries with it the remedy. How that remedy should be applied is for you to say. Some of these departments you can doubtless drop; others you must keep in order to hold certain business for other lines. In one or two of the departments you can make such changes that they will show the right margin of net profits."

The general manager rose abruptly and picked up the sheets. "There is more important work for me to do today," he said, "than sit at this desk. I am going home to my library to work this out."

"Mr. Norman," he said, his hand on my shoulder, "you have shown me the goal and the straight path. I have got to run to make it. The rest ought to be easy."

And it was.

Index and Card Stock System

Its Many Advantages to the Retail Dealer in Locating Stock and Taking An Inventory—How It Can Be Installed With Little Expense.

Every retail store should be indexed, very carefully and thoroughly. There are several reasons why this should be done. One is that it preserves that admirable condition expressed by "A place for everything, and everything in its place." It also helps to keep the stock up, preventing the "just out" condition. It also helps to keep tab on the rapidity with which any certain stock moves. It preserves a record of prices, frequently settling disputes and often saving money on buying. The hardest part of keeping a card index is the installing. Afterwards it is easy, requiring only care. But even the installation is not so hard if properly gone about, the time devoted to it being the slack hours.

The card index system is much preferable to the book index system, for several reasons. It is more convenient to install, for it is more elastic. It is more complete in its efficacy, as it permits of the filing of a great deal of data that could not be cared for by the book system. It is neater and easier to refer to. It is cheaper in the end, because it will outlast a book system, the latter having to be removed as soon as one department becomes cramped for room, or as soon as the pages are worn out. With the cards there is no limit to the size to which it may be stretched, if desired, and the wearing out of a card means only to replace it with a new one. Besides, with the book system, old entries are liable to be scratched off and, indeed, that is the only way to dispose of them, while with the card system cards for stock that is out of date and cards that are too full for further additions may be filed in "defunct" or transfer drawers, where they are easily accessible.

ARTICLE._____ WHERE STORED._____

IN STOCK	BOUGHT						INVENTORY			
	FIRM	DATE	QUAN'TY	PAID	SELLS AT	PROFIT	DATE	ON HAND	VALUE	REMARKS

Card Used in Keeping Record of Stock.

Details of Cards.

The cards should be four by six inches in size, filed in drawers. Different colors may be used for different departments or classes of stock. The cards should be ruled, both vertically and horizontally, both front and back. No card should be devoted to more than one article. One side of the card should carry, at the top and right-hand side, the name of the article. On the left-hand side should be placed, in the first column, under the title, the amount in stock on the date the card was filed, entering the date in the second column. Then, thereafter, whenever a new supply arrives put down the amount, date, name of firm from whom it was purchased, price discount allowed, price it is to sell for, and, whenever the selling price changes, date the change; condition it came in, whether good or bad. With some articles this last entry is not necessary. The reverse side of the card should carry at the top the name of the article and its location in the store and in the storeroom. The lower three-fourths may be used as a continuation of the front side.

It is not necessary to have a column for every entry to be made. The date of the change in selling price, for instance, may be noted in the same column with the price only in another color of ink. Same with the condition of arrival, when the condition is bad a cross may be placed just above the price or somewhere else where it is not liable to escape attention. It is easy to see the importance of this system as far as it is used to denote location of stock. Many a merchant has forgotten stock piled in remote corners and is ordering new. It saves time and money. The buying record it affords is highly valuable in buying, for from it you may get a line on the last prices you paid, whether the goods are moving rapidly or not, and, in fact, the complete information without which you can not buy to the best advantage for yourself.

Helps in Stocktaking.

The stock and index card system is also of great value in taking an inventory; often shortening that work by several days. And all this costs only

a little time in installing, and after that not so much time as you would waste for the lack of it if you didn't have it; and, from $10 up, according to the size of index needed. Never throw a card away. This is important, for you do not know when you will want to refer back to it. Cards should be filed in a transfer drawer as soon as they are filed, and the same should be done with cards of articles no longer in stock. In the case of filled cards the new or "live" card in the working case should bear a mark showing that a preceding card has been filed in the "defunct" drawer.

Never, not in a single instance, should the system be neglected once it is installed. A card should be made for everything in stock. Every purchase should be entered. No system is of value unless properly carried out. Do not trust to memory; put it on the card. Of course, in denoting the location of stock, the store will have to be divided into compartments and each given a designated number or letter. The best method in most cases is to give each show case a double letter, like AA, BB, CC, and so on. The shelf compartments may be lettered and the shelves numbered. Drawers may be treated in the same manner. Then, after this is done, it is easy to tell, when the card says a certain article is at "G3" that it is in compartment G, shelf 3, or, if it says that it is in "S. R. G. 8," that means that it is in the storeroom, in compartment G, shelf 8. The method is very simple.

With this method should be a record on each shelf, wherever such a record would be of assistance, giving a list of the articles belonging on the shelf. This may be placed out of the customer's sight.

THE ANNUAL INVENTORY.

Taking the annual inventory has often been a source of a great deal of annoyance, worry and long hours, mixed with a great deal of black, sticky, musty dirt. An inventory is a good cultivator of patience, unless, indeed, it causes a man to lose what stock of patience he may have had in the beginning to take down and figure up his stock. Inventories can be taken in several different ways, but the following method, described by a member of a western firm, is considered one of the easiest and best ways to take stock:

"We close our books on the first day of February of each year, consequently with the limited help we have at our disposal, it requires us to commence invoicing on the 15th of January. Right after the holidays we commence straightening up the stock, and prepare to count the broken packages on our shelves. We straighten up the goods, arrange same for invoicing, clean up the cellars, tin-shop and our wareroom where we carry our surplus goods, and we have everything clean, arranged and ready before we commence to take down stock.

A Practical System.

"On the fifteenth of January we commence at the front end of our builders' hardware and shelf-goods department, and we count the number of articles in each broken package and place a slip of paper on each article, stating the quantity, size and cost of same. After we have counted same we commence to take the stock down, which takes a very short time, as we have two men taking down and two men calling the stock at the same time; and if we had more men in our employ that were competent for this kind of work we would work as many crews of two men each as we could to get the stock down on paper just as quickly as possible. The sooner the better, for if the slips are left too long on the shelves you will find that some will get lost, which is undesirable, as it requires you to stop and recount the box, causing delay. And, again, if the slip is lost you might omit calling some article which would not appear on the invoice; but if you are careful, by having your stock arranged right on the shelf and the man calling has his eyes open for any lost tickets, I believe you will have very little trouble in this direction.

Quantities and Cost Marks.

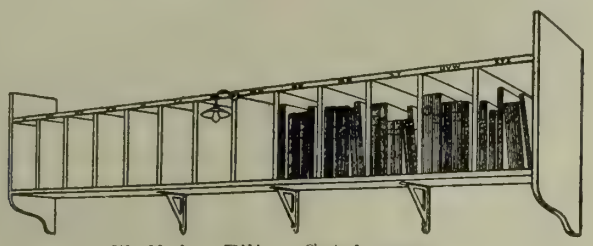
"In regard to these slips, it is very important that you should put the quantity down by the dozen when the cost mark on the goods is by the dozen, and if the cost mark is by the piece put the quantity down as such and not by the dozen. The same thing applies to the man calling off the stock. We should be careful and call the articles by the dozen if so marked, or each as the case may be.

"It is very important that you get the stock down on your invoice in proper form. We try, so far as possible, to get the different classes of goods down on our invoice by themselves, and avoid scattering them, as we may wish to know what we have invested in certain classes of goods and it enables us to figure them by lists and discount to better advantage in getting the market prices. We use a loose-leaf order sheet similar to the order sheets used by the wholesalers, which have a net price column, a list column and a third column for extending the final price of each article. We number these sheets consecutively as we go along in taking down our invoice so that we can keep track of the number of pages.

"Our shelving is constructed in sections, there being twenty sections in all. We designate these sections as "Upper Section" or "Lower Section" on our invoice sheets. For instance, we start with "Upper Section No. 1," which takes in all the full or unbroken packages in section one, and when these goods are taken we take "Lower Section No. 1," which contains the broken packages, and we continue this method through the entire twenty sections. The advantage of having the goods in these sections is that we can refer to any article in our shelves from the invoice and a great many times we have occasion to consult our invoice in order to locate certain goods. It also familiarizes our clerks with the places for different classes of goods and they have no difficulty in putting new goods away on the shelves, after they have been received, marked and are ready to be put in their proper places.

Net Prices in Plain Figures.

"In taking down our invoices we put the net price of each article in the 'Net' column in plain figures, and if we know there has been any great change in price on these articles we will put the price down in our cost mark. This enables us to look the price up when we are extending the sheets, and if the price has changed we invoice the article at market price. We also mark this item with a blue pencil, and after we have figured the invoice we run through it and remark all the goods in our stock that have this blue pencil mark. This method keeps us in touch with changes in the market price of our goods, and as far as possible we try to get as near the market price as we can."



TAKE CARE OF CATALOGUES.

The catalogue is a text-book of the trade, writes W. R. Sandelbach in the Sporting Goods Dealer, and it is a matter of doubt as to the extent the average dealer uses and values his catalogues. The books issued from time to time by the manufacturers and jobbers should be well taken care of and studied by the trade as a collection of these books can be made to form a valuable library and asset worth dollars to any wide-awake dealer. Sales of goods, not kept in stock, can be made by a merchant conversant with the catalogues of the different lines, who knows where to put his hand on the right book at the right time.

When you receive a catalogue and price list make it a rule to study it carefully, make a note of the prices and put your book where it can be found when wanted. A great many dealers throw their catalogues, price-lists, etc., promiscuously in drawers or other out-

of-the-way places. They are not classified or indexed, but thrown into the pile just as they happen to come in. Catalogues kept in this manner are of very little use to the merchant. Stop and think for a moment of the amount of money put into the catalogue, and you will then hesitate to throw it aside. A very simple and inexpensive method of taking care of his catalogues is shown in the accompanying diagram and summary of the system, and it can be made and put up by any clerk.:

Take two pine boards about 1 in. x 10 in. x 16 ft.; put lower one forming a shelf on the wall, supported by three steel shelf brackets 8 in. x 10 in.; place

Shelf for Filing Catalogues.

the other board 14 in. above the first; this board will be held up by the partitions dividing each section. The partitions to be ¾-in. thick, sand paper till smooth, then oil, shellac and varnish. Each division to be neatly lettered. It is preferable to have one long shelf, but if crowded for room, it may be divided into two or more shelves to suit the space. Put all catalogues under the maker's name, the Dominion Cartridge Co. would go in apartment "D"; the Ross Rifle Co under "R," etc.

TRADE DISCOUNTS.

We very often see goods advertised at 25 per cent. and 30 per cent. off, and it is surprising to note the number of merchants who feel absolutely certain that they are getting cost out of their goods, when, after advancing say 25 per cent. on the cost, they make a sale and allow 25 per cent. discount from the selling price, whereas they are actually losing about 6½ per cent. on the transaction. It should be remembered that 33 1-3 per cent. on cost is 25 per cent. off selling price, and that 50 per cent. on cost is 33 1-3 per cent. off selling price.

It would be a good plan to study out these percentages, and when it is necessary, to reduce prices on certain lines, a percentage could be arrived at which would bring the selling prices slightly in advance of cost, rather than below it.

TWO METHODS OF FIGURING PROFITS.

It is a very difficult matter, unless a business has been running for a few years, to arrive at a fixed percentage to add to cost which will yield a fair profit after the goods are sold. Usually selling prices are based on percentage varying from 25 per cent., 30 per cent., 33 1-3 per cent., 40 per cent., 45 per cent. to 50 per cent. and up, according to the class of goods. We will compare two cases, which differ considerably as to running expenses, although the sales are the same, and it will be seen why it is necessary to get slightly higher prices, according to the district in which the business is located.

We assume, for the purpose of illustration, that the stock of goods on hand at commencement of operations and at the close amounts to the same.

Fig. 1.

Dr.		Per cent.
Purchases	$42,000	0.70
Salaries	7,500	12.5
Rent and taxes	1,500	2.5
Insurance, light, heat, etc.	900	1.5
Stationery and postage	250	.43
Interest and discount	600	1.00
Freight and express	350	.58
General expense	2,000	3.33
Advertising and catalogue	400	.66
Net Profit	4,500	7.5
	$60,000	100
Cr.		
Sales		$60,000

Fig. 2.

Dr.		Per cent.
Purchases	$42,000	0.70
Salaries	8,500	14.16
Rent and taxes	2,000	3,33
Insurance, light, heat, etc.	900	1.5
Stationery	300	.5
Interest and discount	750	1.25
Freight and express	700	1.16
General expense	2,500	4.17
Advertising	450	.75
Net Profit	1,900	3.18
	$60,000	100
Cr.		
Sales		$60,000

The above percentages are figured on the sales thus : The purchases, $42,000, are 70 per cent. of the sales.

It will be noticed that if the percentages (about 43 per cent.) added to the cost for selling price in Fig. 1 were also added as a basis in Fig. 2, the net profit, on account of the additional expenses, would be considerably reduced, and it would be necessary to advance a higher percentage to maintain a fair average profit (about 49 per cent.).

Owing to the increased expenses, naturally a higher price should be received for the goods, but notice that the difference in the total percentage added for profit is only about 6 per cent. increase.

An article costing $1 would sell in the first store for $1.45, and in the second for $1.55, an increase of 10 cents per article, yard, etc., as the case may be. An article costing, say, $10, would sell in the first store for $14,30, and in the second for $15.

It is only fair to the customer and consumer that a fair, systematic method be employed to arrive at a reasonable selling price, and the best method is to collect all the expense accounts at the end of the year and figure the percentage of each to the whole. If any particular account appears out of proportion it can then be analyzed and certain expenses cut down, or, if this is not possible, an additional percentage will have to be added to the cost price.

In figuring selling prices a number of merchants add a certain percentage for freight, for general expense, etc., and then the profit desired. This is a good plan, but you should figure on the results obtained, by actual experience, in the totals of these respective accounts, at the end of a period. Allowance is made, too, for bad debts, contingencies, etc., and this may be added in with the general expense.

ON REFUNDING MONEY.

In nine cases out of ten it will pay a merchant to refund money or exchange goods without argument, even if he feels sometimes that he is being imposed upon. The public at large is pretty fair-minded and there are very few people who will wilfully practise an imposition upon a merchant. When the merchant is in doubt as to whether he will yield a point to a customer, he should look at the matter in an entirely impersonal light. Consider just how much the customer's trade is worth in a year,-rather than the amount involved in the transaction in question. In most cases it will pay to yield. It usually makes a good customer. If goods are to be returned give the money back cheerfully and do not ask questions until the customer has the money in his hands.

Don't expose your ignorance by hoarding your knowledge. It is selfish. There is no success in it.

Modern Hardware Merchandising

Founding a Retail Business—Business Competitors Should Fraternize—Competition of Syndicate Stores—Shortages in Shipments Prevented—Aim of Trade Associations.

Founding a Retail Hardware Business

K. A. Cameron Gives Some Practical Suggestions for the Man Who Intends Establishing a Hardware Store.

Let us choose the Canadian Northwest as a field for selecting a desirable location for a hardware business that is to be capitalized at, say, $5,000. Naturally we look for a town along the line of the C.P.R., the C.N.R. or some other railroad. Many places at first glance appear very desirable, but on looking further, we find that they are without some important natural facility that precludes the probability of their becoming a centre of any account. One is far from any lake or river, another is located in a very rocky or hilly country, still another is booming at present, but the boom is artificial and it has no real resources of consequence. We must be careful, too, not to choose a town that is closely surrounded by others already well endowed in the way of hardware stores, for this is found to cut down our field of business and our capital is not large enough to allow of competing from the beginning with well established firms.

After carefully weighing its advantages and disadvantages we have at length chosen a town on an important branch of a railroad and between its main line and the main line of another road. It has a population of 2,000 and a fairly large river drains the surplus water from a fertile country in which farming is the logical industry. A good grist mill, a grain elevator, first-class hotel accommodation, well laid out streets and a growing business section give evidence of sound prosperity. We have made arrangements for the lease of a store, located near the centre of the town and it answers our requirements splendidly. It is a modest two-storey brick building a few feet from the street front to allow of outside display, and has a flush entrance with plenty of window space. Note that the upper floor will be useful for storing bulky goods, reserve stock or goods that are not seasonable.

We are now ready to place our first order and must be especially alert in doing so. Many business men carry for years goods that they have thoughtlessly ordered with their first shipment. These first dealings particularly, must be with a trusty house, in whom one has every confidence. Before starting with the order it is well to prepare as complete a list as possible showing the range of goods to be purchased and approximately the amount set aside for each class, otherwise our stock is apt to be "lop-sided," for example a fine assortment of cutlery but a poor showing in mechanics tools. The representative of the wholesale firm will be able to inform us as to the advisability of ordering certain lines for this locality also as to the sizes, etc., called for, in some goods on which we are not well posted. As most of our trade will be with farmers our stock must be suitable for their wants. Agricultural carpentering tools must be carefully selected and this item will call for an outlay of about $300, including such lines as saws of all kinds, files, hammers, axes, chisels, screwdrivers, wrenches, braces, squares, the many kinds of bits and augers, vises, etc. A better class of tools (smaller quantities) will be required for the regular carpenter trade and $250 can be wisely spent here. A small stock of machinists' supplies, say about $100, can be readily turned over (order a few staple sizes of reamers, taps, dies, pipe wrenches, etc.), blacksmiths' supplies, such as shoes, iron, nails, nippers and rasps to the extent of $150, should be in good demand.

Builders' general hardware will need a lot of care in sorting and in a growing country it will mean a steady source of profit. Buy plenty of common, serviceable locks, knobs, latches, locks sets, hinges, etc., together with a limited quantity of better grade goods. This corner of our store will take fully $200, and in the store house we have room for $300 worth of wire nails, principally in the best selling sizes, and $150 in building and roofing papers. A fair stock of rope will cost $75, while fencing wire, poultry netting and chain will mean $300.

In the basement, linseed oil, turpentine, machine oil, cylinder oil, bulk varnishes, etc., will require an outlay of about $150. Prepared paints, dry colors, and such goods call for about $200.

Harvest tools will be one of our strong lines, together with spades, shovels, picks, handles, etc., and a good assortment can be had for $200.

Miscellaneous hardware includes a great variety of goods that cannot be given in detail here, but the range includes: Harness hardware, cow ties, chains, padlocks, cabinet locks, brass goods, pulleys, pipe fittings, carriage and wagon trim, whips, salt, brushes and the thousand and one other incidentals, from needles to jack screws. It is hard to say just what amount should cover this line but it is not likely to be less than $350.

Cooking and heating stoves may be safely indulged in to the amount of $300 or so, but with a small capital this is a line in which a great deal of money

How to Divide Capital.

Assuming that a man has $5,000 to invest in a retail hardware store, Mr. Cameron, under the conditions outlined in the accompanying article, would apportion his investment as follows:

Tools for farm use	$300
Mechanics' tools	250
Machinists' supplies	100
Blacksmiths' supplies	150
Builders' hardware	200
Wire nails	300
Building and roofing papers	150
Rope and cordage	75
Chain, wire fencing, netting, etc.	300
Oils, etc., in bulk	150
Prepared paints, etc	200
Harvest tools, etc.	200
Miscellaneous hardware	350
Cooking and heating stoves	300
House furnishings	200
Cutlery, etc.	200
Sporting goods	100
Total	$3,525

Leaving a balance of about $1,500 for fixtures, current expenses and working capital to meet other incidental expenditures.

can be unnecessarily tied up, as sales are often made on credit. In buying do not overlook the class of fuel principally used in the district.

Tin and enamelled ware and other household furnishings yield a good profit and should be selected with a view to having a bright, up-to-date stock. Churns, washing machines, wringers etc., are also ready sellers. Do not begrudge a couple of hundred dollars here.

Cutlery is a most important line, but as it is more or less a luxury, it is advisable not to order too heavily at the start. Later on we will know what our trade needs in this respect and can increase our stock accordingly. For the opening order we will content ourselves with about $200, including pocket, table, kitchen, butchers' and furriers' knives, scissors, razors and carvers.

Sporting goods to suit the locality and season are almost always good sellers and a prominent place can be profitably given to this branch. For $100 or so a nice line may be started.

We have endeavored to get a complete stock of all hardware that will be in reasonable demand, but have also been careful not to work too close to the edge of our capital; the balance will be needed for such expenses as freight, wages and living expenses, and also for further purchases necessary before the business has progressed very far.

With our opening order now placed we can commence to get things in shape for business. Fixtures will have to be bought and placed; lighting, heating and insurance provided for and the general lay-out of the store arranged. When these details are completed we are ready for our car of goods—and then "GET BUSY."

Modern Ideas in Contrast to Old

The Hardware Dealers' Magazine Tells a Story of How a Young Merchant Located in a Town and by Friendly Acts Brought His Competitors Together Into a Local Association.

Phineas J. Stedman had received his business education under the auspices of a Philadelphia hardware firm, and in consequence had learned the most excellent adage that molasses catches more flies than vinegar ; that politeness, cordiality and good esteem toward one's competitors are better than back-biting and throwing brickbats through the front window, and that the best way to get along with one's fellow men is to treat them as fellow men. In other words, he had taken in, from his office boy youth, the milk of brotherly love for which the Quaker City is famous. It was only when he ran up against the cold world of the outside that he discovered how cold it really was. Hence this narration.

An Inspiration Arrives.

On his twenty-seventh birthday this young and well-disposed Mr. Stedman had an inspiration. "My boy," he said to himself, "you have six thousand dollars tucked away in the savings bank. Why not get out and hustle for yourself ?" He hastened home to break the astounding idea to his wife. All the answer he received was, "I've been wondering about that for the past two years."

"But you don't know what I mean !" he gasped. "It is to go in business for myself."

' Of course," was the placid answer.

"Not in Philadelphia," he continued, "but in some much smaller town. To move away from here, for good. What do you think of that ?"

"We would take the baby and the household goods," she answered. "So what does it matter ?" He sat down to think it over. Women are so unexpected, you know.

Start a New Store.

Mr. Stedman began to make inquiries and look around. It was a slow and vexing process. So much depended that he did not wish to make a mistake by rashness. He looked over at least forty established places ; was offered so many "bargains" that he became suspicious of them all. Finally, he came to one set resolution : "If I begin, it will be from the ground up. No second-hand junk shop for me. I'll start with a new store, a new stock, a new name, and, so far as goodwill is concerned, I believe I would rather create that than buy it."

He finally started. The town of Mesopotamia, Pa., had a large and growing population, was becoming a railroad centre, and offered a future. "Of those three stores," he said, "I am only afraid of one. The other two I can get away with." This was the Philadelphia modesty taking flight ; with the growth of his courage, self-confidence had been born. "The two are old fogies," he added, "but don't ever repeat that. It would hurt us from the start."

We will skip the purchase of an almost new building ; the removal, the fitting up, the buying of goods, the opening ; they come with every venture of that sort. His cash was judiciously invested ; his credit was good from the start ; his expectations were modest, and he was willing to work like a dray-horse. Then he began what his friends ' back home" declared was to be a successful career.

This chronicle has little to do with the business developments of Phineas J. Stedman, except in one respect. That was his relations with the other merchants of his line, the live man and the two "old fogies," of whom he was not afraid.

Mr. Stedman had not contemplated the new sign over his new door for more than two weeks when he began to wonder why the other hardwaremen of the town had not given him a formal call of welcome. This was the custom in the places with which he was best acquainted, especially since the organization of the Retail Hardware Associations. It might be war to the knife in a business way, but why should that prevent pleasant and courteous social relations ?

Makes Calls on Competitors.

He waited another week and then said to himself : "I will show them how it ought to be done ; that I harbor no ill-will because they have been here longer than I have." He put on his hat and made three calls.

His first call was to J. Robinson & Son, the oldest establishment in the place. J. Robinson had been dead some thirty-five years, and the son himself was an old man. When Stedman held out his hand and said, "I am Mr. Stedman, of the new little store down on Market street," the old man looked older than he was ; but he looked no more surprised and disgruntled than he felt, He managed to say, "I am glad to see you," but inwardly his comment was "I call this gall. I wonder what he is trying to work me for ?"

The call was brief at the store of T. Enos & Co. Mr. Enos proved himself a suave, diplomatic man, who could be as smooth as a poker chip and as cold as an ice cake. His greeting was most polite but frigid. He was glad to see Mr. Stedman. He hoped he would succeed. Yes, business was rather good. "You see," said Mr. Enos, "that we carry the best stock in town, and pride ourselves on the quality of our trade. It is a trade that one can hold by the right treatment, you see."

"That's true. I congratulate you," said Mr. Stedman, heartily.

"Doing anything yet ?" asked Mr. Enos, loftily.

"A little," said Mr. Stedman. "I ran up to Philadelphia a couple of days ago, and took a three-thousand order for the new railroad shops."

"Indeed !" said Mr. Enos, a little less lofty. "I looked the matter over, but

did not care to bid." The fact was that he had no idea that such an amount of business would be doing for the shops for six months at least. He looked at Mr. Stedman. He seemed to have grown taller in the last two minutes.

The Smith Hardware Co., in the person of Thomas T. Smith, was cordial, encouraging and genial. The junior of the firm, Mr. Savage, was reserved. Mr. Savage plainly remarked that he did not believe Mesopotamia needed another store, and that Mr. Stedman would have done better if he had stuck to Philadelphia.

"A number of my best friends feel in the same way," Stedman responded, diplomatically.

Uses the Currycomb.

The young merchant went home and sat down to consider it. "Snubbed all around," he said. "Sat down on by the whole crowd except Smith. But I've met all their sort a dozen times before. That's what one learns by five years on the road—to go into the stalls of just such biters and kickers and curry them down until they will stand without being hitched." In less than a week he had a chance to make good use of his currycomb.

A man from Scranton came over to Mesopotamia, under contract to erect a large block for store purposes, with an opera house above, on the principal thoroughfare of the town. Smith, Enos and Robinson pricked up their ears when they heard of it ; they were so ready to welcome this new man with a large buying capacity, that he could have had anything in their stores, on any decent terms he would offer. All except Stedman. He knew all about this man from Scranton ; how he moved from place to place, sticking somebody in every one of them ; how he was execution-proof, and how a number of confiding merchants were still whistling for their money.

He sat down and wrote three letters one to J. Robinson & Son, one to the store of T. Enos & Co. and one to the Smith Hardware Co. All were identical :

"Dear Sirs,—I feel it but proper and neighborly on my part to put you on your guard against John Blank, who has the contract for the opera house block, and, in doing so, I am only doing as I am sure you would do by me. He is utterly untrustworthy, and all dealings with him should be for cash." He then proceeded to record the career of the man for the past half-dozen years.

When Mr. Robinson read his note, he looked at it with amazed surprise. "I wonder," he said to himself, "what this cheeky cuss is trying to work me for." He did not answer the letter, but set some inquiries on foot, and the result was that John Blank got no credit at that store.

Mr. Enos acknowledged the letter with a formal two lines. Mr. Smith went further ; he called on Stedman and thanked him in person.

The result was that Blank bought a few goods in Mesopotamia and paid for them. He purchased the rest in Philadelphia and the accounts are still on the books. And Stedman arose in the opinion of his competitors.

Three months later he added another service of a similar nature. He knew a way to force immediate payment from a doubtful party. He let the others in, and when the man failed, six months later, no hardware store figured in the list of losses.

Opposition Makes Advances.

Some days later the head of the Smith Hardware Co. called on Mr. Stedman.

"You seem to be a decent sort of a fellow, my boy," he said, "and I don't think we have treated you right. You did us all a good turn the other day. Have the other fellows acknowledged it ?"

"Just a line from Mr. Robinson and a word on the telephone from Mr. Enos."

"Well, you see, I have brought my thanks in person. The trouble with Robinson is that he is so narrow-minded and suspicious, that he is always afraid some one is going to do him up. If you look into his store window as ypu go by he suspects you are trying to steal a grindstone. Enos is so stuck on himself and his store that he can't see any one else, or imagine that any one else is doing business. But they are good fellows at heart ; sound, honest and staunch to their friends. I wish we could all get a little better acquainted."

"I have often thought," said Mr. Stedman, "that I would like to know you all better. I wonder if we couldn't manage a mutual blow-out of some sort ? I would like to give you all a dinner, but it would look like cheek coming from me."

"That's so," said Smith. "They would think you were rushing things too fast for a newcomer."

Then, after a moment's thought, he enunciated a sudden resolve : "But, what's to hinder my doing it, and by gosh ! I will !"

Mr. Robinson and Mr. Enos were surprised a little later at receiving an invitation to dinner, as the guests of Mr. Smith at the Mesopotamia Hotel. Mr. Enos wondered what it might mean, but accepted. Mr. Robinson asked himself : "Is old Smith up to any new games at someone else's cost at this late day ?" But, curiosity, respect for a neighbor, and a rather dormant love for good-feeding, caused him also to accept.

"It's all right," said Smith to Stedman, over the telephone. "Be on hand Thursday night, and you'll find that we are not so bad a lot of polar bears as we have been made out to be."

There were no drinks at that table, except cold water, coffee and Jericho cider. The last-named looks like champagne, bubbles like champagne, smells like champagne, and, to the crude taste of a man who has not dallied much with champagne, tastes like it ; with possibly the same effects.

Fraternal Feeling Developed.

Whatever the cause, the three hardwaremen, who had for years done business in the same town, and who had known each other as rivals, but never before put their feet under the same table ; the three men who had been suspicious of every move made by the others, thawed out under the influence of the food, the coffee, the cider, and the diplomatic and cordial manner of the young man from Philadelphia. They discussed business, told stories, joked each other's business methods, and above all, made discoveries—discoveries as to good qualities and the possibility of cordial relations never before suspected. The foundations for much mutual helpfulness were laid there and then. The climax came when the once-crabbed old Robinson arose and proposed a toast:

"Here's to the young man from Philadelphia ! I will frankly say, gentlemen, that I did not welcome him. We did not want him, and I don't know as we needed him. We got along for quite a number of years without him. But here he is, and he looks like that sort of a fellow who has made up his mind to stay. Well, as we must put up with him, let's treat him white, and get out of him all the good we can. He has done me favors, and when he did them I wondered what he was after. He has to-night told us what he is after, and I take him at his word. He wants to help us so that we will help him. He wants to aid us in building up this town ; it needs building up badly enough, in several directions. He wants to show us that business rivals can be friends. Says they do that in other places. I for one am willing to try it. How about you fellows ?"

"We're with you," came an answering shout, at which the landlord showed an anxious face at the door, and looked at the clock.

COMPETITION OF 15-CENT STORES.

The establishment of 5, 10 and 15-cent stores in dozens of towns and cities throughout Canada is a form of competition being felt by many hardwaremen. In many cases the goods sold are second quality, but the public does not

understand this and when they are asked for higher prices for similar articles at the hardware store they feel that they are being imposed upon. The "syndicate" store gets a reputation for cheapness and the housewife gets into the habit of looking to it for small housefurnishings.

To combat this competition many hardwaremen have been led to establish similar stores or departments of their own. A better plan is to start a "Dollar Limit Department." The profit on the 5 and 10-cent goods is usually small and considering that the store or department must be in a valuable location the rental value of which is very high, the confining of the department to the low-priced lines is a serious handicap. The "Dollar Limit" plan enables the merchant to sell articles for five and ten cents at cost, plus about 20 per cent., so that he can break even on such goods. He may even sell some such articles for four and nine cents, or below cost, in order to stimulate trade, and make up his losses on that end of his goods at 39, 49, 69, 89 and 99 cents. Buyers can get any quantity of goods that look high-class, appeal to bargain hunters, and create an immense demand, and yet will stand figures which represent a good profit. The hardware store can put more value into a "Dollar Limit Department" than the 5 and 10-cent stores can, and people will place more confidence in its goods.

The 5 and 10-cent store is only possible when there are no incidental expenses in addition to the selling, such as advertising, deliveries and all that. The average store cannot afford to carry five and ten-cent goods, because they have to deliver such goods, and advertise them. Suppose that every customer bought a ten-cent article. A hundred articles would bring in ten dollars, and to make as many sales as this, several clerks would be necessary. These same six clerks could sell more expensive goods with the same amount of effort, and earn greater profits, so that there is no inducement for a store to carry the cheap lines exclusively.

Checking the Packing of Goods Shipped

The Van Camp Hardware & Iron Company, Indianapolis, employ an original method for checking the contents of packages of cutlery, revolvers and other goods that run into money, to prevent loss or theft and facilitate the adjustment of claims for shortage. The lines referred to are well-known as being especially liable to trouble of this kind. In accordance with the company's system all packages containing

IMPORTANT
EXAMINE SEALS and WEIGH PACKAGES
Your Wrapped Goods from SPORTING GOODS DEPT., are contained in_____ Packages. The TOTAL weight is_____ lbs.____ oz.
These Goods have been DOUBLE CHECKED and Weighed twice.
VAN CAMP H'DW'E & IRON CO.

Fig. 1—Paster Used on Packages.

such goods are double checked and weighed twice, being then marked with the paster shown in Fig. 1. On this are blanks in which to enter the number of packages from the given department which the shipment contains, together with the weight in pounds and ounces. No attempt is made to keep track of what portion of the department goods are wrapped in the different packages. If all items may be wrapped in one package that is done; otherwise items are separated to make bundles of convenient size.

Finally packages are effectually sealed as indicated in Fig. 2, the seals themselves being narrow paper slips about 7 inches long and 1-inch wide. Obviously, the seals afford conclusive evidence as to whether or not a package has been tampered with, while in the majority of cases any argument with a clerk at one end or the customer at the other as to what goods a package contained may be settled almost conclusively by an appeal to the scales.

Fig. 2.—Sealed Package.

The Workings of the System.

On a certain occasion a customer of the company reported a shortage of one dozen triple plated tea spoons and one dozen triple plated table spoons. His original order was at once taken from the files and duplicated from the cutlery department. It was then placed on the scales and the weight proved to be over the recorded weight of the package sent him, exactly the weight of the two dozen spoons. The company, therefore, felt perfectly satisfied to allow the claim without further question.

The system came to be installed as a result of an incident of this kind. Some time ago a customer wrote in that his invoice calling for three revolvers checked one empty revolver box. Naturally the clerk who filled the order was satisfied in his own mind that the boxes were full when they left the sporting goods department. He said he would certainly have noticed the difference in weight between an empty box and one containing the arms. Although this sounded reasonable, it was not positive, and the company at once figured out that if it knew the weight of the package when it left the sporting goods department it could be positive whether the revolvers really went in the box. From this starting point the system was worked up as it is in use to-day.

Aside from the value of the system in adjusting such matters as have been instanced, it also has an excellent moral effect, both on clerks and customers. Certainly it would tend to deter a dishonest customer from making an unjust claim if he realized that the company knew the exact weight of the goods when shipping them.

TREAT TRAVELERS DECENTLY.

The buyer who barricades himself behind innumerable doors and makes himself as inaccessible as possible to the end that he may not waste his time upon the unworthy drummer does so at the expense of his own firm. Actual indifference to the traveling salesman has long since been demonstrated to be a losing game. It may contribute to the buyer's sense of personal greatness, but as a rule this exists only in his imagination.

Your competitor who gives the drummer the attention he deserves puts himself in touch with the large affairs of the outside world calculated to affect his own business, and is only too glad to see you play the clam.

MARKING THE GOODS.

Many prospective sales have been lost through goods not being plainly priced. A great number of persons are adverse to inquiring prices unless they really intend purchasing on the spot. Something in the shop will attract their attention, but rather than ask they will go away wondering what the cost is. If two windows were filled with similar goods, those in one window being plainly ticketed and in the other not, there is no doubt which window would command the most business.

Aim of Trade Associations

M L. Corey, Secretary of the National Retail Hardware Association Outlines the Part Which Organizations of Retail Dealers Play in Modern Business.

Progress and change are the order of the day, but how many business men have sought to discover and influence the motive power that governs their tendency and direction? Retail merchants long pursued a policy of drifting with the tide, cherishing a hope that the people who manage things would not do anything that would embarrass or endanger their mercantile interests. What was the result? For years our business has been located on shifting sands and we are continually engaged in a strenuous endeavor to adjust ourselves to new conditions. We would watch our competitor across the street with a vigilant eye and if, perchance, we could cripple or kill him we were self satisfied. We sank deeper and deeper into the narrow confines of our little business shell, unheeding the combination of forces and influences that were taking advantage of our individual weaknesses. We might rebel, but a protest here and there made no impression.

It was a knowledge of the facts—the trend of events in our business world—that moved thirteen hardwaremen to hold a conference and talk matters over, and from this first meeting in Ohio sprung our Retail Hardware Associations. About the year 1900 other states began to waken up in earnest and while new states were organized all the old associations grew until to-day several have nearly as many members as all combined in 1900. It was only natural that a central or national body should result, as it was early recognized that the evils that threatened were general enemies. Our association has always chosen conservative, level-headed leaders and this has made possible our present development. This progress has brought its responsibilities; all our experiences and business judgment is needed in deciding our future course and policies. Habits creep steadily upon individuals until they awaken to find their power and manhood shattered. So it is with society, with business, with the nation. The merchants in 10,000 towns and cities are fighting a monster system that can only exist through unfair price privileges and trade demoralization. Society stands aghast at the evidence of disreputable stock manipulations and political and official dishonesties, yet this condition has grown slowly and gradually upon us. We all know that in the early days of any movement, evil or injurious tendencies are most easily influenced or overcome.

Indifference Spells Ruin.

The best time to change or defeat proposed legislation is while it is yet in the committee's hands; catalogue houses could never have become such dangerous enemies had we organized and unitedly opposed them ten years ago. Is it not wise, is it not our duty to look forward, to analyze the trend of policies and methods before they become established and reach such magnitude that we are bound and helpless and can only accept the condition and the injury? We might just as well admit that our association's effort is directed toward self protection or selfish advantage. This does not mean that other interests are always antagonistic, but that our first concern is to look out for ourselves. We may as well regard with suspicion any expression that differs from this view. The manufacturers and jobbers have their problems to solve which they settle between themselves, but these arrangements often name conditions, prices and terms for us which we are expected to accept without voice or investigation. The jobber is willing to have his profits protected by any system of rebates and restrictions that compels a uniform selling price to the retail trade; if under this system the manufacturer is allowed to sell the catalogue house at less than we can buy of the jobber then we are not receiving fair treatment or consideration,

The running expenses of retail stores have increased materially within the last few years. There are many jobbers and traveling men whose expenses and profit must be added to the goods we buy. There is an over canvass of the retail field which is continually building up and encouraging new competition. Manufacturers have cut off some of the buying advantages our larger retailers enjoyed; catalogue houses are still extended special privileges to a limited extent. We believe there is a small increase in the number of goods being sold "direct to the consumer" by manufacturers. That there is a combined effort being made to convert the consumer into mail order buyers. That this includes the undermining of the retailer's position and influence. That injurious legislation must be more carefully watched and intelligently opposed.

MAIL ORDER COMPETITION.

"I wonder how many retailers read mail order catalogues when buying their goods," said President S. R. Miles, of the National United States Retail Hardware Association, when addressing the convention of the New York State Retail Hardware Association last month. Only a few hands went up in response to his query, so he proceeded to point out reasons why every hardwareman should be conversant with the mail order catalogues, and in cases where it is necessary to buy the same line of goods as catalogued by the mail order house, to insist that the salesman sell at a low enough price to allow the country or town merchant to sell at a profit at the same figure quoted by the catalogue house. Such action, when backed up with a definite refusal to buy under other conditions would soon force jobbers and manufacturers playing two ends of the string to discontinue selling to either mail order houses or retail dealers.

It is perfectly proper for retailers to oppose in every legitimate manner the encroachments of the mail order concerns, whose every thought is profit—with no concern for the welfare of the country or any of its institutions. If the mail order magnates had their way there would be c.o.d. parcels post and a rural mail delivery, every postmaster being an agent and every mail carrier a delivery boy for the big city stores. This system of merchandizing may be the cheapest for farmers from a buyer's standpoint, but farmers must sell and they must live and have some joy in living. Can they sell best to the mail order house or to the people in the nearby towns? And can they live a joyful life surrounded by deserted villages. With the country merchants forced out of business, will there be schools and churches, entertainments and holiday celebrations for the farmers to attend? And will there be any country newspaper with no merchants to advertise? If the deserted village appears, will it not be followed by the deserted farm?

Not a Natural Growth.

If it can be shown that it is necessary for country buyers to do business through catalogues it will be futile to oppose the development of the mail order business, but it seems clear that the catalogue house is an abnormal, rather than a normal growth. They came into existence following the panic of 1893, taking advantage of the overstocked warehouses, buying up the goods at sacrifice prices and gaining a foothold with bargain hunting buyers. The mail order method is not a natural plan for the distribution of merchandise, as the buyer pays his money without seeing the goods and the door is open for fraud. The mail order system secured its tremendous volume during the past fifteen years because of the antiquated business methods of many retailers. There has been a reason for its

development and if that reason is removed the mail order trade must decrease in volume, rather than continue to increase.

The organization of retail associations during the past few years is providing the means for the removal of the reason for existence of the catalogue house. The retail associations are educating their members to more intelligent methods of doing business, helping them to successfully combat mail order advertising and undersell the mail order houses, while also preventing the securing of special legislation injurious to the retailer. If the retail organizations avoid attempting to establish long lists of prices (which cannot be maintained if unfair) and continues to encourage a better feeling between competitors there is no reason why an intelligent effort cannot be made to retain the hardware trade in its legitimate channel, and the hardwareman in doing this is performing a service to the general public in his district as well as to himself.

The trade press is another strong factor to be reckoned with in combatting mail order competition. Independent of the lavish advertising expenditures of the catalogue houses the trade newspaper can co-operate with the retail associations in preventing the destruction of the small towns and villages in order to build up the fortunes of the mail order magnates in the big cities. The country editor, too, can be called upon to do his part—and he will willingly do it if the necessity of his action is impressed upon him by the progressive-minded business men who are helping him to build up the home town.

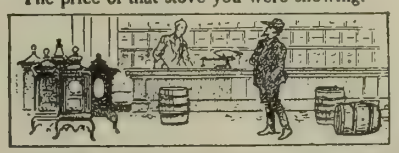
"A DESERTED VILLAGE."

The "Iron Age," 14-16 Park Place, New York, has issued in small pamphlet and leaflet forms reproductions of the accompanying article, entitled, "A Deserted Village." Retailers who wish to secure a few hundred for distribution to the names on their mailing list can do so at the nominal price (duty extra) of 15c per 100 for the leaflets, and 40c per 100 for the pamphlet. Or if any retailers desire to have the article reproduced in their local papers an electrotype can be secured for $1.25 from the secretary of the Ontario Retail Hardware Association, 10 Front street east, Toronto. The local editor will gladly give space free if the engraving is supplied him, while the cut can be used afterwards on other printed matter.

Loyalty is one of the greatest assets a man can possess. The merchant looks with a kindly eye toward the future for the chap who works for the store's success.

Tom Plowman lived on a section farm
Not far from a prosperous village;
He worked late and early and calloused his palm,
But thrived by industrious tillage.

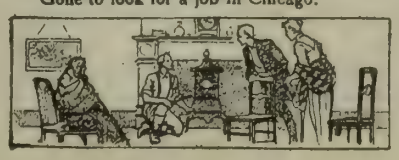
He saved up some money and stood very well,
His luck would have lasted for all we can tell
If he never had heard of Chicago.



One day a big catalogue came through the mail
That told of a wonderful heater;
The figures were tempting, Tom swallowed the tale.
Says he, "Mr. Merchant's a cheater.

His profit must be near a hundred per cent.,
I'll just call his bluff and unless he'll relent
I'll order a stove from Chicago."

So he drove to the village and entered the store
With an air that was lofty and knowing.
Says he, "Mr. Merchant, please tell me once more
The price of that stove you were showing."



"Thirty-five, cash or credit, the best one in town."
Tom turned on his heel and went out with a frown,
And sent off a check to Chicago.

He bragged to his neighbors and they in a trice
Sent away for whatever they needed;
They often were stuck, but they got a low price,
Which, of course, was the one thing they heeded.

The merchant soon failed and sold out his store,
And this was the notice he left on his door:
"Gone to look for a job in Chicago."

Tom's mail order stove didn't work very long,
But no one in town could repair it;
At last he was forced to admit he was wrong,
His neighbors weren't slow to declare it.

With no stores there was no one to buy or to sell,
The drummers stopped coming, they closed the hotel,
'Twas surprising how quickly the town went to—well
A very long way from Chicago.

The lawyer, the doctor, the editor, too,
They all got cold feet very quickly;
The parson soon noticed the way the wind blew,
He left, for his children were sickly.

At last Tom decided to sell his old farm,
But no one, he found with the greatest alarm.
Would buy one so far from Chicago
When blank desolation stared Tom in the face

His courage grew weaker and weaker,
Till he made up his mind to get out of the place
And go on a jaunt as home seeker.
So he put on his overcoat, packed up his grip,
Says he, "I'll be giving my neighbors the slip,
For I must be off to Chicago."

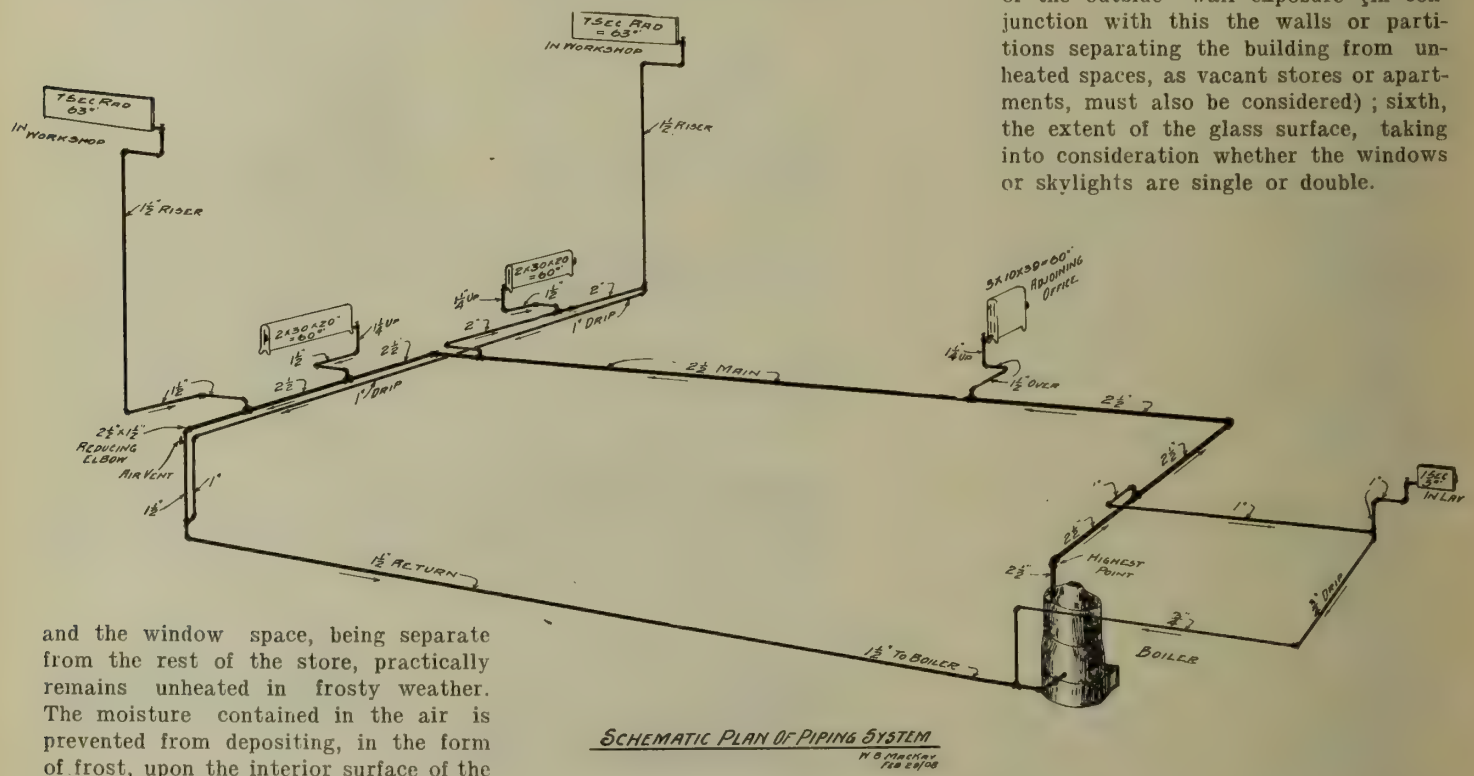
When he got to the station to Tom's great surprise
He found it deserted and dusty,
Inhabited only by spiders and flies,
And the siding was crooked and rusty.

The trains flew by whizzing, Tom waited in vain,—
Says he "Neither merchant nor doctor nor train
Will stop any place but Chicago."

Heating a Hardware Store

W. B. Mackay Describes a Steam Heating System in a Western Ontario Hardware Store and Argues That it Was the Best for the Purpose.

The plans accompanying this article are of a western Ontario hardware store, the middle one of a block of three situated on the north side of the street facing to the south, with a lane to the rear leaving the north side exposed.



The building is of brick construction, two storeys high, with a flat roof, and has a good basement under the main store. A study of the plans will show the layout of each floor. Some features about the building, while not connected directly with the question of the heating, will prove of interest to all.

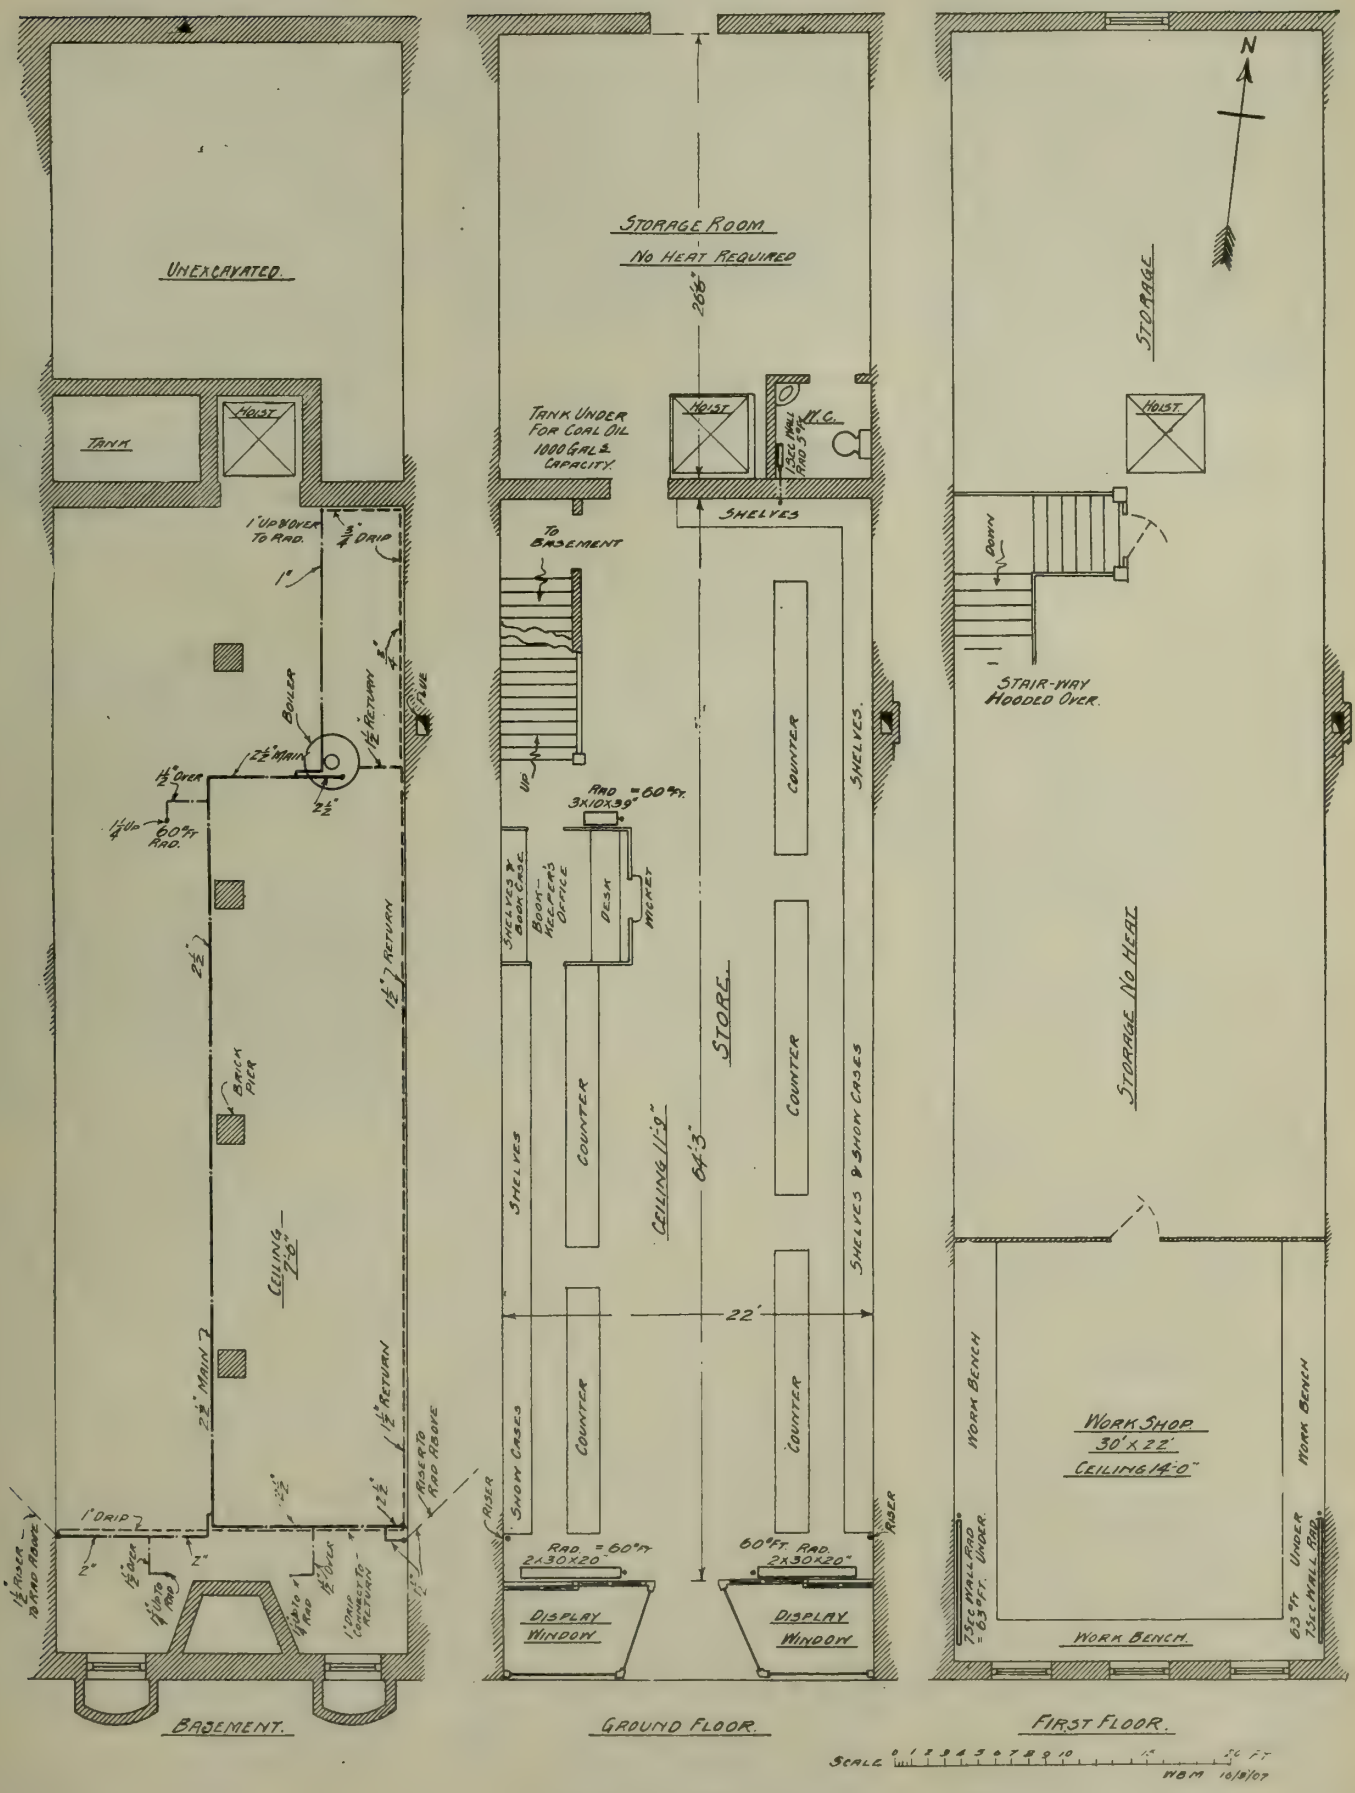
The display windows are entirely closed off by tight-fitting sliding glass doors and the window space, being separate from the rest of the store, practically remains unheated in frosty weather. The moisture contained in the air is prevented from depositing, in the form of frost, upon the interior surface of the exposed glass, the temperatures on either side of the exposed glass not varying enough to cause the deposition.

The hoist shown on the plan is another accessory of great value, as heavy hardware can be effectually handled from the basement to the storage room above on the first floor. A coal oil tank is built of concrete in a pit alongside the excavation necessary for the hoist and is entirely below the level of the ground floor line out of the way. The barrels of oil are received and immediately emptied into this tank, thereby preventing any leakage or evaporation, This arrangement gets rid of the barrels which usually take up valuable floor space. This tank is equipped with a self-measuring pumping apparatus to raise the oil when required.

The Heating System.

From the general arrangement of this store, either steam or hot water are the best methods of heating applicable to this particular case, and in this instance steam was chosen by the owner, as the building is used entirely for mercantile purposes and no goods are carried in stock that would be endangered from damage by freezing during any short interval of non-heating.

Schematic Plan Of Piping System
W. B. Mackay Feb 28/08



This building is 95 feet long by 22 feet wide by 11 feet 9-inch ceiling on the ground floor and 14-foot ceiling on the first floor. To heat this store a boiler having a 25-inch grate and a gross ratio capacity of 500 square feet was chosen, together with 300 square feet of direct radiation, divided into six radiators of the various heights and styles as located on the plans, the idea being that the store proper and the workshop over the front of the store, are to be heated to 65 degrees when the thermometer stands at 10 degrees below zero, the other portions of this store requiring no heat.

In determining the amount of radiation required, to heat a room or apartment, under certain conditions, which are set for us, the following must have proper consideration: First, the construction of the building, whether good, bad, or indifferent; second, the temperature required when the weather conditions are such that artificial heating is necessary; third, the exposure of the building, whether it is well protected or fully exposed; fourth, the cubic contents of the building, as also the number of times the air is changed according to the use for which the building is intended; fifth, the extent and nature of the outside wall exposure (in conjunction with this the walls or partitions separating the building from unheated spaces, as vacant stores or apartments, must also be considered); sixth, the extent of the glass surface, taking into consideration whether the windows or skylights are single or double.

Frequently these factors do not receive proper consideration and the heating plant is not as successful as it otherwise would be.

Determining the Radiation.

In the store proper the entire front is practically all glass, measuring 22x 11 feet, amounting to 242 square feet of glass surface. The only exposed wall surface of this store being the wall between the store and the storage room at the rear, and this being a protected wall, the exposure was taken at 50 per cent. of the full area of that end. The

Heating a Hardware Store.

side walls are party walls and were taken as warm walls. The amount of radiation required to maintain the cubic contents of the store alone at a proper temperature was also a consideration.

The avoidance of any complicated algebraical formulea will simplify the discussion, and when the use of such formulae is involved the result of the calculation only need be used. So in totalling the glass surface, the exposed wall surface and the cubic contents, and applying the proper factors to be used in conjunction with them the result amounted to 160 square feet of radiation for 65 degrees at 10 degrees below zero.

Nothing was added for the direction of the front exposure, the store facing south and that being the direction for which all formulae are figured. The storage room overhead, being unheated, has a cooling effect on the store, and to offset this 10 per cent. was added, making the amount of radiation necessary about 180 square feet.

The 160 square feet of radiation would heat this store to 65 degrees at zero outside, and taking into consideration the small exposure and the location and assuming the building to be of the best construction, this last statement could be set down as the minimum amount of radiation required to heat a store of this kind at zero temperature outside. Resolving this into terms of the cubic contents, it assumes one square foot for every 100 cubic feet of contents. The ratio used in the case of the store, including the addition for the cold room above, amounts to one square foot for every 90 cubic feet of contents.

As the minimum has been set, let us consider this store under different conditions, where the exposure is greater, in order to find the maximum amount required per unit of cubic contents. For instance, take this store as one on the northwest corner fronting to the south, with the longest wall exposure to the east, having two ordinary windows of plate glass in the exposed side. According to calculations it would then require 230 square feet of radiation for 65 degrees at zero, including the additional amount necessary to offset the loss occasioned by the cold room above. This last statement assumes one square foot for every 72 of cubic contents. Suppose the store to be located on the opposite side of the street, so facing north and west, an additional 10 per cent. would be required, making about one square foor for every 66 cubic feet of contents.

One square foot to 60 of cubic contents is, therefore, deemed sufficient for severe cases, and could be set down as the other extreme, making the requirements of stores vary from one square foot for 100 cubic feet to one square foot for every 60 cubic feet of contents for zero outside temperature. Likewise in the workroom over the store, if heated in the same manner, requires, according to glass surface, wall surface, cubic contents and roof surface, which in this case was figured as wall surface, about 115 square feet of radiation, or one square foot to 80 cubic feet of contents. The foregoing schedule will do equally as well for workrooms similar to this, as many phases of this very type of room would resemble very closely the considerations given the store.

Radiators to Use.

A word might be said as regards the selection of the kind of radiators to use and their proper location. The radiation required for the store was divided into three radiators of 60 square feet each. The exposure lies all to the front of the store, so it is proper to place a convenient amount of radiation to cope with these cooling surfaces. As shown on the plans the type chosen in this particular case were low and narrow to permit access to the display windows and at the same time not interfere with the space required around the end of the counter. Two 20-inch, two-bar radiators, having 60 square feet in each, were placed as indicated, the remaining 60 square feet being placed alongside the bookkeeper's office, a standard (39 inches high) radiator of the three-bar type being used. By this arrangement two-thirds of the entire radiation is placed in the most effective place at the front of the store, the remaining third being located as shown on the plan, equalizes the heating of the store and prevents drafts.

Two points of interest are brought out by the choice of the radiators for the workroom and the placing of the same. Wall radiators are conceded to be the most efficient type of all radiators, but as they take up considerable wall space they are only adaptable in certain cases. It is fair to say that 15 per cent. less surface may be used over the ordinary type of radiators. In placing the radiators in the workroom it was necessary that the piping be simplified as much as possible. To this end the radiators were placed on the walls underneath the benches, which served the purpose admirably. The second point is here brought out in the fact that radiators recessed or placed under benches, where the circulation of air is not as free as when directly exposed, requires additional radiation to be added to offset this effect. In this case the type of radiator used, together with a slight increase of surface, effectually overcomes the decreased efficiency of the radiators. Two wall radiators, containing a total of 126 square feet, were placed as shown on the plans.

Air Vents and Boiler

As the ratios given herein are for zero temperatures, and lower temperatures are to be met, add for 10 degrees below zero about 12 per cent.; for 20 degrees below zero about 25 per cent. more radiation than would be estimated by the foregoing.

In a steam heating plant all radiators and the ends of mains should be provided with reliable automatic air vents, properly set and adjusted to relieve the air from the system. The boiler should be selected of ample capacity to take care of the radiators, all mains and branches, any of which are uncovered, providing radiating surface, as well as the radiators themselves. The system of piping is fully shown in the accompanying plans. All piping should be properly graded and have a continuous pitch of not less than one inch in ten feet from the highest point near the boiler.

By the method of heating used an even distribution of heat was had in all parts of the store, thereby preventing all uncomfortable draughts, while no dust, dirt or coal gas was carried through the heating system into the store. Although in its first cost the system may have been expensive, it was found that economy, cost of maintenance, durability and labor saving more than offset this higher first cost. And as the hardware merchant also conducts a heating and plumbing department, it afforded an excellent opportunity for the owner to demonstrate the workings of such a heating system to prospective customers and exhibit in actual operation the various goods used in conjunction with steam and hot water heating.

STOVE SUGGESTIONS.

Style is a point that counts more on base burners than on any other stove.

Keep the oven rack in the bottom of the oven ; if left in position it gives the oven a small appearance.

Your customers come in and say they want a stove with plain trimmings, but they generally purchase one having as much nickel ornaments as they can afford.

If some red transparent paper is fitted into a stove under the mica doors it makes a good evening display by setting an electric light bulb or a lamp inside the stove.

Often a very insignificant matter will affect the sale of a stove at the very last minute. Do not overlook such minor details as the ash pan, knobs, foot rails, teapot stands, etc.

Keep your sample stoves well blacked, nickel well polished, have no odds and ends littered over them and keep your poker, scraper guarantee, and mounter's card in the ash pan, (not in the oven.).

Cutting Patterns in the Tin Shop

Readers of Hardware and Metal Are Requested to Make Use of This Department—Questions Regarding Patterns Will be Answered by Experts—Discussion is also Invited on Any Matter Pertaining to the Tin Shop.

PATTERNS FOR ELBOWS.

To describe a pattern for an elbow elliptical to round and the elliptical to one side, let "ABCDEF" be the side elevation of the elbow, "H" the section on the line, "F" and ' A," and "JKLMN O" the section on the line "DC." To complete the plan it will be necessary to obtain the section on the miter line "EB" in elevation, for which proceed as follows :

Divide the profile "H" into equal spaces, as shown by the small figures 1 to 7. From the small figures in the profile "H" draw lines parallel to "A B" and intersect the miter line "EB" at points 1 to 7. Place the profile "V" which is similar to the profile "H" in its proper position, turning the circle one-quarter around, as shown by the small figures. Then at right angles to "AB" and from the intersections on the miter line "BE" drop lines intersecting those of the similar numbers drawn from the intersections in the profile "V" parallel to "PR." A line traced through points of intersection, as shown by "ROTS," will be the horizontal section on the line "BE" in elevation. From the point "A" and at right angles to "AB" draw a line intersecting the plan at "P" and "U." Connect "'P" with "R" and "U" with "T," then will "PRSTUJKLMNO" be the complete plan of the elbow corresponding to the side elevation.

HORIZONTAL ARM OF ELBOW.

For the pattern of the horizontal arm of the elbow, shown by "ABEF" in Fig. 1, proceed as follows :

At right angles to "AB" and in line with "AF" draw the line "WY," upon which place one-half of the stretchout of the profile "H," shown by the small figures 1 to 7. At right angles to "W Y," and from the small figures draw lines intersecting those of similar numbers drawn at right angles to "AB" from the intersections on the miter line "BE." A line traced through the intersections thus obtained, as shown by "W YGZ," will be the half pattern for the horizontal arm.

Before obtaining the pattern for the lower or vertical arm, it will be necessary to construct sections and diagrams of triangles. To avoid a confusion of lines, a duplicate of the lower section is shown in Fig. 2, in which "BCDE" in elevation, and "ORSTJM in plan are reproductions of similar letters and figures in Fig. 1.

Referring to Fig. 2, the lower arm shown is a transition piece from oblong to oval at the angles shown in the elevation. As the plan of the half-oval is divided into six equal parts, divide the two semi-circles of the oblong plan into six equal parts, each, as shown by the small figures 8 to 14 and 15 to 21; now connect solid lines in plan, as shown from 1 to 14, 2 to 13, 3 to 12, etc., until the last line, 2 to 16, is obtained. In similar manner connect points by dotted lines, as shown from 1 to 13, 2 to 12, 3 to 11, etc., until the last line, 1 to 16, is obtained. Then will the solid and dotted lines represent the bases of the triangles, which will be constructed as follows :

From the various intersections in the plan of the oblong erect perpendicular lines until they intersect the base line in elevation "DC," as shown by corresponding small figures. In a similar manner from the intersections on the oval plan erect perpendicular lines until they intersect the miter line "EB," as shown by the small figures. Now connect the solid lines, 2 to 13, 3 to 12, etc., which will represent the elevation of similar lines in the plan.

In practice it is not necessary to connect these points in elevation, and for

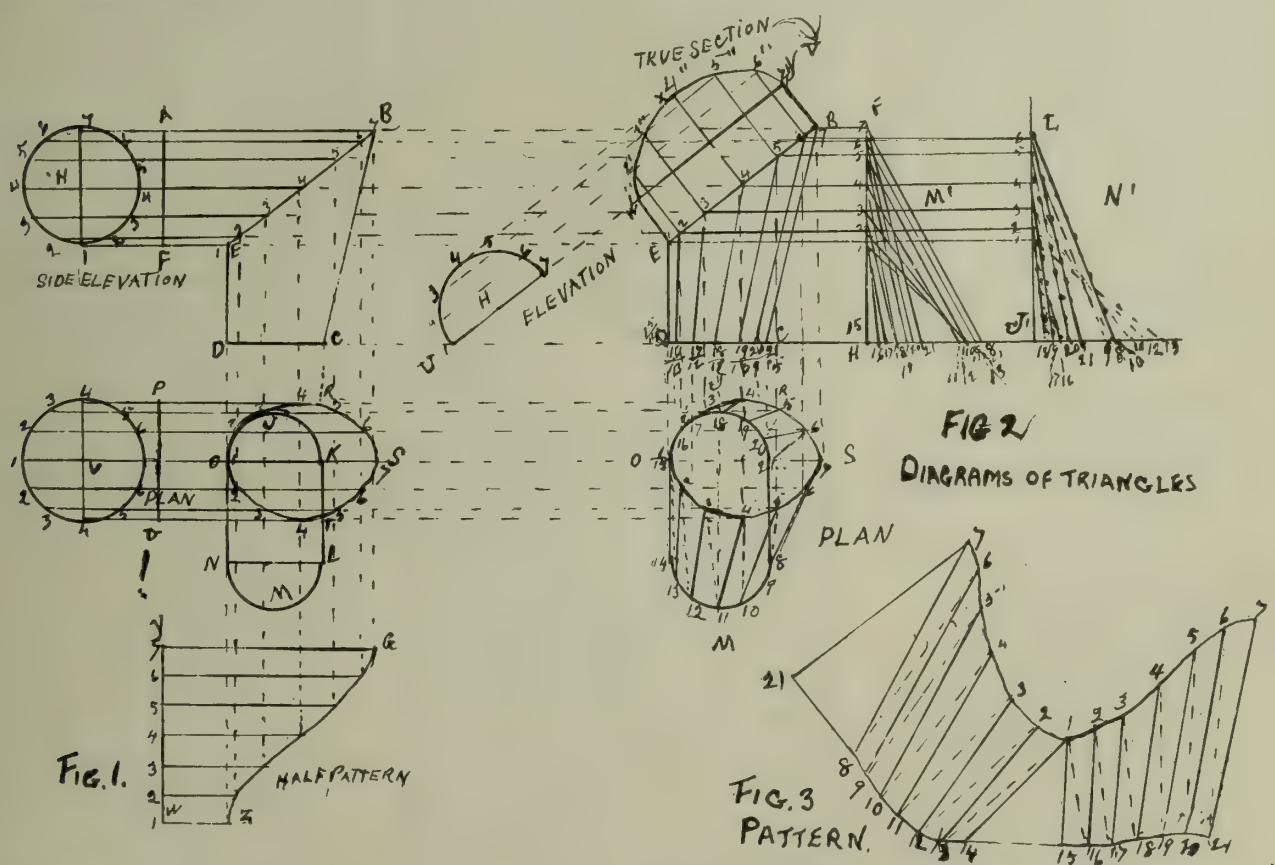


Fig. 1.

FIG 2
DIAGRAMS OF TRIANGLES

FIG. 3
PATTERN.

that reason the dotted lines in elevation have been omitted.

Extend the lines "DC" indefinitely to the right and at any point, as "H," erect the perpendicular line "HF." Then at right angles to "HF" and from the various intersections on the miter line "EB" draw lines intersecting "HF" at points 1 to 7. Now take the various lengths of the solid lines in plan and measuring in every instance from the point "H" in the diagram "M" locate points on the horizontal line "H-8," and from the points draw lines to intersections on the vertical line "HF," as: Take the length of the solid line 1 to 15 in plan and set it off on the horizontal line "H-8," locating the point 15, From 15 draw a line to the point 1 on the vertical line "HF." Then will 1 to 15 in the diagram "M" represent the actual distance of the line shown in plan by 1 to 15. In a like manner, take the distance 2 to 16 in plan and set it off on the horizontal line "H-8," locating the point 16. From 16 draw a line to 2 on the line "HF." Then will 16 to 2 be the actual length of the line shown by 16 to 2 in plan. Proceed in this manner until all the lines in the diagram "M" are drawn. In the same manner erect the vertical line "JL" and continue the horizontal lines from points on "EB," cutting "JL," as shown from "1" to "L." Continue the horizontal line "DJ" thus upon which set off the various lengths of the dotted lines of the plan, measuring in every distance from the point "J," thus marking the points on the horizontal line "J" to "13."

From these points lines are drawn to intersections on the vertical line "L J," as follows :

Take the length of the dotted line 1 to 16 in plan and set it off from "J" toward "13," thus locating the point 16. From 16 draw a line to the point "I" on the vertical line "LJ." Then will 1 to 16 in the diagram "N" represent the actual distance on the finished article of the dotted lines shown in the plan by 1 to 16. Continue in this manner until all the lines in diagram "N" are drawn.

It must be understood that all points shown from 1 to 7 in the horizontal section on the line "EB" are projected first on the line "EB" of the elevation, and then to the vertical lines "HF" and "JL" of the diagram, while all points shown in the plan on the line "DC" from 8 to 21 are transferred to the horizontal lines "H-8" and "J" to "13." The next step is to obtain a true section on the line "EB" in elevation, for which proceed as follows :

Draw any line parallel to "EB," as "UV," and upon it construct a half-profile on the line "AF" of the elevation, (Fig. 1) as shown at "H". Now from the various intersections 1 to 7 in the profile "H" carry lines parallel to "UV" and intersect these by lines of similar numbers drawn at right angles to "EB" from the intersections on the same. A line traced through the intersections thus formed, as shown from 1 to 7, will be one-half the true section on the line "EB." Having obtained the diagrams of triangles and the true section on "EB" we are now able, with the use of the oblong section of plan to develop the pattern for the lower arm as follows :

In Fig. 3 draw any horizontal line, as 14 to 15, equal in length to 14 to 15 of Fig. 2. Now with 15 to 1 in diagram "M" as radius, and 15 in Fig. 3 as centre, describe the arc "I." Then with 14 as centre and 14 to 1 in diagram "M" as radius, describe an arc intersecting the arc "I" in Fig. 3, forming the point "I." Now with 14 to 13 in plan, Fig. 2, as radius, and 14 of Fig. 3 as centre, describe the arc 13. Then with "I" as centre and 1 to 13 in the diagram "N" of Fig. 2 as radius, describe an arc intersecting the previous arc 13 in Fig. 3. Now with 1 to 2 in the true section "S" of Fig. 2 as radius and 1 of Fig. 3 as centre, describe arc 2. Then with 13 as centre and 13 to 2 in diagram "M" of Fig. 2 as radius, describe an arc intersecting the arc 2 in Fig. 3. Proceed in this manner, using alternately first the spaces in the oblong plan of Fig. 2 with the lengths of the longest side of the right angle triangle in the diagram "N" and the spaces in the true section "S" with the length of the slant lines in the diagram "M" until the line 8 to 7 in the pattern of Fig. 3 is obtained. Now with 8 to 21 in the oblong plan, Fig. 2, as radius, and 8 of Fig. 3 as centre, describe the arc 21. Then with 7 as centre and 7-21 in diagram "M" of Fig. 2 as radius, describe an arc intersecting the previous arc 21 in Fig. 3. Proceed in the same manner for the pattern opposite the line "1 to 15" in Fig. 3, using alternately first the spaces in the oblong plan Fig. 2, with the length of the slant lines in diagram "N" and the spaces in the true section "S" with the lengths of the solid slant lines in diagram "M" until the last line, 7 to 21, in Fig. 3, is obtained, which is of the same length of 7 to 21 on the opposite end of the drawing. Lines traced through points thus obtained, as shown by 7 to 1 to 7 and 21 to 15, 14, 8, 21, will complete the full pattern for the upper arm of the elbow or elliptical section of elbow.

Edges must be allowed. W. M. M.

At one time it was a matter of choice with every merchant whether a merchant should keep good goods or cheap goods, at this time, however, it is sell good goods or go under.

BETTER FURNACE WORK AND PRICES.

In my opinion, writes J. Rutherford, Simcoe, Ont., the greatest foes of better work and prices are those who have caused hot air heating to be regarded as a poorer method than steam or hot water. There are two classes: first those who are after work at any price and who figure in all cases as cheaply as possible, doing a botch job in an endeavor to get out with a profit; and second, those who endeavor to do good work, but by reason of sticking to old-fashioned methods, or from not having a clear understanding of the principles of heating, really do as much harm or more than the class mentioned first.

In every town there is sure to be at least one of the first mentioned class if not more; but if any one desiring to get a good price for good jobs will go at it in the right way, he will find this class perfectly harmless; in fact, their failures and generally unsatisfactory work will serve to set off and advertise the good work that the canvasser has done. The policy of my firm has been and will continue to be, when asked to figure on a job to lay out a first-class job in every case and then to make the price suit, allowing from 20 to 25 per cent. on the cost of material and labor and then to stick to that price. It is a policy that has sent many contracts to our competitors of the class first mentioned above, but in many cases the customer has given us his work afterwards; and on the other hand, we have a large and increasing business and a record of not a single unsatisfactory job, while, most important of all, we make a good profit.

Good Furnace Systems Economical.

Now the second class equally with the first, is responsible for what is one of the greatest troubles in the furnace business, the belief of the general public that a hot air system cannot be as economical as a hot water system. This is absolutely wrong. If the average house-owner who pays, say $500 for a hot water plant, would pay, say, $250 for a proper hot air furnace properly installed he would get equally as good results and in many cases better.

The principle of both is the same. The only difference is in the one employing water, the other, air as the medium to transmit the heat of the fuel. In a furnace system taking the cold air from the inside (and it is this plan that I wish to preach or advocate), the air descends from the house to the furnace, is warmed, rises, is cooled and again returns, exactly as with water. The action is the same and the results and economy will be found to be the same.

But the number of the second class who stick to the antiquated method of

taking the cold air from outside is astonishing, and they are greatly to blame for the poor opinion of the furnace system as a method of heating. I suppose some one who reads this will raise the moss grown howl of ventilation. The average house has more ventilation than is wanted and any thinking man knows it, else how is it possible to continually draw air in through the furnace to heat the house when no special vents are provided.

How can you expect economy when you take in air at a temperature of zero and then let it go to waste at a temperature of 50 or 60 degrees? What would you think of a hot water plant that constantly took in cold water from the street main and let it discharge from the radiators into the sewer? Yet it is all the same. Very few ordinary houses heated by water have any ventilating system, yet to my knowledge no one has died as a result of it. Some furnace men talk as though a circulating system would be the death of all in the house; but as yet I have had no bonus from the undertakers nor have I hopes of any.

Would any one call it reasonable to take, say, a 20-in. cold air from the outside of a church that may possibly contain 300 or 400 people and then use a 10-in. to supply three or four people in an ordinary house? And yet this is often done. Where is there any proportion in it?

Properly Located Registers.

If you want a good job, make your hot air pipes of ample size to give a large volume of warm (not overheated) air. Use a furnace that will do the work easily in any weather, and last and most important of all, make your cold air pipes equal in volume or area and if possible, in number to the hot air pipes. Put a cold air face equal to the hot air register in every room, except where the rooms are connected by arches, when one larger register will answer. Locate the hot air registers as close to the furnace as possible, and the cold air registers on the outside walls and whenever permitted under windows or near outside doors.

This is practically the whole of my theory of furnace heating in ordinary work, and I hope to hear from others who have had the same experience that we have had here.

DRAFT FOR GAS RANGES.

Never connect the gas range with the chimney direct. There are several reasons for this. In the first place, if you have got a good chimney, with a good draft, it will pull all the heat up the chimney. In the second place, if you have not got a good draft you will find it will check the efficiency of your range.

The best thing is to carry a pipe from the range to a position near an opening into the chimney and then have a funnel so that the products of combustion will naturally flow into the funnel, go into the chimney and go away.

Then you overcome the difficulty of the extra draft. If there is extra draft it will pull the air in around your funnel and not affect your range. If you have not enough draft it will flow out into the room and you must open the windows. You are not losing economy in your stove. You have got just about enough draft to take your products of combustion away and not lose too much heat. The philosophy of using gas is to let the products of combustion go away at the lowest temperature consistent with good combustion.

THE MOUNTING OF STOVES.

As indicating the importance of proper and thorough inspection in the matter of assembling the parts of a stove, the methods pursued in a large stove foundry as outlined in a recent article in System, will be of some interest.

In the mounting room any plate thrown out is traced back to the molder who cast it, each molder's factory number being stamped in the mold and cast in each piece he makes. If the mounter fails to set a door so that it fits tightly and yet moves without friction the inspector's chalk lines a mark on that door. No one, under penalty of discharge, can erase that chalk mark except the inspector, who does so when the fault is corrected.

When the inspector approves a completed stove he has recourse to a card bearing two coupons. The first coupon, which he tears off, bears the style and size of the stove, its consecutive number in the volume of production and the names of the inspector and mounter set in the proper spaces with a rubber stamp. This tab, forwarded to the stockkeeper, furnishes a constant check on the number of stoves mounted. The second coupon, bearing the factory numbers of the packer and crater, is detached and forwarded to the same office when the stove is shipped. The body of the card, with corresponding information as to inspector and mounter, goes with the stove to the retailer or individual purchaser. If anything is found wrong, no matter how many years after purchase, reference to this card of the company shows, by a glance at the filed coupons, the workmen responsible at every stage.

MANUFACTURERS' PRICES.

The question as to the policy to be pursued in regard to prices is for the manufacturer, a difficult and complicated one. Sometimes, indeed, the question is practically settled for him, as the condition of the market is such as to make it not only evident, but imperative, that his prices be moved up or down, as the case may be. But in other circumstances the determining of the course to be pursued involves a broad view of the situation and a careful estimating and calculating of probabilities. In a market which is under suspicion, in which there is an undertone of weakness, it is not possible to lay down hard and fast rules as to the wisdom or unwisdom of reducing prices. Sometimes a substantial reduction satisfies the expectation of the trade and puts the article in question on a basis, so far as its price is concerned, which is regarded by dealers as a fair one at which it is safe to buy. A lowering of the price, however, has often as its first and natural result a diminishing of confidence in the strenth of the market, and buyers continue to hold off, so that they may test the market, and they perhaps wait for further concessions. It is certainly the experience of manufacturers that the trade are reluctant to buy on a falling market.

THE HOT AIR FURNACE.

When the wind blows from the north
  How I fret, O how I fume;
For I cannot drive the heat
  Into our dining-room.
And the parlor's icy cold
  For no heat can it obtain
When the wind is from the north
  All my stoking is in vain.

When the wind is from the south,
  Then the sitting room is chill,
While the heat that's in the bedrooms
  Would exactly fill the bill.
But we cannot keep it down
  So we shiver and we freeze;
When the wind is from the south,
  All we get downstairs is breeze.

When the wind is from the east
  Then the upstairs rooms are cold;
And our parlor's like the hot room,
  Of a Turkish bath I'm told.
Then our sitting-room gets tropic
  And our dining-room's a fright;
When the wind is in the east
  We get heat enough alright.

When the wind is in the west,
  Up the chimney flies the heat,
And we get a breath of summer,
  When we wander down the street.
But let no wind be blowing
  Then we swelter and perspire;
Then we cannot check the furnace,
  And we cannot cool the fire.

—Edgar A. Guest.

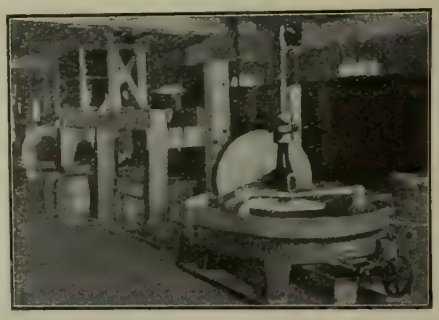
Profits in Prepared Paint

Some Abuses Which Have Passed and Some That Remain—The Hardware Store the Natural Place for the Public to Look for Paints.

Passing of Paint Trade Abuses

By G. B. Heckel, Secretary Paint Manufacturers' Association of United States, in Hardware, New York.

Since the dawn of the moral sense, moralists have been lifting their voices in warning against the first step towards evil. Obviously, the man that never takes the first step will make no progress along the "primrose path."



Trade abuses usually have their beginnings in apparently trivial or excusable deviations from the "straight and narrow way." But the hint being given, there are always those who see in indirection their chance to obtain advantage.

The paint trade which, in some of its phases, is several centuries old, has its share of barnacles in the form of antique abuses. Some of these abuses have been innocent enough in the beginning, but, as is the habit of abuses, have blazed the way to outright fraud. Consider, for example, the short-weight (or, as manufacturers prefer to call it, the "gross-weight") keg of lead. Some years ago I had occasion to investigate this matter, and found that the weight of available white lead in the hundred pounds ran all the way from five pounds short, for the hundred-pound keg, to more than fifteen pounds short in the 12½-pound packages. The custom of packing lead in "gross weight" packages is supposed to have originated in the fact that a pound of keg costs as much as a pound of lead, which is true enough—at the present date. But just as soon as the practice becomes a commercial custom ways were devised by the unscrupulous by which the proportionate weight of the container could be cheaply increased—to the profit of the manufacturer. It is also curious to note, as a consequence of the custom, that when steel kegs began to make their appearance as containers for lead, it was found necessary to weight their bottoms, so as to equalize the "tare" with that of the wooden kegs displaced. In other words, the manufacturer was reduced to the ridiculous position of paying for additions to the keg in order to keep its contents down to the customary shortage.

Another peculiar case was that of a western maker of a new process lead, who on discovering that the density of his product reduced the customary shortage in the ordinary lead keg, was forced to have the heads set in a fraction of an inch at each end.

Another abuse, still more venerable, probably had a historical origin quite as innocent; yet it has grown with time into an abuse that has become intolerable. I refer to the practice of calling white paste paints, of whatever origin, "white lead."

Inert reinforcing pigments were first used with white lead, there is every reason to believe, by European artists in an attempt to increase the stability of the pigment. Later, when paint came more widely into use for the painting of houses and other buildings, philan-

"Lead Chasers" Grinding White Lead.

thropists, noting the ravages of the dry lead among painters, set themselves to an attempt to mitigate or correct the evil. From the last two decades of the eighteenth century to the middle of the nineteenth, technical literature is full of suggestions of substitutes for the poisonous dry white lead. The introduction of oxide of zinc as a pigment was due to these investigations, and even to-day when the danger from handling lead has been almost completely removed by furnishing it to painters ground in oil, European painters are still agitating against its employment, and have caused many legal restrictions to be thrown around it.

However, ever since the introduction of "lead in oil" as a commercial product, the title has covered a multitude of formulas, ranging from pure hydrocarbonate to compounds containing no lead whatever.

When the old "Lead Trust" was formed it was decided by the corroders to abandon the practice and market only the pure white lead under that title; but I have seen the formulas of one of the constituent companies of the original trust, showing a wide latitude in the composition of its "white leads."

A young man who afterwards became prominent in the paint business, first went on the road for this concern. His maiden trip through his territory discouraged him greatly, because he found everywhere a brand of lead which the trade assured him was superior to his own, yet sold at about twenty per cent. below his best figure. As it turned out this competing brand was an anonymous product prepared by his own house for the jobbing trade. The formula (a very good one by the way) was about one-third each of lead, zinc and barytes.

The entire paint manufacturing trade of course followed the same practice—a bad one, by whomever originated—and when the lead corroders decided to sell nothing but white lead under the name of white lead, most of the others with brands of established reputation decided not to follow this example of light and leading.

Formerly when the titles were nicely graded as to purity—"Strictly Pure White Lead" was understood to contain nothing but white lead: "Pure White Lead" ordinarily held a high percentage of lead; while in "Genuine White Lead" there was commonly only enough lead to justify the use of the title. The fancy brand "white leads" were simply white paste paints, ranging from excellent combinations of zinc oxide and barytes to the cheapest combinations of pigments that could be made to look white and feel heavy. The ethics or lack of ethics in the practice is self-evident; but it was a venerable trade abuse, from which the conscientious found it hard to break away, while the unscrupulous found it a means of illegitimate profit.

Conscientious manufacturers, however, have never rested easy under the burden of this custom. Early in the history of the newly formed Lead Trust, one large manufacturer of excellent paint, angered by the attacks of this new competition, banished the title from his products and boasted that he had not a

pound of white lead in his factory. Others, as occasion arose to introduce new brands, omitted the word "lead" and used the title "white" or "paint," without the qualifying term.

Still the practice, for obvious reasons, has pretty generally persisted, and will persist until the new reform movement reaches the entire trade.

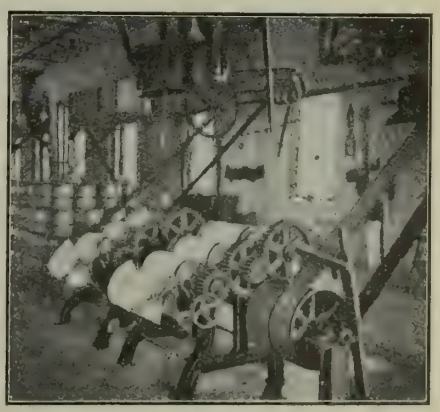
Another abuse, similar to that of the net-weight lead-keg is the short-weight color can and the short measured mixed

Buhr Stone Mills Grinding Paste Paints

paint can. The short-weight color can is a direct descendant of the short-weight lead-keg; but the short-measure paint can had its origin in the diversity of standards of measure for volume. Originally we had the "imperial" (English) or "wine" gallon of 277.123 cubic inches, later the U. S. standard liquid gallon, of 231 cubic inches; the dry measure gallon, of 268.8025 cubic inches; and the fluid measure gallon, based upon the minim and dram. This confusion was further complicated by the fact that liquids follow the physical law governing expansion and contraction with variation of temperature. Thus a standard gallon of linseed oil may weigh only seven and a half pounds in midsummer, while in midwinter it may reach nearly eight pounds. For this reason linseed oil in bulk is always sold by weight, seven and a half pounds to the gallon. A conventional weight agreed on in connection with imports.

But prepared paints are sold by the volume, and the can, like the white lead-keg, costs money. At the beginning of the industry some manufacturers used the wine gallon, while others adopted the liquid gallon. As the trade expanded and the two classes of manufacturers began to compete, the user of the wine gallon was forced to reduce the size of his package to the newly established U. S. standard. His competitor, whose advantage was thus annulled, was sorely tempted by the circumstances to put a little less paint in the can so as to leave ample room for expansion in hot weather. Again the unscrupulous, whom nothing but the fear of punishment ever restrains, cast all standards aside, and despite the stand made by reputable manufacturers against the practice, the market was soon full of gallons measuring from seven pints to a mere fraction under full measure. This shortage, which amounted in many cases to little or nothing and was even sometimes converted to a surplus in the gallon and half gallon cans, became ludicrous in the pints and half-pints, especially among cheaper household goods, which were not regarded by the makers as legitimate paint products, but were put up for the amusement of domestic amateurs.

Similar abuses have also insinuated themselves into the varnish trade, where it is a well-known fact that, with the exception of a very few houses and of the special trade-mark brands of these houses, the quality of any varnish is far more closely indicated by its price than by its title. "Hard Oil Finish," for example, once indicated a good substantial grade of Kauri gum—linseed oil varnish. To-day the dealer can secure "Hard Oil Finishes" of almost any grade, from a rosin "gloss oil" upwards. The same condition prevails with all the well-known grades of varnish. The dealer's only course, if he would be sure of the quality of his goods, is to buy trade-mark lines, or to confine his trade to reputable makers.



Still another abuse, recently more prevalant than now, was the practice of exchanging paints. The manufacturer, in order to secure a competitor's customer would take at cost the goods the dealer had in stock and substitute therefor a nice fresh stock of his own products. The displaced goods were then sold at a reduced price to the dealer's neighbor who happened to be handling that line. The maker of the displaced goods should naturally retaliate by hunting up one of his competitor's customers and paying him the same delicate compliment. As a final result the country was full of stocks of the same goods bought by competing dealers at different figures. Prices were constantly cut and the entire trade was demoralized. This abuse, as a result of experience and wiser counsels, has practically disappeared.

The last abuse on which I shall touch is that of long credits and long forward datings. The varnish trade is pre-eminent in this abuse, which has been significantly lampooned in the saying that varnish bills are payable one day after the Day of Judgment. No merchant who is capable of conducting a profitable business should need to be told that long credits are a snare and a delusion. They are, first of all, a temptation to overstock, and, consequently, they are expensive, since no matter what the seller may assert to the contrary, interest in one form or another must always be added to the cost of goods sold on long time. The manufacturers themselves do not demand nor accept long credits. They borrow money from their banks at five or six per cent. per annum, and take the offered discounts of two or three per cent. for cash in ten or thirty days. Two per cent. a month to the man who is "turning over his capital" frequently means twenty-four per cent. a year, and with the money borrowed from his bank at six per cent., he effects a saving on his annual purchases of eighteen per cent.

Long forward datings, while often convenient for the manufacturer, undoubtedly add, because of the consequent losses, to the expense of his business and consequently to the cost of his products—and this extra cost the dealer and the consumer must pay. There is a movement, prompted by current experience, to reform these two abuses of long credits and long forward datings. What it will come to we shall eventually know.

To return now to our most notorious abuses—short weights and measures and mislabeling. As already stated the more honest manufacturers (and this appellation undoubtedly belongs to the great majority), have always been uneasy in their minds regarding them. Some have avoided or evaded the practices in part, but practically all have inherited them in one or another form, and have simply been forced by the exigencies of business to follow the crowd.

In 1905 the State of North Dakota, the existence of which paint manufac-

Roller Mills Grinding Colors.

turers generally remembered once a year, when the flax harvest became due, suddenly and without warning passed a law to the effect that all paints containing ingredients other than pure white lead, pure zinc oxide, pure tinting colors, pure linseed oil, pure turpentine and pure Japan dryers, must carry the formula label on the can or the dealer handling it would, to use the slang of the day, get liberally "soaked." The

first emotion of the manufacturers when they heard this news was indignation. Why should an out-of-the-way legislature attempt to dictate the composition of paint? The second emotion was dismay at the real injustice of law which, while purporting to set a standard, ignored so many facts and perpetrated a deep injustice. Suit was entered against the law on constitutional grounds, the charge being that it violated the fourteenth amendment of the constitution in its discriminations. Well, the Supreme Court has finally upheld this law, deciding in substance that, in the exercise of its police powers, a state can go to the limit in foolishness if it is so minded. But during the course of the two years' proceedings the manufacturers concerned have gradually lost sight of the injury and have come to see the benefits opened to them by paint legislation. It may be said, once for all, that no manufacturer regards this law either as equitable or as practical, but they have generally come to realize that wise paint legislation may not be an unmixed evil.

After the passage of the North Dakota law and as a result of the publicity following it, other State Legislatures, eager to be busy and useful, promptly concluded that it would be a good thing to adopt something of the same general sort. The result was the introduction of some sixty or seventy paint bills last winter in the legislatures of eighteen or twenty States. These bills being generally drawn up by lawyers whose knowledge of paint was acquired by getting it on their clothing, were most of them fearfully and wonderfully made. Some of them were unintelligible, most of them were impracticable, and all of them differed in some particular which would have required a different label for each separate State.

The manufacturers, seeing that legislation was inevitable, got together and decided that while perhaps (only perhaps now), while perhaps things would have been better without legislation, still if there were going to be laws anyway they had better be reasonable laws and all alike. They then drafted a law which, while giving the public much more than was demanded in many proposed laws, was stil practicable from the manufacturing point of view.

This law was adopted in the States of Minnesota, Iowa and South Dakota, and in several other States that eventually decided not to pass any law for the present, was accepted gladly as a substitute for all other proposed measures.

This law, in brief, requires the complete formula on all paint packages, no matter what the constituents. But it also provides that while the true analysis of the tinting pigments must be given together with the percentages of all other ingredients, the percentages of the tinting pigments need not be given. The reason for this exception is that many of the tinting pigments—especilaly the natural colors, like siennas, umbers, ochres, etc.—vary in color, and this variation must be compensated for in manufacture by increasing the proportion accordingly. Hence, if the law required the percentages of tinting materials to be given, every batch of paint would have to be analyzed separately and a new label printed accordingly.

To the Iowa law a clause was added which, for that State at least, solved the weights and measures problem. The law says: "The label shall also state, in case of liquid paints, oils and other compounds, on packages holding one quart or more, the net measure of contents of each can or package. In case of white lead and other paints and compounds, the label shall show on packages weighing four pounds or more the net weight of each can, package or container."

GET WISE.

Of all punk guff inspired by gall,
De limit is this "I know it all."
De yap what springs it always is
A dead one in his line o' biz.
His nut is swelled; his brain is shrunk;
His trolley's broke; his talk is bunk;
He may be boss, but you c'n bet
He'll finish in de junk heap yet.
He's got his number—23
The way they plays th' game today,
It's Mr. Wiseguy draws the pay.
No swell heads goes. Th' guys what rise
Is them as hustles to get wise.
—From Selling Electricity.

Thus far the laws. It will be seen that outside of the contiguous States comprising the two Dakotas, Minnesota and Iowa, there is no law requiring manufacturers to do anything different from what they have hitherto done. But, as I have said, the majority have always wanted to be honest and on the slender basis of the laws in this remote section of the Northwest, they have undertaken the task of reforming the two abuses for the whole United States. First of all, many of them, including practically all the larger and many of the smaller manufacturers, are preparing immediately to print their complete formulas on their products, according to the requirements of these State laws; and, secondly, they are going to pack their goods full weight and full measure as rapidly as new goods are put out. There will be some confusion for a little while perhaps, until the old stock is worked off, but the necessary revision of price lists will take care of that.

It will be noted that the Iowa law touches nothing smaller than quarts and four pound packages; but the manufacturers are making the reform thorough while they are at it, and hereafter pound cans will contain sixteen ounces of paint and half pints will measure up sixteen to the gallon. If the reader has seen the new white lead card, he must have realized that something was the matter with it. There was; it means that the white lead manufacturers have also adopted net weights for their packages of lead, and intend hereafter to give the purchaser in the 12½-lb. packages, not 12½ lbs. of keg and lead together, but 12½ lbs. of "strictly pure" lead. It was a manly move, not necessitated by the situation, and the corroders deserve full credit for having had the courage of their convictions.

There will undoubtedly be some paint manufacturers who will reform nothing until circumstances force them. Some few of them, perhaps, because of a fancied advantage to be gained, others from a natural if mistaken view of their rights, and still others because of inherent inertia. But the reform is coming to all of them, sooner or later, whether they wish it or not, and when they realize the consequences of their recalcitrancy, they will regret that they did not seize the opportunity to become willing leaders instead of reluctant followers.

For paint laws are coming. I am one of those who think these laws comparatively misplaced and unnecessary. There are so many things that touch the people closer than paint, so many materials in which fraud is more flagrant, that I think paint manufacturers have been accorded a "bad eminence" that was undeserved. I think also that a general law penalizing misrepresentation would more adequately meet the requirements. But the people have acquired the habit of passing paint laws as an amusement and the habit is going to continue until something else distracts attention. Furthermore, it is scarcely to be expected of human nature that those manufacturers who are frankly revealing formulas and selling net weights and full measures will tolerate very long the unfair competition of those who profit by clinging to the old abuses. The paint manufacturers themselves are bound to demand State laws to protect them against competitors whom only a law will regulate.

The Lead Industry in Canada

F. J. Arrowsmith Describes the Difficulties of Pioneer Miners—What Transportation Facilities Have Done—Advanced Methods of Smelting and Refining—From Crude Ore to Finished Article.

The vast strides made in the production of lead within the last decade or so is but another example of the magnificent progress that has attended the development of Canada's mineral resources. Year by year the country is becoming more self-feeding. Industrial activity is straining every nerve to catch up with the consumptive demand of an ever-growing population, and rapidly winning. Mine after mine, smelter after smelter, furnace after furnace, add an increasing quota to the general productiveness of the country, until the day seems ever nearer when Canada will not only be able to supply all her own needs, but with argosies heavily freighted with mineral wealth, will be able to vie with, and control, the present primary metal markets of the world.

In the lead industry we have a notable instance of the ease with which Canada, adequately supported, can supply more than the domestic demand, even though her mineral fields have been but scratched. In the early history of lead mining, when prospectors had to face trackless forests, and ardous porterage, with no capital but their own enthusiasm, no machinery but their own hands, and the output, in consequence, but scanty, no one could have imagined that the situation would have changed so completely as it has done to-day. The pioneer prospector who struggled against every obstacle of nature in extracting lead from the rich fields adjacent to Kootenay Lake—still the most productive territory in the country—had to load his ore upon horseback, and trail many weary miles through thick forests to a point on Kootenay Lake in order that his output could be forwarded by boat and rail to smelters in the United States. Contrast this primitive working of the lead "grass roots," and the laborious and expensive transportation, with the state of things prevailing now—mines with their hundreds of workmen, railroad connections, steamboat facilities, smelters at Trail, Nelson, and Marysville refining the metal in ever increasing quantities—and the wonderful development that has taken place can be more readily understood. Since the day when railroad construction opened up the district, when the Provincial Government with land grants, and the Dominion Government with its bounty, stimulated and encouraged operations, and enabled domestic mines to compete with foreign production, the industry has never looked back.

British Columbia at the present moment practically controls the lead output of Canada. In 1906 the lead production of the Dominion was estimated to be worth $2,779,558, and of this total British Columbia contributed $2,667,578. The development of the industry in British Columbia can be seen from the following figures. In 1887 when silver and lead were the only mineral products of the province, 204,800 pounds of lead to the value of $9,216 were extracted, while in 1906, 52,408,217 pounds to the value of $2,667,578 were extracted. These figures speak for themselves. The principal lead producing district is the Fort Steel division, which contains the great mines St. Eugene and Sullivan, but the Nelson, Slocan, Ainsworth, Lardeau, and other districts contributed in varying quantities to the whole total. Practically all the ore produced is now treated by the domestic smelters. In past years contracts for many thousand tons of concentrates were made by the Consolidated Mining and Smelting Company—who operate the Trail smelter—with European firms for shipment to Antwerp and Hamburg, where there was a ready market for the product in competition with foreign lead concentrates. Owing to the enlargements of the lead plant at Trail, however the whole of the concentrates are now smelted and refined at home. The Trail smelter, situated on the Columbia River, close to Rossland, possesses a complete smelting and refining plant, and with its lead pipe factory, is the only establishment of its kind in Canada. The St. Eugene mine of the company, situated at Moyie, is the largest single silver-lead producing mine in Canada, and the second largest on the American continent. It is developed for a length of 400 feet, and to a depth of 2,000 feet. It has eight miles of working, and has produced over half a million tons of ore. The Sullivan mine at Kimberley is the next largest in the Province, and ships large quantities of ore to the Marysville smelter. Leaving the output of the once famous Slocan district far behind, the Fort Steele Mining division now produces about 85 per cent. of the total lead output of the province.

C.P.R. Smelter and Columbia River, Trail, B.C.

A striking feature of the lead industry, in common with the whole mineral production, is the tendency of the larger companies towards consolidation, several now owning both their own mines and smelters. This enables a more systematic operation of the mines to be brought about, better management, reduced expenses, increased production, and the maintenance of large ore reserves, while adequate capital is available when these companies desire to acquire new properties. There is no doubt that lead production is established on a sound, conservative basis, and with the development of other fields not only in British Columbia, but in other parts of Canada likewise—for this province has not a monopoly in lead—the production of the metal will become one of Canada's greatest assets.

Next month the Dominion statute, under which bounties have been paid

on lead, expires, and an effort is being made by the mining interests concerned to have the law extended for another term of five years, but with certain revised conditions. Although the industry has made such great strides, 60 mines being now operated, compared with 26 some 5 years ago, it is not yet considered strong enough, in face of the many disadvantages still besetting it, to stand alone. British lead, under the preference, is a formidable competitor, while the domestic product is shut out of the American market by a tax of $24 per ton. In addition to this the industry is handicapped in the open markets of the world by the cost of distribution, the lead being smelted so far away from Atlantic and Pacific ports. The marketing charge in the States is $3.90 per ton, while in Canada it is $9. The drawback, therefore, so far as distribution is concerned can be understood.

Bounties on lead have been paid since 1899, but it was not until 1903 that there was any connection between them and the price of lead in London. In the latter year the Government virtually set apart the sum of $2,500,000 for expending on bounties between that time and June 30, 1908, the disbursements to begin when the English price was £12 10s. per long ton, and to be paid at the rate of 75 cents per 100 pounds, so that a price of £16 per long ton, or thereabouts, could be maintained for the domestic lead producer. When the price exceeded £16 the bounty ceased. At this total the price was much below that obtained by mine owners in the United States. The price of lead in England, however, rose above the fixed figure, and the bounty in consequence became in part inoperative, the result being that by next month only about $750 000 will have been used for bounty purposes. The Government is now asked to vote a fresh appropriation of $2,500,000, and to allow the bounty to begin when the English price is £14 10s., and to cease at £18. This would place the Canadian price on something approaching a parity with that in the States, where, on the whole, the cost of production is cheaper. It is contended that the industry will soon be able to take care of itself without any artificial aid, but it is essential, at its present stage of growth, that Government encouragment should be maintained for another five years under the new conditions.

Mining, Smelting and Refining.

The several processes through which lead goes, from the time it is detached from mother earth, to the day it is placed, in its various consumptive forms, in the hands of the consumers, are most interesting, not to say complicated. Science is always evolving fresh methods of treatment whereby man can secure the best results from the products of nature, and in the lead industry of Canada, the fullest use has been taken of this development by our progressive producers. Processes, which contented lead refiners and manufacturers, for hundreds of years—and are contenting them now in other lands—have been discarded for better ones. No stone has been left unturned to utilize this natural wealth of the country to the best advantage, and the good results can be seen in the pure pig and corroded lead which Canada places upon the market.

Lead ore, after being extracted from the rock, is crushed into a granulated mass at the surface of the mine by rock breakers, and similar contrivances. It then goes through a mechanical washing process, by which means the valuable portions of the ore are separated from the earthy matter. From the mine this ore, consisting of lead, sulphur, gold, and mixed rock, as the case may be, is sent to the smelter.

The first operation here is one of roasting, so that the greater portion of the sulphur may be removed. Until recently this roasting was done by working the ore about by tools on a flat hearth furnace, where exposed to heated air, the sulphur escaped as gas during the burning, leaving the remaining mass in a fit condition for the blast furnace. At Trail and Nelson, however, this roasting by hand has been replaced by the Huntingdon—Heberlein process, which is a far better method of desulphurization. The ore, with an addition of limestone, is partially roasted in a mechanical furnace, and is then dumped into large hooded hemipherical cast iron pots with flues to take off the resultant gases. The hot ore, coming into contact with kindling wood placed at the bottom, causes ignition. The ore is then freely watered in order that the combustion should be slow, and permit of no chance of overheating. Perforated false bottoms to the pots, allow of air being blown through the slowly burning ore, until the whole becomes thoroughly roasted, and converted into an almost solid mass. The pots are then inverted, and the red hot substance falling upon blocks of iron becomes broken. Manual labor further crushes the pieces until they are small enough to use in the blast furnace.

Lead Smelting at Trail, B.C.

In the blast furnace, which is heated by coke, the roasted ore is charged with suitable fluxes—limestone, etc., used to promote fusion—and other purer ore which did not need the primary burning, and undergoes the completed process of smelting. The product of the treatment is an impure lead which contains the gold, silver and any other

substance which may have been contained in the crude ore. There is also deposited a certain amount of matter, containing lead, copper, iron, sulphur, etc., which has to be retreated and slag or fused earthy matter which is thrown away. The lead must now be refined before it is suitable for the market.

The common process of refining consists in melting the ore in a reverberatory furnace, which is a furnace like a large flat tank with a fireplace at one end. By this means many of the impurities are burned out, or are removed as they float to the top of the molten metal, but the silver and gold which remain are extracted by the addition of zinc. A combination of zinc, gold and silver is formed which rises to the surface as a crust. This crust is removed, and worked up for the precious metals it contains. The lead is again refined to dispose of the zinc, and the pure metal is then moulded into pigs and sent to the market.

At Trail a new process—an invention of E. G. Betts, which has aroused the interest of the metallurgical world—resembling the electrolytic copper process, replaces the method of reverberatory refining. The impure lead from the blast furnace is cast into large slabs and hung alternately with thin similar sized sheets of pure lead, previously obtained, in tanks containing an acid solution produced by the action of sulphuric acid on flour-spar and quartz. An electrical current passes from the impure slabs through the solution to the sheets. This causes the slabs to dissolve in the solution, the impurities sink to the bottom of the tank as mud, and the pure metal is conveyed and deposited by the current on to the sheets, which gradually become thicker. When they are of sufficient size they are taken out of the tank, melted down, and cast into pigs, while the mud is taken away to be further treated for the gold and silver it may contain.

Making Pipe and Shot.

Lead enters largely into the domestic uses of the country, but its most extensive employment is probably in the shape of pipe, shot, and in a corroded form as white lead for paint. To convert pig lead into pipe is a simple process and known as squirting. The metal is made molten in a furnace at a temperature of 620F., and then run into a cylinder. This cylinder at a pressure of 3,000 to 4 000 pounds to the square inch is forced up against, and penetrated by, a ram. The ram is hollow with a die fixed at the end for the size of the pipe or wire desired, and the lead is squeezed through the die, emerges from the top of the cylinder in the requisite shape and thickness. The pipe or wire is then run upon a wooden coil, and wound round by hand in the circular folded shape as seen in plumbers' shops.

An interesting operation, although a simple one, is that of making shot. At the top of a high tower, molten lead to which a small amount of arsenic has been added to impart hardness, is ladled out into a colander perforated to the size of the shot required. The molten lead then falls through space into a water vat at the bottom of the tower, assuming in its passage a perfectly spherical shape. A small elevator runs continuously into the vat, and carries the shot into a drier. This is a nearly horizontal cylinder of iron, heated by gas, having a small slant to allow the shot to run into a receptacle. A bucket elevator takes the shot to a revolving polisher, where it is polished with plumbago. From here the shot goes into a riddler and is automatically sorted. It is then packed up in bags, and is ready for shipment.

Shot, however is not bought by sportsmen to the extent it used to be. There was a time when the enthusiastic shooter rejected the factory loaded shell under the belief that he could fill his shell better, and in more correct proportions than the manufacturer. But this fallacy, like the article itself, has been exploded. The precise machinery of the cartridge companies turns out the article more cheaply and more accurately than can the sportsman, and the latter having realized this, the old tedious process of personal loading is falling into desuetude.

White Lead Production.

In dealing with the later development of the lead industry of Canada, the domestic manufacture of dry white lead cannot be overlooked. Every one knows how largely this constituent enters into the trade necessities of the country. It is the basis of most paint productions and Canada with her constantly developing paint factories, has become a big consumer. Until within recent years, white lead could only be procured from English or American producers, in the latter case the raw material being often supplied from the mines in this country, and reshipped back in its corroded shape. But the development of lead production, however, and the growing demands of the country rendered commercially feasible the promotion of corroding plants in Canada. The Government a few years ago was asked, therefore, to grant further protection than the 5 per cent. duty on dry white lead in powdered form then prevailing. It was pointed out that with the great command that foreign manufacturers had of the field, the 5 per cent. duty offered no encouragement to manufacturers or capitalists to invest their money in a corroding plant, and that in consequence the country was being denied a great commercial prospect, and a direct encouragement to the lead mining industry. When the consequent increase of the general tariff duty to 30 per cent., the British tariff being 20 per cent., a lead corroding plant was established in Montreal, and another one is now in course of construction.

There are many ways of manufacturing white lead, but the most modern one, and the one in use in Canada, is an improvement on the renowned Dutch process which has been in use for the past 200 years. In the improved method the pig lead is melted, and the liquid ejected into a room, being met at the same time by powerful blasts of steam which separate the particles so that they fall to the floor in finely granulated form. This is picked up by carriers, and conveyed to the corroding room. Here a series of revolving drums are charged with the powdered lead sprinkled with dilute acetic acid and carbonic acid gas, produced from coke, then introduced into each drum. The revolving process thoroughly shakes up the granules and allows the acid and gas to corrode each particle. The treated substance is then dropped through trap doors on to cars, and transferred to the washing room. Here it is thoroughly mixed with water, and passed over water-filled separators to the bottom of which any uncorroded, or crystalized lead sinks—this uncorroded substance being afterwards manufactured into red lead. The corroded lead is then rewashed, and mechanically shaken up in tanks, where aided by a small amount of soda, all traces of acetic acid are removed. A further washing is given, and it is deposited into drying pans heated by steam, and quickly dried. It is then packed in barrels, and is ready for shipment to users of dry white lead.

At the paint factory the white lead is put into a mixer with pure linseed oil, and ground. It then passes through a mill with sets of rollers, is thoroughly worked up, and emerges in a state to be used as a basis for paint preparations.

It cannot be said that lead workers of to-day are free from the poisonous effects which used to decimate those engaged in lead preparing in the Old Country and elsewhere. But with the care now exercised, the danger of poisoning has greatly been mitigated. The use of respirators, the cleanliness of hands and skin surface, and the various medicinal preparations to eliminate the poison from the system, have made the industry one of much less danger to those engaged in it.

About Goods Hardwaremen Handle

Hall Marks on Silverware—Sample Rooms for Builders' Hardware—Bargain Departments in Basements—Profits in Cut Glass—Cater for the Trade of the Hunter.

BUILDERS' HARDWARE SAMPLE ROOMS.

The excellent results attending the setting up of a builders' hardware sample room in a store can only be fully appreciated by those who have instituted such a department, or have had an opportunity of seeing one in operation. It is a fundamental fact that the merchant who arranges his stock in a systematic manner, groups varied lines that are allied to each other into departments of their own, possesses an overwhelming advantage over the man who utterly ignores system, and lays out his goods in a haphazard manner. With the thousand and one articles that a hardware merchant has to carry, it is only by a careful disposition of his stock that he can avoid a confusion that militates against the selling power of the business, causes a customer to lose his temper over unnecessary delay, and marks the whole organization as ineffective. It is just as easy, and need be no more expensive, to arrange a stock in sections, as to have one article at this end of the store, and another, which probably would be wanted at the same time, at the other end, or on the floor above. System is half the battle, although many merchants fail to recognize this salient fact.

In no branch of the industry are the advantages of departmental allotment more obvious than in the case of builders' hardware. Here there are lines which need collective display to show off to best advantage, while at the same time, especially in the case of the better class article, they lend themselves to the attractiveness of a store. Effectively arranged, different designs in brass bronze or steel escutcheons are most pleasing in appearance, thus serving a useful as well as ornamental purpose. Looking at the two main features—the greater opportunity for making a good sale, and the saving of customer's time and the merchant's as well—there can be no question as to the obvious advantages of a builders' hardware sample room. A client who wants a complete line naturally objects to walk from one end of the store to another, maybe upstairs and down again, before he has purchased his set. Locks here, butts somewhere else, flush plates in any odd corner. It is apparent how the stock must become disordered in the process, and how wearied both salesman and client.

Builders nowadays are buying better class articles, and as a natural sequence they take more care in the selection of their sets. The artistic point of view has come in and this demands a grouping together of the various lines, so that the purchaser can select with best judgment the particular style he may have in mind. Then again by a complete and connected display the merchant may induce the sale of a better class line, besides giving the customer a good idea of the stock carried, which is a valuable advertisement. For the extra expenditure involved a builders' hardware sample room soon pays for itself. It is true that the project necessitates some curtailment of store space, but not to the extent that many criticizers seem to think, and whatever disadvantage there may be on this account is more than compensated for by the returns.

Section of Builders' Hardware Sample Room.

It is not necessary to interfere with the general aspect of a store by the erection of a room in any particular place. A few yards of low, ornamental wooden railing enclosing a certain amount of wall and floor space are all that is required. The location can be made in any part of the store where there is good light and where the whole sweep of the interior is not affected. Either side of the store by the entrance doors makes a splendid site, as the projection of the rails does not interfere with the walking space to the extent it might in other positions. Besides the ornamental aspect of the room strikes the notice of a customer entering the store, and gives a tone to the whole interior. Inside the space screened off can be placed a table and a chair or two, preferably in mission style, which will give the enclosure all the semblance to a room that is required. Against the wall space can be fixed cupboards and drawers in wood to match the furniture.

This arrangement, however, depends entirely upon the plans the merchant has conceived. He may have thought out something entirely novel, if so let everything be in quiet taste, and the woodwork severe in color, as by this means escutcheons are displayed to the best advantage. One feature of having the cupboard design is that the exterior of the doors can be fitted up with the most striking knobs and fittings, giving a good idea as to how these articles would look in a residence, and at the same time helping to make the room attractive. Inside the cupboards and drawers can be arranged locks, butts, etc. With a little forethought in planning, the whole arrangement of such a room need not take up much space. Builders' hardware is an important part of the hardware industry. It has now to be handled—especially as the designs are becoming more elaborate, and builders are paying more attention to the lines they put in—as a department of its own. The merchant who realizes this and establishes a sample room, will find that he is well repaid for his trouble and expenditure. He saves his stock, spares his client much unnecessary annoyance, and what is better still, displays his stock to the best advantage and adds to the attractiveness of his store in the bargain.

SEWING MACHINES AS SIDE LINE.

A good line for an aggressive hardwareman to handle is the sewing machine, and if a store is situated in a country town or village, it is never hard for a reliable merchant to have his business made the local agency for a good machine.

There is a good profit to be derived from the business but dealers must not

imagine that a machine will sell itself as a sewing machine in a hardware store is as yet distinctly a side line.

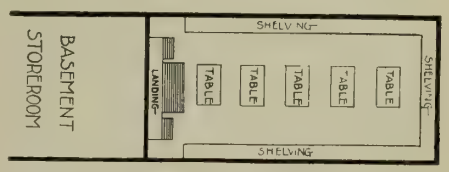
To successfully handle machines it is important that the dealers should study the strong points of the line carried, and also the weak ones of other makes and should have some of his clerks learn how to handle the machine. This requires time and patience but when once understood it is an easy matter to teach your clerks the ideas that you have studied. There is money in handling the machines. Western dealers carry them generally and if price cutting is not indulged in the business will show handsome profits.

HUNTING GOODS IN STORES.

With the development of the sporting instincts of the country, stimulated by the increased facilities which now exist for indulging in hunting, and the growing number of shooting meets and rifle club organizations, the handling of rifles, ammunition, and accessory articles, is becoming a more and more profitable branch of the hardware trade. Although many merchants realize this, it is doubtful whether the advantage of catering to, and of encouraging the demand, is generally recognized to the extent it should be. There are very few districts in the whole of Canada, if there are any, where the sporting proclivities of the country are nil, or where there is no opportunity for taking part in one of the most fascinating of sports. Most men have ingrained in their nature the great characteristic once ascribed to the British nation by a captious foreign critic, of always desiring to go out and kill something, and Canada offers facilities for sport which no other country can surpass. The hardwareman here has an opportunity which he should not neglect.

A demand strong enough to warrant a store carrying complete lines may not apparently exist in any particular location, but it must be a very exceptional place that offers no opportunity for the dealer to stimulate a profitable call. The days are gone by when a merchant simply sat down, and waited for trade to come to him. He must go out now and capture the trade. There are various ways whereby a dealer can make rifles and ammunition a most profitable department of his store, even though he may not be located in a great hunting district, or in a jumping off place for them. He can attend the nearby shooting meets, and get acquainted with possible clients. He can introduce to them a particular rifle and ask the members to try it and express their opinion as to its capabilities; distribute a few samples of ammunition for trial; or show a shooting accessory which may be unknown to the competitors or their friends. If there is no such meet in existence he can endeavor to fan local enthusiasm into forming one. In country districts where amusements are few and far between, it is astonishing how popular such an organization becomes. Rifle and revolver clubs too, are getting increasingly popular throughout the country. Here there are possibilities likewise, of which the progressive man should not lose sight. He can with a little ingenuity take a leading position in the conception of such clubs, and kill two birds with one stone by creating a demand and at the same time advertising his wares.

If a dealer wishes to carry rifles and ammunition with profit—and they can be carried with good profit—he must not only foster the demand by going outside his business premises, but he must have effective window displays. To keep the lines hidden away in a dark corner of the store, is to turn profitable articles into dead stock. Rifles, revolvers and ammunition help in the attraction of a window even though the hunting season may not be at hand, and there is this advantage that their employment will continually direct people's attention to the fact that such lines are carried. Then of course in the spring and fall, full window displays can be made. It is not necessary for a dealer to carry a wide range of guns. The more expensive grades can be selected from catalogue, and expressed at once from the jobbers. At the same time he must carry sufficient lines to make a creditable display, and what is equally important he must keep up the quality of his goods. An inferior article will kill all chance of a repeat order. If the mainspring, or any other working part of a gun fails to do its duty, as is likely in the case of a low grade article, the purchaser of the article will not only discredit the store, but will prejudice his friends likewise.



The profit to be made on rifles and other hunting goods, make them one of the best lines the hardwareman can carry. Staple lines of hardware have been so cut that the profit in many cases has been reduced to a minimum. This is not so in the case of hunting goods, and the dealer will find it well worth his while to make them one of his strong business planks.

Cartridge belts, canvas clothing, gun covers, also give profitable returns. There is one mistake which dealers often make, and it is an expensive one, too, and that is in ordering coats and vests, they specify a size that is too small for practical use. A hunter does not want a close fitting coat, and the dealer is well advised who does not go below the 38 inch size in ordering. Smaller than this the line will probably become dead stock. There is another point which should not be forgotten, and that is to pay careful attention to the care of weapons. Each time a gun is handled in a store it should be carefully wiped. Finger marks soon create rust, and no customer would think of buying a weapon that is not as bright in appearance as it was when turned out of the factory.

BARGAIN DEPARTMENT IN BASEMENT.

The accompanying cut shows a very satisfactory arrangement for a bargain basement measuring 25 ft. by 50 ft.—half of a basement under an average store, the other half being retained for regular storage purposes. The shelving is designed to be 5 ft. 6 in. high, with a 30 inch base, two shelves 15 inches wide and a top shelf 5 inches wide. The tables are designed to measure 4 ft. by 8 ft. No counters are suggested. Thus wide aisles are secured and customers can easily examine the goods.

The stairway is planned to be a wide one leading down from about the centre of the floor above to a landing, where a turn may be made to other stairs

Bargain Department in Basement.

leading from either side to the basement floor. Such a stairway has many advantages. To get to the bargain basement a customer must pass through the front half of the floor above, where attractive displays can be arranged to compel attention as the customer passes. Down the stairway itself other attractive displays can be made. Then when the customer turns on the landing he gets a view of the entire basement which, with proper lighting, cannot fail to be impressive.

In lighting any basement use natural light if you can get enough of it. If not use plenty of artificial light. But don't combine the two. If you do that the natural light will certainly make your artificial light look sickly and the appearance of your basement as a whole will be harmed.

The goods on tables in a basement arranged as suggested by the cut can be varied. On the table nearest the stairway one day can be shown one class, and on another day another class of goods. It would also be well to change the arrangement of the goods on the shelving. Very minor changes in arrangement will help to suggest what it

is worth while to have your customers believe—that there are always new things to be found at your store.

INVERTED LIGHTS POPULAR.

A remarkable development of the lighting business during the past couple of years has been the introduction and rise in popularity of the inverted light. One of the largest dealers in lighting supplies in Canada stated to Hardware and Metal last week that his business in inverted gas mantles during the past year had been 20 per cent. greater than the upright mantle lights. This is surprising, in view of the fact that tens of thousands of Welsbach and Lindsay lamps had been sold in previous years and in the natural course of events the supplies for these in the form of new mantles, globes, etc., would account for a large volume of trade. The lesson is that the public is always willing to buy something new and discard what they consider out-of-date.

SILVERWARE AND CUT GLASS.

It is apparent from the larger displays that retail merchants make of fancy goods at Christmas time that they are beginning to realize the advantage of branching out into lines which at one time were considered foreign to their trade. Slowly it is dawning upon them that there are other other fields to conquer besides those primary ones which gave life and growth to the great hardware industry as we see it to-day.

This is the age of development. The grocer has devolved into a wine merchant, the butcher into a fruit and vegetable merchant, the departmental store and mail order house into a gigantic octopus of many trades. On every side there are indications of one industry cutting into another and reaping an advantage therefrom. And yet, in spite of such proofs before him of the value of liberal methods of trading, the hardware merchant has been slow to depart from the traditional lines of his industry. The hardware store of to-day is in many cases the hardware store of the previous generation—a solid, sombre, phalanx of household utensils and tools. And yet there are many lines, as the progressive merchant is beginning to demonstrate to his more conservative brother, which can, with the utmost advantage, be introduced and carried as stock articles.

For instance, take the case of fancy goods, and more particularly silverware and cut glass. It is true that many stores now carry these lines at Christmas, but in the majority of instances only for this season. The articles which gave the counters and windows such a bright and attractive appearance and were such a valuable advertising medium, to say nothing of the extra profit, are wrapped in tissue paper and put away in a drawer or case, until December comes round again. But there is neither sense nor reason in this procedure. Silverware and cut glass are in demand at other times besides Christmas. If a hardware merchant can sell them at one time of the year—as it has been proved that he can—he should be able to do the same at another time. Hardware merchants in the Old Country, in Australia and in New Zealand, or ironmongers as they are generally termed, display plated hollow ware all the year round. It is a recognized important part of their stock. If such is the case in other parts of the empire, why not here?

There is no disguising the fact that the profit to be derived on these articles is much greater than on most of the staple hardware lines. Price competition has cut deeply into the revenue of the merchant. His expenses are heavier than they were, say, 10 years ago, but his profits are smaller. He cannot get the price for his goods that he did when his store was the only one in the district, or before the mail order house commenced to compete with him. It is imperative that he should seek for more profitable lines, and there is no reason why he should not make silverware and cut glass two of them. A merchant will drive several miles and spend much time in selling a farmer a quantity of nails upon which he gets little or no profit, whereas if he used that effort to sell a plated teapot, butter dish, or similar article, his turnover would be greater, and he would have helped to that extent to encourage a new demand. If the wife of farmer so-and-so displays a plated teapot, her neighbor will assuredly follow suit.

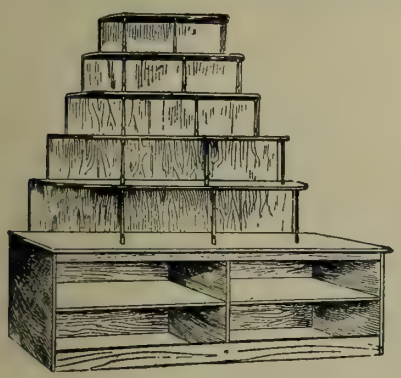
It is not necessary for a merchant to stock an expensive line of goods—at any rate to start with. Durable, good-looking, Britannia metal plated ware can be secured at a good profit bearing price, and yet the articles would be within the reach of most pockets. The conservative man may say that there is no demand in his district for plated ware. How does he know until he has tried? And not by an odd article here and there, but by a good display of a good assortment. Let the merchant show that he means to make his new department a success, and the customers will come along. But he must buy in profitable quantity, and must make no half hearted attempt to sell. Taken up in a thorough way, a silverware department should prove a valuable business asset.

There is another point in connection with the carrying of silverware and of cut glass, and this is the valuable help that these lines should be in making the store clean in appearance and attractive to the women folk. The days are fast disappearing when the merchant sees no need to pay attention to the state of his counters, shelves and floors. A man would probably buy a household utensil if it were thickly coated with dust, but not so a woman—and it is the latter who do most of the buying nowadays. Therefore the merchant must take increasing care of the appearance of his store. The more attractive it is, the more he will appeal to his customers. He may sell better goods than his rival—presuming that he has one, and most have—but if his windows and store are less clean and enticing than his competitor's, then he loses caste in the eyes of his women buyers, and his trade will suffer, to the advantage of the other man. Excite the interest of a woman and her trade is commanded. No lines could be more helpful in brightening a store than silverware and cut glass, and no lines could more strongly appeal to a woman. By showing a pretty plated tea set, or selling a butter dish, the merchant may hold out a magnet which may sell a $30 cook stove, or create a regular customer.

NOVEL SNOW SHOVEL.

A snow shovel of simple design is herewith illustrated, which operates somewhat on the principle of a snow plow, so that the snow may be readily removed from the walk and thrown to one side in a continuous operation, whilve moving the shovel forward over the surface. The blade of the shovel is of such shape that it will pick up the

New Idea in Snow Shovels.



snow and deliver it to one side. In practice, as the shovel advances over the ground surface, it is liable to come in contact with obstructions, and in order to enable it to readily override such obstructions, the inventor has provided at the rear of the shovel blade a series of lugs, so that by rocking the shovel handle downward, the cutting edge of the blade will be lifted sufficiently to clear the obstacle.

DON'T HIDE YOUR GOODS.

Unless you want to invoice over and over again goods that do not sell, come as near as possible to showing everything you have. People nowadays buy a great many things on sight which they did not have in mind at all when they left home. They cannot buy on sight in your store unless they do see your goods. If you keep your wares way up near the ceiling in dust proof boxes, do not be disappointed because they stay there.

To the hundreds of novelties already on the market others are being added almost constantly and these are great sellers, particularly to women, when put out on bargain counters. On shelves these novelties can't sell, because many do not know such articles exist until they see them. But, put where they will be seen, hardware specialties for housewives are paying juicy profits to the 5 and 10 cent stores and also to many a hardware store handling these goods over bargain counters.

Don't let go unimproved the opportunity to make yours this profit-yielding trade of women through fear of los-

Shelving for Back of Store.

ing the men's trade you now have. The city department store, although its efforts are almost entirely directed towards securing the trade af women, still finds it possible to make departments of men's goods profitable. So you can gain women's trade without losing the men's trade you now have that is at all worth having.

Get your goods down, make looking easy, put price tickets on everything, make the whole store inviting. Get out the old goods, dust them off and clean them thoroughly and then put them where they will be seen by people who will be likely to want them.

Do not wait to be asked if you have a thing. Put it out where it shows—where the question will be answered before it is asked. And put a price ticket on it to forestall, too, that other question as to cost. Shelf hardware up too high to be seen becomes shelved hardware, and shelved goods are profit caters.

Put in as many specialties as you can successfully handle. Buy for cash and don't overstock or overbuy in any line. Incidentally, sell for cash, too. Or if you do give time include a 5 per cent. that can be given as a rebate in one form or another to those who do pay cash. Come as near as you can to showing all you have. Keep changing the display, for an atmosphere of newness is exceedingly attractive. Study your lines so you can talk them intelligently—so intelligently that your people will prefer to buy goods orally described by friends instead of goods pictures of which are explained in print by strangers.

The shelving shown in accompanying cut can be used to good advantage for graniteware, paints or similar goods. It makes a serviceable screen for the back of a store and behind it a counter for unpacking goods and storing unsightly parcels can be arranged.

CANADIAN CORDAGE INDUSTRY.

Although contending against many disadvantages, the cordage industry of Canada is making great strides. Well equipped factories are turning out lines that compare favorably with the world's best makes, while the consistent quality of the cordage is being recognized not only by domestic consumers, but by users in the Old Country and in the States. Many purchasers, attracted by low quotations of imported goods, have learned to their cost that in cordage the name does not always imply the material contained in the lines furnished by the importer. This is gradually resulting in orders that formerly were placed with outside manufacturers reverting to the Canadian factories, where buyers feel they can secure the best value and be assured of the consistent quality of the goods.

Statistics show that with the exception of Russian and Italian, there is an average supply of all raw materials used for cordage and twines. Remote as it may seem to be, any disturbance in the Pacific or Indian Empire, the sources respectively of manila and jute—the two greatest factors in the world's hard and soft fibre supply—would quickly be reflected by advancing prices. Therefore, though supplies appear plentiful, the fibre market is, and has frequently shown itself to be peculiarly sensitive.

It is argued that cordage and twine makers in Canada would greatly be benefitted by the revision of the following conditions which now obtain :

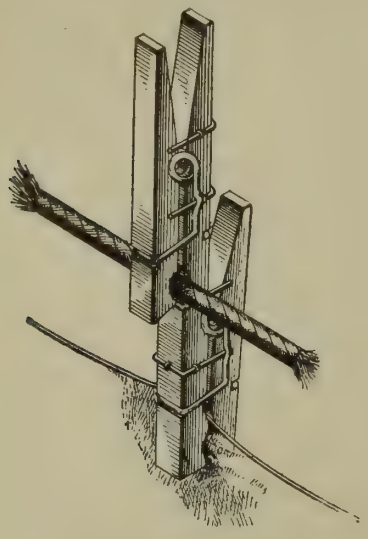
1. The free admission of binder twine into the country. At the present day Canadian mills, which make the best average twine in the world, can more than supply the total domestic demand.

2. The free listing of cordage for lobster fishing. In this case it is said to be doubtful if the intended-to-be-favored fishermen derive much benefit from the arrangement, as they are not in a position to buy for cash. The advantages seem to be on the side of the foreign manufacturers looking for catch trade.

3. The manufacture of cordage and binder twine by prison labor.

4. The British Preferential Tariff. This permits the importation of low grade cordage. It is contended that British manufacturers are great users of low value fibres—New Zealand and cheaper goods—and make a custom of offering such cordage under the name of "manila."

5. The free importation of hemp yarns. These yarns could be made in Canada to the great stimulation of the native grown flax fibre.



With some measures remedying these factors, which it is contended, strongly act against the manufacturing of cordage and twine of all descriptions in Canada, the factories would have greater scope for their energies.

In January of last year all varieties of roping fibres were at their highest, but after that they declined steadily throughout the twelve months, jute and sisal late in the year touching lower values than they can be secured today. Less cordage was required for agricultural purposes, the free listing of rope for lobster fisheries also curtailed sales, while the light harvest necessitated many carrying over unsold binder twine, though there would have been no surplus had the demand been normal. The close margin on which binder twine is handled makes such a condition far from lucrative, particularly on a falling market. At the present time, with but few exceptions, fibre values are lower than last spring, though some have recovered from the lowest prices touched, and a further advance is not unlikely. The demand for cordage, as is usual at this season, rules quiet, but the breaking up of the severe winter will undoubtedly stimulate business, especially as cordage and binder twine prices are now lower than at any period in 1907.

The Collingwood Hardware, Limited, has purchased the retail stock and business of White's, Limited, and removed it to two new stores on the other side of the street several block further south. The Collingwood Hardware, Limited, is controlled by W. D. White, Frank Gregory, R. H. Breeze and C. B. Adair, none of the members of White's, Limited, being interested in the new company in any way. White's, Limited, will confine themselves exclusively to the wholesale trade, their travelers covering Northern Ontario.

NOVELTY IN CLOTHES PINS.

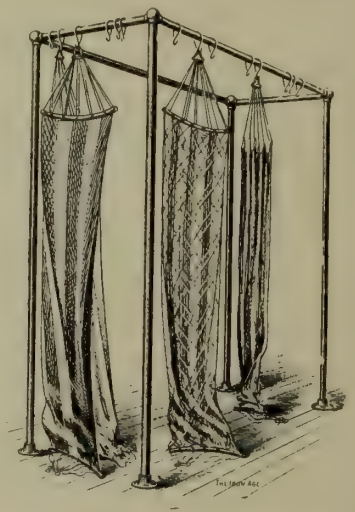
A clothes-pin which will support the clothes without the necessity of engaging them with the line, and thus prevent them from freezing fast to the line in cold weather has been invented and is shown in the accompanying illustration. It will be observed that the improved clothes-pin consists in reality of two clothes-pins, one of which is adapted to grip the line, and the other, the clothes. In winter weather it will be found an advantage to attach the clothes-pins to the clothes before taking them out of the house, after which they may be quickly and easily engaged with the clothes-line.

A Novel Clothes-Pin.

It's a pretty good plan to keep good friends with the salesmen selling your house. There's many a good business suggestion stored away in their systems.

MANTELS AND TILES.

Mantels and tiles are used in every modern residence, and are a line of builders' hardware which has been made a successful sideline by many hardwaremen. If the larger dealers in the big centres can afford to send men to small towns for the purpose of setting up a mantel at a total cost of from $50 up, there must be a good profit in connection with the business and the line might well be taken up by the dealers in the smaller cities and towns.

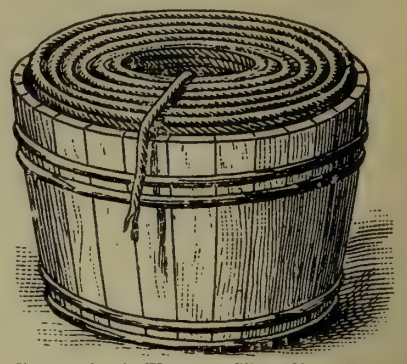


The tile business in this country has trebled in a period of ten years, and at the present era of improved sanitary conditions all large hotels, public and office buildings, etc., are fitted up with tiled floors and walls. They are also growing in popularity in private residences, in fact, each year sees them more and more taking the place of oilcloth for vestibules, halls and kitchens.

The most popular lines handled in Canada are imported from the United States and England. Mantels and grates are also imported in some cases, but the majority are manufactured in Canada. To set up a mantel fitted with a combination coal or wood grate costs from $50 up, and as almost every residence built in recent years has at least one mantel, the possibility of making a substantial increase in the yearly turnover may be readily perceived.

The dealer in the small town who takes up the line should purchase a couple of mantels with fixtures or get the agency of one of the large importers. Handled in the latter way there is a profit of twenty per cent. or more on most lines which might easily amount to a neat sum in a good season. The tiles alone offer a profit of from fifteen to twenty per cent. handled in this manner, or if a good assorted stock is carried, the margin of profit will increase to from twenty-five to thirty-five per cent. clear.

HAMMOCK RACK.



A hammock rack, which has proved a splendid arrangement from which to sell hammocks, is made of 1¼-inch gas pipe, high enough so that the longest hammock can hang from the top of the rack and not touch the floor. The rack shown in the illustration holds about six dozen hammocks and any one can be shown by taking hold of the lower end and drawing it out a little.

Rack for Displaying Hammocks.

HANDLING COILS OF ROPE.

Placing a coil of rope in a tub or a barrel cut down to proper height, as shown in the accompanying illustration, keeps the coil in better shape than when unsupported, and permits moving the coil about, even after most of it has been sold, without its falling down or becoming tangled. Coils of rope standing on the store floor or in the basement are apt to become dirty and present an unsalable appearance. By keeping them in a tub this is prevented.

Convenient Way of Handling Rope.

Hardware Letter Box

Any questions on trade subjects will be answered by the editor in this department. Do you want any address, any special line of goods, anything relating to the hardware trade? Ask us. Letters from manufacturers, jobbers, travelers, retailers or clerks are solicited. Suggestions for trade improvement or discussions on trade evils are invited.

Cuts for Advertisements.

The Waseca Hardware Co., Waseca, Sask., ask where small engravings for illustrating advertisements, such as are used by the Russil Hardware Co., Toronto, can be obtained.

The Iron Age, 14-16 Park Place, New York, can supply a large variety of small engravings, while the National Hardware Bulletin, Argos, Ind., can supply larger cuts of a similar nature. The Toronto Engraving Co., Toronto, can supply cuts on order, but do not carry a stock.—Editor.

Buying a Hardware Stock.

A prospective hardware merchant in a Western Ontario village writes: "Will you kindly inform me what discount I should obtain from the cost price of stock in buying out a small hardware establishment with an approximate annual turnover of $9,000?"

No definite answer can be given to this question. Every case must stand by itself, the local conditions, the condition of the stock, etc., making impossible the adoption of any general rule. In a live, progressive town, with a good mechanic or farm trade, if the stock is thoroughly up-to-date, as much as 90 per cent. should be paid, speaking generally. With conditions not so favorable, opportunities for trade more limited, and stock containing some out-of-date lines, the seller might find it hard to secure more than 75 per cent. The general condition of trade would also be a determining factor to be considered.—Editor.

HARDWARE TRADE GOSSIP

Ontario.

G. H. Clark & Co., Niagara Falls, Ont., are remodelling their store front and enlarging the rear of their store.

S. L. Adolph, of Adolph & Bonnett, Listowel, Ont., was a delegate to the A.O.U.W. convention in Toronto this week.

J. E. Trelford, Markdale, Ont., has sold his hardware and furniture store to Jeffrey Artley, of that place, who will carry on the business in future.

D. Cinnamon, Lindsay, was a visitor in Toronto this week on his way to London to attend an executive meeting of the Council of the Woodmen of the World.

N. L. Stewart, formerly manager of the Guelph Stove Co., Guelph, has opened offices at 178 Victoria street, Toronto, where he has samples of Fabien refrigerators and Findlay Bros.' stoves on display.

The following out-of-town jobbers attended the regular quarterly meeting of the Canadian Wholesale Hardware Association in Toronto on Tuesday; T. H. Newman, W. Starke, A. Jeanotte and C. M. Strange, Montreal; F. H. Alexander, Hamilton; D. H. Howden and C. A. Whitman, London.

Bowes, Jamieson & Co., Hamilton, have made a change in their Western agency at Winnipeg, formerly in charge of W. A. Templeton. In future the Tilden-Gurney Co., Winnipeg, will look after the entire territory from Fort William to the Pacific Coast.

A change in the management of the Connor Hardware Co., Mildmay, took place this week, when two new partners, Peter and Edward Liesemer, were admitted into the business. The firm name has also underbone a change and in future will be known as C. Liesemer & Co.

The Aylmer Iron Works Co., Limited, Aylmer, which recently went into liquidation, has been purchased by S. H. Chapman, of the Wind Engine & Pump Co., Toronto. The Aylmer works are being put in shape with all possible speed and Mr. Chapman expects to have them in operation in about two weeks. The manufactures of the Aylmer branch will include pumps, scales and trucks.

O. M. Hodson, for the past two years Toronto representative of the H. R. Ives Co., Montreal, has resigned his position in order to establish a manufacturers' agency at 80 Victoria St., Toronto. Mr. Hodson is well known to the retail trade throughout Ontario on account of his work as organizer for the Ontario Retail Hardware Association and his experience as retailer and jobber fits him to make a success in his new line of work.

Rice Lewis & Son, Toronto, are remodeling their sporting goods sales department as well as making some other changes in the stock shelving. They recently enlarged their wholesale department offices, the various changes all tending to improve the working of the store staff. The establishment of a metal warehouse on Atlantic Avenue, near the Exhibition Grounds, has also given the firm larger space in the warerooms in the rear of the store.

William Harland & Son, the celebrated English varnish manufacturers, have decided to open a branch factory at Toronto, they having purchased the plant of the Victor Varnish Co., corner of Eastern avenue and Strange street, Toronto, the consideration being in the neighborhood of $15,000. Wm. Harland & Son are one of the oldest and largest manufacturers of varnishes in Great Britain. They have been in business for 125 years. The intention of the firm is to open a factory in the United States also. They will continue their warehouse at 95 King street east, Toronto.

Quebec.

Alexander Lewis, London, Eng., has been appointed manager of the Canadian branch of J. W. & T. A. Smith and W. J. Cowan & Sons., Limited, Old Ford Road, London, Eng., manufacturers of pulp colors, dry colors, satin white, art enamel, etc. Mr. Lewis combines a thorough knowledge of the business with the polite and aggressive qualities so necessary to a successful salesman and with the reputation which Cowan & Sons already have here should doubtless build up a considerable trade for them.

It is very likely that a new can factory will be established in Montreal. Representatives of the American Can Company have been on a visit to the city, and they have decided that it would make an excellent location for a factory. They have decided to recommend to their company the erection of a can factory in Montreal to cost from $200,000 to $250,000, and to be equipped with modern tools and appliances for the manufacture of cans. In all probability work on the building will be started as soon as a suitable site can be found.

Western Canada.

Hays Bros. have bought the hardware business of G. L. Vrooman, Lethbridge, Alta.

C. D. Waldon, of Pease-Waldon Co., Winnipeg, is at present on an extended business trip through Saskatchewan and Alberta.

H. McLean, hardware merchant, Cartwright, Man., has disposed of his business to McGillivray & McLeod, and has, with his wife, left for Winnipeg, where he will reside in the future.

Hill & Nordal, West Selkirk, Man., who started business a year ago, are extending their premises and installing a modern plant for general plumbing and tinsmithing.

United States.

Theodore D. W. Moore, who has lately been appointed general manager of the Savage Arms Company, has had a wide experience. For twenty-seven years Mr. Moore was interested in the ammunition firm of Hartley & Graham, and after the company's name was changed to the M. Hartley Company, Ilion, N. Y., Mr. Moore was appointed manager. The last mentioned company is the concern making the Remington rifle at Ilion.

TAKE OUT CANADIAN CHARTER.

The Sherwin-Williams Company, Montreal, paint and varnish makers, have taken out a Canadian charter for their business in Canada. Under the Quebec Companies Act, 1907, letters patent have been issued incorporating Walter Horace Cottingham, and Sereno Peck Fenn, both of Cleveland; Charles Colquhoun Ballantyne, James Hartley Gordon and William John White, all of Montreal, for the purpose of acquiring the business carried on in Canada by the Sherwin-Williams Company, of Cleveland, operations to be transacted under the name of "the Sherwin-Williams Company," with a total capital of $500,000, divided into 5,000 shares of $100 each.

In answer to an inquiry, the Sherwin-Williams Company state that the reason for taking out a Canadian charter for their business in Canada was simply to Canadianize their large interests in the country. This would have been done before had it not been for the fact that only recently legislation has been such that the company were enabled to take out a charter without adding the word "limited" to the well-known name of the concern. This objection having now been overcome the company were only too pleased to take out a Canadian charter. The name of the company will remain the same in Canada as it is in all other parts of the world where they are doing business.

REMOVING TO ENGLAND.

Mr. F. D. Benjamin, of M. & L. Samuel, Benjamin & Co., wholesale metal merchants, Toronto, left Toronto this week to take up his residence permanently in London, England, where he will be associated with Mr. Jack Samuel, who has managed the English branch of the firm's business for a number of years. The Toronto business will be in charge of Mr. Sigmund Samuel.

During his twenty years' residence in Canada Mr. Benjamin made a great number of friends, and on his departure he was the recipient of many handsome gifts. The congregation of the Holy Blossom Synagogue, of which he was the president, presented him with one of the most magnificent specimens of the goldsmith's art ever produced in Canada. The Queen's Own Rifles in which Mr. Benjamin held the rank of captain, presented him with a loving cup and other societies also made presentations.

The firm with which Mr. Benjamin is connected have been in business in Canada for over fifty years. The erection of their magnificent new building at the corner of King Street and Spadina Ave., Toronto, is proceeding rapidly, and they expect to occupy it by midsummer.

Markets and Correspondence

(For detailed prices see Current Market Quotations, page 152.)

MARKETS IN BRIEF.

Montreal.

Pig Iron—Firm.
Tin—Showing strength.
Copper—Firmer.
Spelter—Unchanged.
Lead—Cut to $4.
Shovels—Again 45 per cent.

Toronto.

Pig Iron—Prices being shaded.
Tin—Continues firm.
Copper—Unchanged.
Lead—Weaker.
Shovels—Open market over.

THE MARKET OUTLOOK.

Although there may not be at the present time such a boom in trade generally as was experienced in March last year, yet business conditions are good, and what is better still, show signs of great promise. The late depression has naturally tended to keep things back somewhat. Tightness of money, hard times talk, and undue nervousness as to the future, are bound to have a retarding effect upon the commercial transactions of any country. Consumers have limited their purchases, dealers have held back their orders to see how affairs would shape, while jobbers and manufacturers, in consequence, have been correspondingly affected in their operations. But all this uncertainty is being dispelled by the vigorous breath of common sense. Alarmists, confronted on all sides by renewed evidences of prosperity, and of coming great development, have had their fears quieted; while the quicker circulation of money is tending day by day to open the purses of the consumers. The remarkable way in which vast loans have been over-subscribed in the English market at easy percentage, shows how capitalists view the situation, and traders generally could have no better or truer barometer than confidence displayed by outside investors.

This year will see a great development in railway construction. Many hundreds of thousands of dollars are to be spent in this direction. Armies of men will be located in various parts, adding day by day their quota to the development and prosperity of the country, and spending their wages in domestic products. This year, too, will see a vast acreage of virgin soil contributed to the grain area. New land will be taken up by settlers, and not by speculators, for the latter have been happily checked in their operations by the crash of last year, The outlook is full of promise. The industrial scope of the country is greater than ever, capitalists see in Canada a good field for the investment of their money, and magnificent development is at hand.

The hardware industry should be among the first to benefit by this development. Although spring hardware orders are late in opening up, for reasons which we have already stated, they are increasing in bulk now every day, while inquiries are most encouraging. There is no reason why the average for the twelve months should not surpass those of other years, even though the start has not been so favorable. Last year's returns, despite three months of depression, came close to, if they did not exceed those of 1906. Three months' leeway now can just as easily be made up by the remaining months of the present year. It is evident that the consumptive needs of the country cannot be restricted for long, and in the developing extent of these needs, the hardware industry can forecast its coming good trade.

The metal markets are somewhat similarly placed, inasmuch as they are likewise feeling the effects of restricted buying. Metals are very low, compared with a year ago, and the demand is poor. But encouraging signs are observable here as in hardware. The industrial activity opening up cannot long be maintained on hand to mouth purchasing. Consumers must soon come into the market freely, and then will come the turn of the tide.

There is no need for doubt as to the prospects of trade. Granted business is slow in starting, but it will gather impetus as the spring opens, and at the end will travel all the faster for the check at the commencement. The year will yet show alarmists the folly of being frightened at shadows which at various times are cast across all countries no matter how fundamentally prosperous they may be.

MONTREAL HARDWARE MARKETS

Montreal, March 17.—Although fair trade is moving and orders for future delivery are showing every day a gratifying improvement in number and bulk, the high water mark set in March of last year has not been reached. At that time the reflex of a banner year was still being felt. Prices were high, retail merchants with no thoughts of depression to make them unduly cautious, purchased freely and placed their orders early, with the result that manufacturers and jobbers were shipping from the early days of the year. In fact the wheels of commerce were traveling at the rate set in 1906.

This year trade conditions have been struggling against a great disadvantage. The depression of the latter part of 1907 gave the commerce of the country a jolt, the effect of which lasted some time and proved hard to overcome. Retail merchants, scared at the prospects of hard times, have not only been slow to place their orders, but have been most cautious in their buying. Jobbers in their turn have been compelled to be more conservative in regard to the manufacturers and the effect all the way round has been to curtail business. But alarm as to the future is rapidly melting away. Confidence in the consumptive needs of the country, and in the circulation of money to pay for them—which should never have been lost—is fast returning, and the good effect is seen in the better tone that is being fast given to the demand, and the growing volume of business moving. This month is behind March of 1907, but that is no reason why 1908 should be behind 1907 in total trading. In fact, there is every reason why the coming months should surpass those of last year, providing the harvest turns out well.

Builders' Hardware and Supplies—These lines are keeping well up to the pace set in March last. It looked at one time as if, owing to the threatened shelving of many building propositions, the prospects would be far from favorable. But improved conditions all the way round have tended to restore the confidence of landlords, and reports from the East and Northwest show that building is opening up most encouragingly. In consequence all lines are moving well, and in increasing bulk.

Lumbermens' Supplies—The season is now practically over. Although the total trade does not compare with last year, owing to the fact that lumbering operations were curtailed owing to the financial stringency, yet taking all things into consideration the season's results have not been unfavorable. In fact, considering the disadvantages at the outset, there is every reason to be satisfied.

Railroad Supplies—Trade in these lines compares fairly favorably with the total moving last March, while the prospects, if anything, are more encouraging. An immense amount of construction work is contemplated, and the demand in consequence should be a record one later on.

Spring Goods—Orders are somewhat behind hand. Retail merchants have shown more hesitation in placing their orders than they did last year, but an encouraging movement has started within the last two weeks, and kitchen and household supplies and lawn and gardening tools are moving out well.

Bolts and Nuts—The scarcity in bolts and nuts which induced almost a trade deadlock in March last year is not in evidence this month. Makers late in the year were able to catch up with the shortage, and trade in this respect opens out much more advantageously this spring.

Sporting Goods—Prompt delivery was hard to obtain last year owing to the demand, but this state of things cannot be said to exist at the present moment. The demand is very slow to open out,

and except in guns and ammunition, there is very little doing just at present.

Screws — Although the shortage in various sizes of screws which characterized the industry last year does not exist now, stocks in some sizes appear none too heavy. Prices have maintained firmness, and indications point to a good year.

Nails—Nails this year have been characterized by considerable cutting, and a low price now obtains. The demand is fair, and if usual business opens out, there is little prospect of further cutting as stocks are light.

Shovels—The manufacturers have come together again and the old discount of 45 per cent. again prevails.

TORONTO HARDWARE MARKETS.

Toronto, March 20.—Jobbers agree that the trade of the past week has been greater than for several months. Throughout the country low stocks are assisting travelers to a large extent with booking and as a result orders are coming to hand in a satisfactory manner. Trade has not yet recovered to the extent of the same month last year, but, that business is again on a satisfactory basis is welcome news to the jobbers.

The feature of the market this week is a truce which has been called between shovel manufacturers. Building possibilities are also opening up.

Business is nearly a month behind hand at present as a result of the American financial depression, but there is every reason to believe that conditions will be so improved inside of one month that building will be started in earnest.

Shovels—The shovel situation has cleared up and dating from March 18 shovels are again at 45 per cent. off list prices. The reduction which has been enforced for nearly two weeks created the demand and as a result large numbers of retailers have laid in stocks which will be sufficient to supply an average demand upwards of one year.

Sugaring Supplies—Country dealers are buying fairly heavy this year in anticipation of a strong demand for these lines. Prices are firm and unchanged.

Spring Goods and Kitchen Ware—All lines are commencing to move as shipping received a start on March 15. All varieties of household goods are helping the movement, washing machines, wash tubs, churns, pails, wringers, etc., together with garden utensils, including lawn mowers, garden hose, tools, etc., are beginning to go out and though the heavy spring shipping is not due to start until April jobbers have commenced to ship orders dated April 1.

Mining Supplies—Though a growing and healthy demand exists at present, orders coming in are for much smaller quantities than at this time last year. Picks, shovels, crowbars, blasting powder and dynamite are moving freely and from the amount of development work and extensions at present being planned, there seems little doubt that a good, strong demand will exist for these goods all season.

Wire Goods—Wire netting and wire fencing are moving quite freely at present as a result of the proximity of spring. Large amounts of fencing are being booked and some shipments have already been despatched. Poultry netting has also experienced a trade revival as a result of last week's fine weather. Prices are firm.

Copper Rivets and Burrs—The cut chronicled in last week's report has helped to stimulate the demand, and orders are coming in more freely.

Wire Nails—Wire nails are in fair demand at $2.30 per keg of 100 lbs.

Sporting Goods—Spring business has not yet opened up among the retailers, and, as a consequence, business is quiet. A fair demand exists for oil skins and for shotguns at present. Rifles and ammunition are not showing much life.

TORONTO METAL MARKETS.

Toronto, March 20.—A big slump in metals has marked the past year, the following table showing clearly how great has been the change since the current week in 1907 :

	1905	1907	1908
Summerlee pig iron.	$20.00	$25.50	$24.50
Middlesboro No. 3 ..	21.00	23.50	21.00
Can. No. 2 foundry .	16.50	24.00	21.50
Bar iron	1.80	2.30	2.20
Ingot tin	.32	.45	.33
Bright coke plates...	3.50	4.25	4.25
Ingot copper	16.50	27.00	14.00
Sheet copper	21,00	35.00	21.00
Imported pig lead...	3.50	5.60	3.90
Zinc spelter	7.00	7.50	5.00
Antimony	9.50	27.00	10,00
Black sheets	2.70	3.00	3.00
Canada plates	2.50	2.90	2.75
Galvanized sheets ..	3.90	4.50	4.50
Boiler tubes	8.50	9.50	9.00

Last year with prices exceedingly stiff buying was very active and it was far easier to sell than to-day when prices are one-third or one-half the former figures on certain metals.

During the past four months the demand for iron, copper and tin has been only for small lots for present use and both copper and tin have experienced sensational declines. Iron has held firmer owing to reduced production in the States and the cutting down of stocks in Great Britain. Several Canadian furnaces have also gone out of blast and iron merchants are looking for an off year, being more content to do less business than cut prices. In the States there is talk of a slash in pig iron prices in order to stimulate buying.

Increased buying is reported this week and it looks as though April will be an active month. January and February totals were far below previous years, but March will, according to reports received so far, compare favorably with the same month in 1907. Conditions are are undoubtedly improving as spring approaches.

Pig Iron—Canada's sixteen blast furnaces had the best year in history, the production of pig iron from foreign ore being 537,803 tons and from domestic ore 95,911 tons, making a total of 633,718 tons, in addition to which 666,589 tons of steel and 68,736 tons of steel rods were produced. Merchants also had a good year, but with several furnaces closed down, imports from Great Britain very light, and few inquiries for business so far the volume of business in 1908 will not be so large. We quote: No. 3 English iron, $21, and No. 2 Canadian foundry, $21.50. Steel plates have been advanced 7½c per hundred in the States, and the old prices have been withdrawn here. Bar iron is unchanged at $2.20 net.

Ingot Copper—With prices about half what they were a year ago copper is in very little demand. The metal is in the hands of speculators and no confidence can be put in their movements. It is now said that the opening up of the copper smelters in Montana a fortnight ago was a move to boom stocks. At any rate it has not resulted in strengthening the market in any way, as while we quote 14c for casting ingots this price is being shaded locally in fair-sized lots. Last year the Toronto quotation was 27c. The base price of sheet copper in the States has been reduced from 20c to 17c a pound. On the high copper prices last year, sheet copper base was at the highest record—32c.

Ingot Tin—From 45c last March tin dropped down to about 30c early in 1908, but strong hands have secured control of the market during the past month and the price in Toronto is now 33c. Tin plates, Canada plates, black sheets and galvanized iron have all retained their strength and remain at practically the same prices as a year ago. Of all the metals tin seems to be the most likely to show the largest advance during 1908.

Lead—This market continues to weaken and this week we reduce our quotation to $3.90 to $4, a decided fall from the quotation of $5.60 in March, 1907.

Spelter—Like other metals, zinc spelter has declined materially, the figures of a year ago being 2½c higher than the present quotation of 5c for foreign. The market is weak at present, 4¾c being quoted for domestic.

Antimony—The most sensational decline of the year was that from 27c to 10c for antimony, the market being far from strong even at the present low quotation, which is a shade over the figures of three years ago, before the Russian-Japanese war.

Old Materials—With little demand for new metals, scrap has been a drug on the market for several months and local dealers report trade very dull.

MONTREAL METAL MARKETS.

Montreal March 20.—A comparison with the metal prices obtaining in March, of 1907, and those of the present week, shows how the markets have been affected by the decline that took place during the great slump at the latter end of the year. It was at the end of last March that the first signs of foreboding as to the future appeared. Mines and smelters were being worked at the utmost pressure, manufacturers were turning out the finished article as fast as machinery could perform the task, and stocks were accumulating on every side. The demand had then worked itself out, although it was not generally apparent on the surface. A great reaction fol-

lowed—a reaction which was intensified by the financial panic towards the close of the year. Copper, tin—in fact, all the metals with the exception of iron—made sensational declines. The markets are now trying to recover themselves, under a demand that is but a faint reflection of the demand that existed during the first three months of 1907. A great holding off in buying has been manifested, and orders have been of a hand-to-mouth character. Purchasers are coming into the markets more freely now, although the large consumers are keeping off the market, and prospects seem brighter than they did a few weeks back. Stocks are light, and when the demand opens there will be a big rebound. It is to be hoped that once the markets show a permanent turning movement, there will be no big inflation of prices. Stability is what is desired—a stability that will give confidence to buyers generally—and this will not be obtained by rushing the prices up.

Pig Iron—This metal has maintained strength all through. The English markets have been firm, and the restriction of output in the States helped to keep the situation steady. Although conditions in the Southern States are not so satisfactory as they might be, the position generally is very healthy. Inquiries from local consumers are assuming greater strength. Cleveland warrants are quoted at £51 3s., which is a slight reduction on last week. We quote: Middlesboro No. 1, $21.50; ex-store, with a shading for large quantities for import; No. 3, $20.50; Summerlee, $25.50.

Ingot Tin—The quotation in March last of $45 and the present local quotation of $34, shows the alteration that has occurred in the markets. At present tin is showing great improvement, and the high figures ruling in the Old Country and in the States—that is compared with the prices which have obtained since Christmas—are forcing up local quotations. Stocks seem to be light, and inquiries within the last week have been opening out well. Tin is being quoted on the English market at £139 15s., which is a big advance on our last week's figures, while the New York price is again stiffer, at 31c.

Copper—This metal in March last year was quoted at 26c, while it is now 14½c. The demand in copper seems to be very fluctuating, that is, what demand there is. One week the call strengthens, next week it weakens. At present the metal is slightly stronger again. The English market is at £59 15s., while the metal has firmed ¼c in New York. Apparently the smaller consumers are purchasing more freely than they were, but the large buyers are still conspicuous by their absence. We make no change in quotations.

Spelter—This metal is quoted at present at 5½c for foreign and 5¼c for domestic, while a year ago it was 7½c and 7c respectively, another good example of how the metal situation compares with that of a year ago. Spelter after the great decline was the first of the metals to show a steady improvement. This was probably due to some curtailment of production which took place in the States. The improvement fell away, but prices seem to be firming once more. Spelter is quoted in London at £21 17s. 6d., which is an advance of £1 on last quotation. East St. Louis quotations are around $4.70, with shading for second-hand lots.

Lead—The English market is very weak at present, and quotations are now at £13 15s., which is another decline. There is little doing in the way of buying, and we now quote imported pig at $4. This time last year it was $5.50.

Antimony—Antimony at 10c to 10½c is a drastic change from the 27c ruling last March. This metal is the worst offender, for the others have shown improvement since the first of the year, but antimony, for the present, seems down and out.

MONTREAL PAINT MARKETS.

Montreal, March 20.—Compared with a year ago, it cannot be denied that conditions of trade are not so good now as they were then. Last March prices were high, especially so in turpentine, and in every branch of the paint and oil industry there was the greatest activity. Orders poured in, and if other months had been relatively as good, the year would have been a record one. Trade fell off, however, and then came the depression at the end of the year—from the ill-effects of which business is now slowly but surely recovering. Grinders and jobbers are not experiencing the heavy volume and hurry-up orders of last March by any means, but trade is improving every week. Fair business is now reported in general lines, and although it has not the snap it should have at this time of the year, it has the merit of being progressive in character.

Turpentine—This time last year turpentine was bullish, owing to a corner in the South, and the price was around the dollar, but since then quotations have on the whole dropped steadily. Supplies have been fairly ample. At the present moment orders are not overabundant, but steady supplies are keeping the market from fluctuating. We continue to quote 72c for single barrels.

Linseed Oil—This article is slightly lower than it was in March last year. The highest price was reached in June, but it fell away from that time. Supplies have generally been good. A better call is now being shown for the article than for some time past. The market in the Old Country being low, with abundant supplies offering, has a tendency to depress quotations here. However fair shipments are moving, and we continue to quote last week's figures: Raw, 1 to 4 barrels, 55c; 5 to 9 barrels, 54c; boiled, 1 to 4 barrels, 58c; 5 to 9 barrels, 57c.

Ground White Lead—The depressed state of the pig lead market has affected ground white lead all the way through. With trade slack in the latter part of the year, and until recently, when there have been unmistakable signs of improvement, prices have ruled low and are away below those obtaining last March. A healthier demand is showing from the West, and there is no reason why prices should not firm up from now. We quote Government standard $6, No. 1 $5.75.

Red Lead—Red lead, until recently, maintained its firmness splendidly. Last year's March quotation of $6 bade fair to be carried right through, but the article has given way, since the commencement of this year under the low price of lead, and the market has been cut in consequence. The lower quotations have stimulated trade, and the following prices are, at present, firm: Genuine red lead, in casks, $5.50; in 100-lb. kegs, $5.75; in less quantities at $6.50 per 100 lbs.; No. 1 red lead, casks, $5.25; kegs, $5.50, and smaller quantities, $6.25.

White Zinc—All the year through white zinc, and white zinc ground in oil, have been devoid of interest. Prices have not fluctuated, and the demand has been fair. At present shipments are light, and local quotations are uninfluenced by the slight advance in the Old Country. We quote: V.M. Red Seal, 7½c; Red Seal, 7c; French V.M., 6c; Lehigh, 5c. White zinc ground in oil we still quote at: Pure, 8½c; No. 1, 7c; No. 2, 5¾c.

Varnishes—Varnishes have well maintained their strength throughout the year. At present conditions seem to be a little weaker than obtained some time back. The market in the States is said to be decidedly weak, and jobbers and holders of varnish gums over there are looking to Canada to unload. However caution prevails with all the varnish manufacturers. Slight cuts on individual lines do not seem to stimulate orders, neither have they affected the price of varnishes generally.

Putty—This article has been in good demand right through, and prices have been consistently maintained. The outlook appears to be fair. We continue to quote: Pure linseed oil putty, bulk, 800-lb. casks, $1.75; in 25-lb. iron drums, $2.05; in 25-lb. tins (3 in a case) $2.15; bladder putty, in barrels, $1.95.

TORONTO PAINT MARKETS.

Toronto, March 20.—Business in paints does not compare very favorably with that done during the same period last year, for various reasons. The retailers throughout the country are only preparing to receive orders dated April 1, this year, while the situation a year ago was such that jobbers generally began to ship goods for future delivery at the end of February. Then orders have been backward this year on account of the unusually bad condition of country roads which were blocked for weeks at a time, and, as a result, travelers were confined in limited districts for a period of time which has made booking several weeks behindhand to this date.

Trade is, however, gradually assuming something like spring proportions, and local jobbers claim that more goods have been booked and shipped during the fine weather, of the past week, than for any previous week during the last five months. The close proximity of spring

and a growing feeling of confidence, together with keen competition, are responsible for the trade revival.

Turpentine—At this time last year turpentine was quoted at from $1.00 to $1.02 per gallon, the market holding strong on account of a corner at the southern source of supply. The high price was responsible for a weakness in demand and about the same amount of turpentine was handled during February and March, of 1907, as has been shipped from this point during this same period this year. The minimum price paid for turpentine during 1907 was in December when single barrels sold at 70 cents per gallon. This was very low for that season, the figure for the corresponding month in 1906 being $1.00. At the present time there is a strong demand for turpentine for which we continue to quote last week's figures; single barrels, 73c, 2 to 4 barrels 72c.

Linseed Oil—The price of linseed oil was strongest during 1907 on May 17, and for a week in the middle of July, when raw oil was quoted at 70c per gallon. There was a strong demand at the time for the product, but the price did not hold in either case for more than a week. At present the demand is stronger and Ontario oil remains at 60c, but representatives of outside crushers are quoting as low as 58c. For boiled oil add 3c to these figures. Shipments f.o.b., Toronto, Hamilton, Guelph, London, net 30 days.

White Lead—All last year there was a strong demand for white lead, with prices which may be termed steady, though the market conditions were such that from time to time prices fluctuated several cents either way, but the ruling price all year was in the neighborhood of $7.65, until November, when the general depression was responsible for a decrease in prices to $6.25, which price still holds for pure. No. 1 is quoted at $6.

Red Lead—At present the demand is slowly reviving, but normal proportions have not yet been reached. The situation governing white lead since January, 1907, has had a similar effect on red lead. We continue to quote: Genuine, in 100-lb. kegs, $5.75; genuine, in 560-lb. casks, $5.25; No. 1, $5.00.

Petroleum—The same conditions govern the sale of this necessity, as noted during last year. During the summer months the demand for first grades drops off, and in the winter high grades sell best. Quotations are: Pratt's astral, 17½c; water white, 15c, and prime white, 13½c.

Shellac—The price of gum shellac has been lower during 1907 than for a period dating back to 1903. Last year prices held fairly steady up to November, around $2.90, when they were forced down to $2.25 for 5-gallon lots, as a result of the large American electrical companies suspending operations, owing to the depressions. At this time prices have not recovered, but operations are again under way in the States, and a substantial increase may overtake the market at any time, though supplies are such that it will probably be several weeks before prices change. Quotations for the week are: Pure white, in 5-gallon lots, $2.25 to $2.50; pure orange, $2 to $2.15; No. 1 orange, $1.90.

Trade Conditions in Western Canada

Perhaps the largest wholesale business in Western Canada during the last ten years of prosperity has been that in hardware and builders' supplies. The largest warehouses in Winnipeg are those of the wholesale hardware firms. the biggest and perhaps the most profitable turnover of goods has been theirs and very large amounts of capital are invested in this line of business. In a new country the hardware business is necessarily very large owing to the influx of immigrants who require complete new outfits of household supplies and who have an immense amount of building to do in order to make for themselves in the wilderness comfortable homes and farm buildings. As the immigration in Western Canada is growing larger year by year there is no reason to doubt that the hardware business of Western Canada will be greatly increased in the coming years. The Winnipeg wholesale houses have built for the future and have been well advised in doing so.

Nevertheless, it is true that during the last year the hardware business of Western Canada has suffered a temporary check. Like other lines of business, it has found its expansion checked owing to various causes, some local and some world-wide in their effects. An unfavorable season, a frosted crop and a world-wide financial panic combined to make difficulties for the business man and the hardware man suffered with the others. An unfavorable season for building operations adversely affected the sales of builders' supplies. Winnipeg building permits for 1907 were only half those of 1908 and the same story can be told of practically every city and town in the West. This necessarily meant a big reduction in the sales of builders' supplies. Then the general financial stringency induced caution on the part of the retailers and as there had been a general over-stocking in the days of great prosperity, the latter part of 1907 saw a big falling off in purchases by country stores as compared with former years. All conditions combined to check the expansion of business.

As a consequence the barb wire manufacturers who sent their representatives to Winnipeg last fall to book their annual orders for spring delivery were disappointed at their reception by the wholesale houses. The rolling mills and nail factories met with similar disappointments. There was not the demand for iron that there had been in other years; the wholesale houses were ready to take chances of getting their nails when required and refused to stock heavily at the lake ports. They were cautious in their purchases of builders' hardware and shelf goods. Buyers who had been accustomed to order liberally each year, invariably increasing their purchases each time a salesman called were now disposed to consider carefully the stocks on hand and to buy for immediate requirements only, taking chances about getting goods when required. In short, there was a general curtailment and the pessimists predicted "hard times."

But it is now quite evident that the pessimists were wrong. The prosperity of the West was built upon stable foundations and even the pessimists admit now that there is a big market to be supplied during the coming year, a market which, because of the light buying and general reduction of stocks during 1907 is prepared to absorb big quantities of goods during 1908.

The financial disturbances of the past year have done much to change the system of buying in the West. It has been the custom to buy in large quantities sufficient for several months or a year at a time, a custom surviving from the old days when transportation facilities were limited and it was difficult to get goods. With the establishment of big wholesale houses in Winnipeg and other Western centres and the growth of transportation facilities retailers have learned to order more frequently and for immediate requirements; and this tendency has been hastened by the financial troubles of the past year.

The tendency towards caution which has been induced by the troubles of the year 1907 will have most beneficial results and the outlook for the coming year's business is bright. In builders' supplies the turnover may not be so large as in 1906—in fact, it is not expected that it will be—but in all other lines there will undoubtedly be a return to a normal condition of affairs. It is already abundantly evident that this year's immigration is to break all previous records and the outfitting of so many new settlers means a big increase in the business of every wholesale house in Western Canada, while the addition to the population means a permanent addition to the market.

Moreover, the business of the West will henceforth be on a sounder basis. As explained elsewhere in this issue, there has been a widespread and thorough going curtailment of credit on the part of the retail trade and in many parts of the country a strictly cash system is now in operation. To those familiar with the evils of the credit system in the Western Provinces in recent years this means much. The hardware trade of the West have every reason to look forward to a year of prosperity.

CURRENT MARKET QUOTATIONS.

March 21, 1908

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

—What's the matter with a square deal for the dealer; what's the matter with the dealer making some money out of house paint?

Why not stop being a distributing agent for some paint manufacturer and be in truth a paint dealer and get the profit to which you, as an independent merchant, are entitled?

House Paint should be one of your most profitable lines—the demand is constant—but the whole trouble has been that, in most cases, there has been no money in it—for the dealer.

The margin of profit has been too small. You have been forced to buy higher and higher each year, and you have had to sell low.

You have worked hard all year, you and your clerks, talking, pushing, advertising some paint line, and when the season was over, after figuring up the extra time, floor space, rent, cost of doing business, etc., you found profits so small—well, sometimes you couldn't find them. Simply been distributing paint and "swapping dollars."

Perhaps, though, you did a big business. Sure. But who for? You or the other fellow? Whose bank account did you swell?

Good trade ought to mean good money; if it doesn't, it's bad business. You are in business to make money—to make dollars.

Our offer to the dealer is Paint-at-a-Profit—house paint that the dealer sells at a profit—every dollar's worth of business showing a good honest profit.

That's one reason why you never found a dealer who had once handled ROBERTSON'S PURE PREPARED PAINT that ever gave it up.

Quality?

The highest. Guaranteed absolutely. Anxious to have you test it against any other paint product on the Canadian market and let you be judge and jury.

That's another reason why if you once handle ROBERTSON'S PURE PREPARED PAINT you always handle it.

Now, there are a few agency points in Ontario still open.

If there is no Robertson Agency in your town, write us to-day for quotations and our Paint-at-a-Profit offer.

DO YOU KNOW TOGO-LAC? Write us about it. It has all the good qualities of all other high-grade varnish stains and has this great characteristic; it is held in suspension—always ready for use—needs no stirring—always uniform—does not settle, clog nor spread unevenly. A splendid money-making specialty for the dealer.

ARCTIC WALL FINISH. Wall paper is rapidly passing out of use—not only unfashionable but unhealthy. Arctic Wall Finish decorates in dainty tints and gives a soft, velvety finish. Made in many shades. Get prices for your trade.

We make a full line of Paints, Varnishes, Colors and Lead, for the dealer, and quote on a Paint-at-a-Profit basis.

Are You Quite Satisfied?

with the NET profits you've been making out of your furnace agency? Have you ever thought that your floor space, your time and your salesmanship might bring you more money were they applied to a better line of furnaces? This is a possibility well worth your attention. If you look into the matter you'll probably come to the conclusion that IT PAYS BETTER TO SELL

PEASE ECONOMY FURNACES

than any other kind.
Pease furnaces pay you a handsome profit on each sale. That profit is NET because there are no deductions to be made for time lost in attending to complaints and setting wrong things right. Your customer will never complain if you sell him a Pease furnace—because there's nothing to complain about. Nothing so eats into the profits of a furnace sale so much as exchanging and refixing this, that and the other part.

An Agency for
Pease Economy Furnaces
is an ideal one.

for you if you would sell furnaces which stay SOLD, giving your customer complete satisfaction, and bringing you good, continuous profits.

Now is the time to make a change for the better. Write us about it.

'Cross Counter Talk No. 3.

Overcoming Prejudice Against Prepared Paint

Customer—"I don't want anything more to do with prepared paint. I used some once and it was not at all satisfactory."

Reply—"That's not reasonable, sir, and I'll tell you why. Probably you have bought at least one suit of clothes in your lifetime that did not give you good service. Did you resolve, after that experience, to wear no more clothes? No! it made you careful to avoid the kind of clothes that gave poor service and the store that sold them to you, and to buy only good, standard clothing at a fair price from a reputable dealer. Now, it's no more reasonable to class all prepared paints with the one that gave you trouble. From good to bad there are varying degrees of quality in paint. Some are not worthy the name of paint. But when you use a well known, reputable paint like S. W. P., which has been used with success throughout this section of the country for years and years, you can be sure of getting as good results as it is possible to produce on your buildings."

If you are not an S-W. Agent write us today for interesting information.

Queen City Water White Oil

GIVES PERFECT LIGHT

FOR SALE BY DEALERS EVERYWHERE

There's One Name

in every line of manufacture that stands out against all the rest—that is synonymous with unquestioned supremacy. To carry the article having this prestige is not only to secure to yourself the added profits it makes possible, but to have the satisfaction of knowing that competition of quality cannot possibly reach you.

In the house decorator's mind, it is

The STAUNTON Line
SUPERIOR WALL PAPERS

that have achieved this distinction. It is a wise retailer who buys so well that his customers feel that they too have chosen with wisdom.

Go through your stock to-day—sort up—and send us an order that will bolster those weak places and bring your racks into such shape that you can meet without apology requests from customers to see wall-papers. A postal card with the pattern numbers will do—or we'll send you samples to choose from if desired.

PAINT PUBLICITY

Simply stocking up isn't going to sell goods. They must be well advertised. **Martin-Senour Paint** is a good seller because it is well advertised, and dealers who handle it become well advertised in consequence. Back of every dealer in **Martin-Senour Paint** is the powerful advertising machinery of the manufacturers who carry on

An Active Campaign

and help you to push sales. That's one reason why **Martin-Senour Paint** is such an attractive proposition for dealers. Its makers give it the right kind of paint publicity. Then there are other reasons. Write for our special proposition to agents and we will gladly explain our methods and show you how you can make money handling **Martin-Senour Paint.**

Are You In A Position To Supply A Big Demand For

ALABASTINE

As the months roll on the demand for Alabastine grows larger and larger, at the rate the orders are at present flowing in the sale of this popular product will reach a gigantic scale during the house-cleaning season. Are you in a position to reap a share of the profits resulting from this huge demand? Have you a complete line of Alabastine? Better fill in the gaps at once. Beware of the whiting and glue preparations, which are dead ones. The people want Alabastine—the sanitary, durable, gypsum rock wall coating—and it pays to give the people what they want.

Cloth Banners, Counter Show Cards, Tint Cards, Our Superb Catalogue, "Homes, Healthful and Beautiful," Handsome Two Sheet Posters and other literature liberally supplied to all who handle Alabastine. We will certainly do our part to bring the profitable Alabastine trade your way.

The Alabastine Co., Limited, - Paris, Ont.

Our Patent Metal Ends make our roofing easier and better to handle.

"Brantford" "Roofing"

doesn't stick in the roll. Comes complete with nails and cement, and clear instructions how to lay it. The neatness of its "get up" makes it a ready seller, especially when backed up with such superior quality. Write for samples and agency for your town.

Ramsay's Paints

To you Sir!

To every agent for Ramsay's Paints; we give you greeting on this annual spring opening of the Paint Trade for 1908. It comes in hopefully after the trying financial scare, and the times are big with opportunity. An enormous amount of money will be spent in new development work in Canada this year which will be felt in every district of the country. It is time then to be cheerful and look for increases along all lines of trade. We must think increase --we must talk increase, there must be increase. What was your paint trade in 1907? It can be increased in 1908. We will work with you if you want to prove it. We have helps that will bring business. Think it out. How much do you want to increase your business? Then write us, and we will work together. It means money for you.

And to you who have never handled Ramsay's Paints do you want a paint trade? Do you want to increase any paint trade you have? write us

A CATALOGUE FOR THE ASKING.

To the Man Who Our "C" brand

We wish to impress upon you

They are made from the best obtainable material known or used in the world by any maker for the purpose—Swedish Charcoal Steel Nail Rods.

These rods are manufactured in Sweden expressly for our requirements, from selected iron ores, by the Siemens-Martin steel process, using Charcoal as the fuel.

We use the old reliable and most natural process, in forging the nail from the end of the rod while it is at a forging heat. Most of our rivals use the cheaper method, known as the "cold-process," by which the nails are produced by mechanical pressure alone, without the use of heat; the head of the nail formed by being "jumped up" from a rod section smaller than the head. The natural tendency is to crystalize the material in the neck of the nail, and to make it more liable to break off at that vital point.

We believe ours to be the better method.

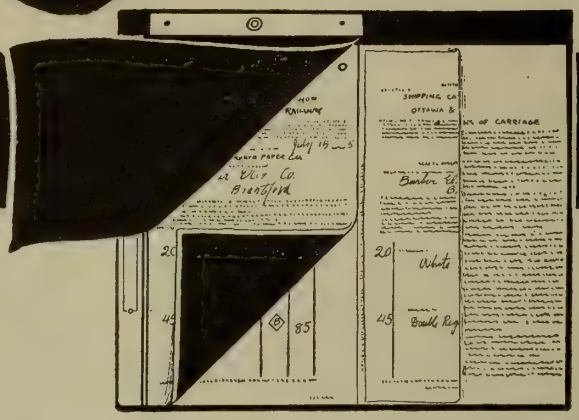
WRITE US TO-DAY FOR

Canada Horse Nail

Buys or Drives Horse Shoe Nails

some facts regarding them:

The patterns and proportions of our "C" Brand nails are the result of over forty years' experience in catering for the wants of the practical horseshoers in Canada. We have, however, carefully revised our standards and patterns during the past year, and our nails will now fulfil every requirement, and meet the claims made by any other rival maker.



We especially ask you to give our improved new taper Countersunk pattern a fair trial in competition with any nails produced or sold in Canada. They have the maximum strength with the minimum of material, and length for length are equal in count per pound to any. The graduated taper and fine hardened bevel points, enable them to be driven easily into the hardest hoofs. Their great toughness and durability enable the nails to hold the shoe firmly on under the most severe strain, until removal becomes necessary. No better horse nails are made in the world, and they have been "made in Canada" for over forty years.

ICE CREAM FREEZERS

"The Best Made"

BECAUSE

In practical use they are convenient, compact in size, use smallest amount of ice and salt, run easily, freeze quickly and produce smoothly frozen creams or desserts with little bother and less work.

They last longer because Pails are of selected white pine and have electric welded wire hoops guaranteed not to break or fall off; cans of heavy tinplate with drawn steel bottoms, the strongest and most durable can made. They have automatic twin scrapers which insure positive and continuous scraping of frozen cream from side of can. All inside parts are tinned, and outside parts galvanized.

Our line of Freezers comprises the largest variety made in any one factory. They embody all that is best and of intrinsic merit in a Freezer. Beside lines illustrated above we make large sizes with fly wheels or pulleys, and Machine Freezers, Ice Breakers, etc.

THEY ARE SOLD BY LEADING JOBBERS EVERYWHERE

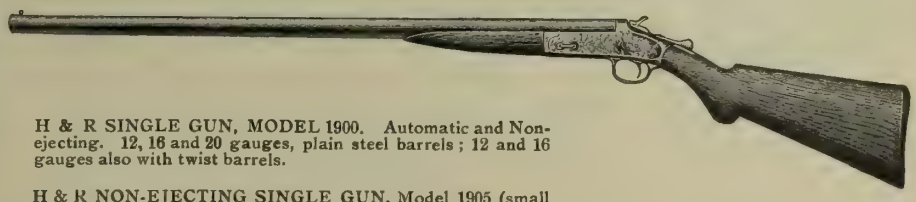
NORTH BROS. MFG. CO., PHILADELPHIA, Pa., U.S.A.

H&R GUNS AND REVOLVERS

are profitable articles for you to handle, Mr. Dealer, because of the extensive advertising and the absolute satisfaction they have given to discriminating purchasers for over thirty-five years.

We are constantly impressing upon the mind of the public—your customers—the superiority of H & R Guns and Revolvers—the simplicity of construction, accurate and reliable shooting qualities, perfect balance and beautiful finish.

Our catalogue tells about our full line and gives valuable selling points.

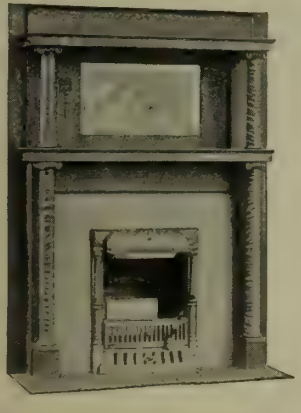


WRITE FOR IT.

Here is the New Target Grip

The realization of a long-felt want. Light, compact, durable—the first combination of a medium-priced revolver with a perfect full grip. The extension hard rubber stock affords a perfect grip. It is fitted to the frame, and by having the regular stocks (furnished extra) can be interchanged for pocket use.

Our new grip prevents slipping and twisting, insures a positively secure hold, because it fits the hand naturally, insuring confidence, which means a steadier aim and greater accuracy in shooting.



H & R SINGLE GUN, MODEL 1900. Automatic and Non-ejecting. 12, 16 and 20 gauges, plain steel barrels; 12 and 16 gauges also with twist barrels.

H & R NON-EJECTING SINGLE GUN, Model 1905 (small frame). 28 gauge, 44 and 45 calibers, plain steel barrels.

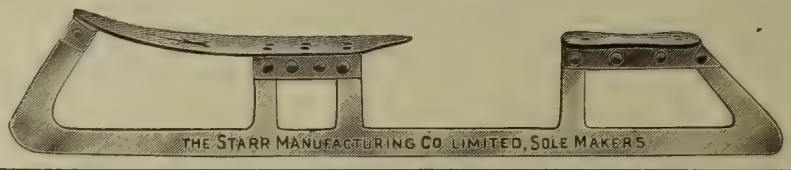
Cut 10—Outdoor Cabinet

Keep Your Gasolene Outdoors

STORE IT IN A BOWSER OUTDOOR CABINET

The Bowser will keep your property absolutely safe from gasolene fires and explosions because it keeps explosive gases from forming.



It will increase your profit on gasolene because it stops the usual loss of from 15 to 50 per cent. through evaporation, leakage and waste. It draws new trade because it is placed in front of the store where it continually advertises the fact to automobilists and others that you sell gasolene.

The Bowser costs you nothing because it pays for itself by its own saving of gasolene. Ask us to send Gasolene Catalog V. It's free.

S. F. Bowser & Company, Limited

66-68 Fraser Avenue, Toronto

If you have an old Bowser and want a new one, write for our liberal exchange offer.

Velox

This skate has been on the market for Two Seasons and although the season just passed has been an especially poor one for skating, the demand for the VELOX largely increased over that of previous year. It has more than fulfilled the claims made for it when introduced and we are prepared this year for a large demand. The skate is warranted and is used by leading players in league clubs.

Made in sizes 10" to 12" only. The design is copyrighted as is also the word "Velox." Infringers will be prosecuted. List Price, Per Pair, $6.00.

BRANDRAM-HENDERSON LIMITED

The PLANT and The PRODUCT

The New Plant.

A BIRD'S eye view from the architect's drawing of the new Corroding Plant, Paint and Dry Color Factory of Brandram-Henderson, Limited, now nearing completion at St. Louis de Mile End, Montreal, P. Q. The property on which these buildings are situated has a track frontage of about 1000 feet, directly on the main line of the C.P.R. The main building, 300 feet long, and 150 feet wide, is a massive structure of pressed brick and grey stone trimmings. It is practically fire-proof and has a frame of steel and floors of reinforced concrete.

The Main Product.

BRANDRAM'S B. B. Genuine White Lead corroded at these new works, is the standard of the market, unequalled for fineness, whiteness, body, covering capacity and durability. To thousands of people all over Canada, the word "Brandram" suggests White Lead, and the words "White Lead" mean Brandram's. The new works are constructed with facilities to produce 3000 tons of White Lead annually, with provision to increase when required.

To Cement and Concrete Users

"Esco" waterproofing is a colorless liquid which, when applied to exterior or interior surfaces of concrete walls, absolutely waterproofs them and prevents any absorption of water, also salts-proofs them, so they will not discolor or streak.

Cement building blocks treated with "Esco" can be so waterproofed that they will not absorb any moisture. Only one coating of "Esco" is necessary to get results, and one gallon covers one hundred and twenty-five feet of surface.

CAN WE HELP YOU ?

There are some hardware dealers living in this 20th Century who are still using 19th Century methods. They do not realize that Halifax is closer to Vancouver to-day than Montreal was to Toronto fifty years ago.

Twenty-five years ago it was a calamity for a merchant to lose a good clerk, for he knew it was practically impossible for him to get in touch with an experienced man. Such an idea as making a deal with a fellow hardware man a couple of hundred miles away either to buy a set of tinners' tools or to sell a second-hand counter or show case, did not seem practicable to even the most progressive hardware men. If a man wanted to sell his business he had to accept the highest price he could get from some one of his fellow townsmen, for no one else knew of the opportunity or had any means of finding out about it.

To-day the up-to-date dealer

Creates His Opportunities

He states his wants briefly in a "Hardware and Metal want ad." and in four days' time practically every hardware merchant, clerk, hardware manufacturer and traveler has read the proposition, and it seems reasonable that somewhere among the "blue noses" of the Maritimes or the pioneers of the boundless West someone will want just what he has to offer.

Every Hardware Merchant in Canada

can take advantage of our "want ad." page. Ask yourself.

Is there not some article I would be better without if I could get a fair price for it? If you cannot get a fair price for it by appealing to the trade throughout Canada you had better sell it for scrap.

We can help you but **you must take the first step.**

Surely it is worth 25c or 50c to find the one man in Canada whose wants dovetail into just what you have to offer.

Accuracy and Quality

We guarantee every "Diamond" Reamer to be accurate to size, and do this because each Reamer as it passes through the various operations of manufacture must conform to micrometer measurements, and is carefully inspected to see that it does.

Not only are "Diamond" Reamers absolutely accurate, but the use of selected steel, and our special process of hardening and tempering gives the greatest wearing and cutting quality.

Made in all regular styles and sizes from Carbon or "W & B." High Speed Steel.

New Departure
Ice Cream Freezer

As Used in Principal Cooking Schools

MR. BUYER—This is good - so good that Montreal took the entire output of our factory, season 1907, without any advertising outside of the Freezers themselves.

They are made entirely of metal.
Freeze with ⅓ the ice and salt.
Freeze twice as quick, and
Freeze with ¼ the labor

of the most up to date Freezer on the market to-day.

Think of It, Mr. Buyer!

it can be frozen with one packing. The reason is this: The Freezer is made in form of double cylinder, ice goes in one end, working around inner cylinder. Cream goes in the other end, **thus no salt or ice** can get mixed in cream.

Made in three popular sizes. Send at once for samples and prices.

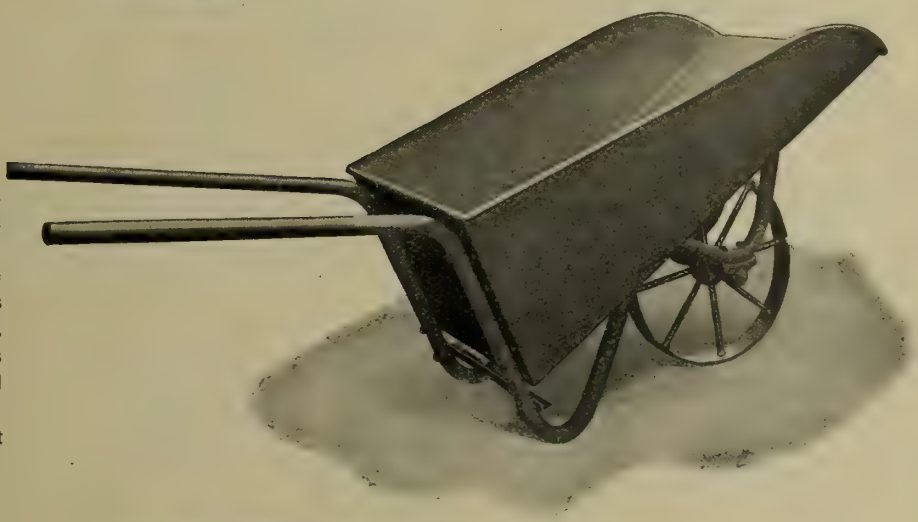
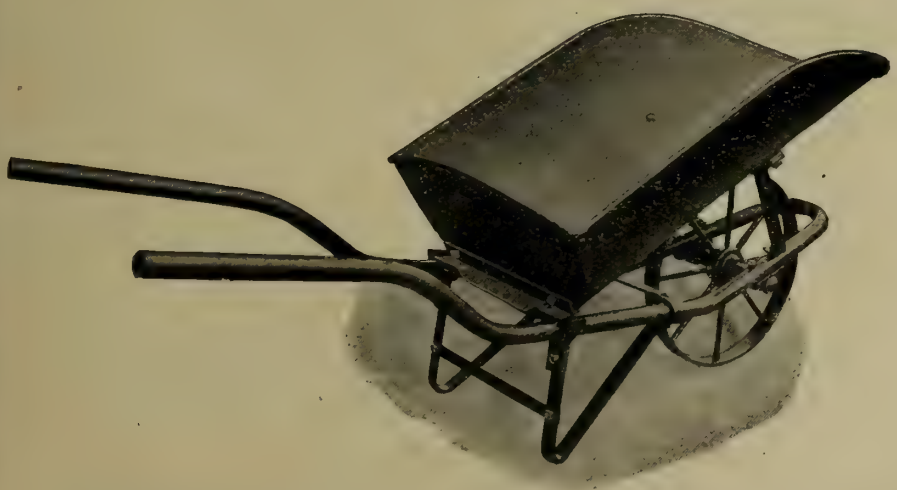
LANSING WHEELBARROWS

These Barrows are well known as the strongest made. Tubular and ordinary frames, extra strong wheels and trays. A very boon to **Contractors and Builders,** and, in fact, anyone needing this class of vehicle.





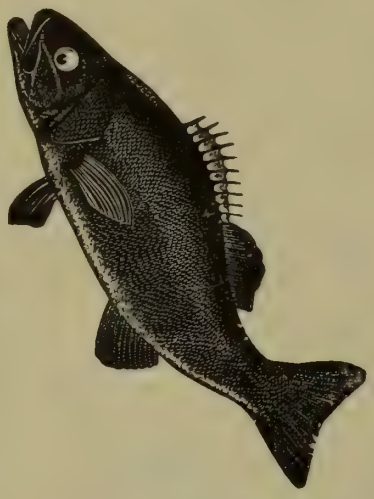
F--2 LANSING STEEL TRAY, with angle steel legs and braces, is an excellent barrow for mortar and wet concrete.

Tray measures 34 x 26 in. and is made of No. 16 specially prepared steel, reinforced at corners and strengthened at top by a 5-16 inch steel rod. Heavy steel wheel 16 in. in diameter. 1 3-4 x 5-16 in. tire and runs on a steel axle firmly held to underside of handles by heavy lugs. Capacity 4 cubic feet. Weight each, 76 lbs.

H--22 LANSING TABULAR, especially adapted for Cement and Concrete. It has stability and carries its large load easily and without strain on the arms for the reason that the bulk of the load is below wheel bearings and handles. On a large variety of work this barrow will be found a time and money saver.

Capacity, 5 cubic feet. Weight 85 lbs. each.

H--21 LANSING TUBULAR, one of the best barrows made for handling Brick, Crushed Stone, Sand, Gravel, Mortar or Cement where quick action is desired. Hangs just right for handling easily.



Capacity 4 cubic feet. Weight 80 lbs. each.

We illustrate herewith a few leaders, goods in almost every day demand. Write us for illustrated catalogue and full particulars of liberal trade terms.

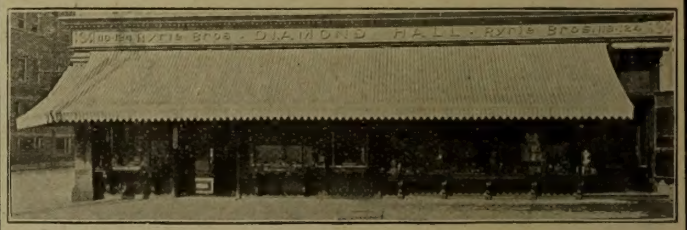
20th Century Rubs Increase Your Sales Enormously



The 20th Century Rub

is made of genuine chamois trimmings—not scrap—sewn in the right shape for the most effective cleaning, washing and polishing. Far cheaper than the whole skin—yet better for most work. Where you now sell one whole chamois skin, you can sell a hundred 20th Century Rubs.

Write Your Jobber, or
